Hello RFEnforcer: What a joke you are, your just as corrosive as on the other newsgroups, as you are here. But I must say you are constant.

Freebanders and the so called 10 meter squatters, are like apples and oranges. Two different things. I tried like all get out to hear Illegal operations on 10 meters all I heard was Spanish stations not using call signs. The conversations on news.rec.radio.misc also don't like you, you must be a real jewel, he he he!

Your just another weak dick whiner.

Jay at jay123a@qnet.com .... In the Great Mojave Desert, just down the road ah ways from the fillin station.

I have this radio and have a different experience. The radio has a backup power system built in that provides about 3 days worth of power in order to hold the programmed settings -- the owners manual speaks of this feature. When I travel out of town, I park the car at the airport parking lot and remove the detachable head. I have been gone as many as 5 continuous days, returned to the car and replaced the head, and it lit up with my previous settings.

On the other hand, if you neglect to power off the unit via the on/off switch, and then turn the vehicle ignition off, the next time you power up the unit it will reset to a default setting. (The default is AM mode, ch 9, w/no extra channels, etc.) So, needless to say, you don't want to leave your unit on when you switch off the ignition.

Dale.

Hey dick,

Let's take a good look at your "facts" here. Seems that you want to dredge up old BS that has already been fought over, and was done with. The most recent thing that you brought up was from a year and a half ago!

> http://www.fcc.gov/cgi-bin/AT-fcc_websearch.cgi

> http://www.fcc.gov/Bureaus/Compliance/News_Releases/1998/nrci8009.txt

1997 to 98 taxi cab busts in New York..

Old news.

> http://www.fcc.gov/cib/News_Releases/nrci8009.html

April 27, 1998 ... Looks like the FCC was busy in '98.

Still, this is just another copy of the above.

> http://www.fcc.gov/Daily_Releases/Daily_Business/1999/db990322/da990540.txt

A rehearing stemming from a problem in March of 1998. That scares me.

> http://www.fcc.gov/Bureaus/Compliance/Orders/1997/da971786.txt

1997... Boyee... I better get rid of all my stuff...

> http://www.fcc.gov/Bureaus/Miscellaneous/News_Releases/nrmc4089.txt

1994!!! Boy, that's a real threat!

> http://www.fcc.gov/cib/Orders/da971786.html

1997. At least that is a little more recent!

> HO HO HO! NOW WHERE WILL YOU HIDE CB SCUMBAGS?

Oh I am sure there are some guys on 10 meters, I haven't hear any. The roger beep, echo, and sound efects, I hear them all the time on the 2 meters repeaters from Los Angles. And yep I spin the dial quit a bit on 10, I have yet to heat any CB type transmissions. A lot Spanish guys are out there.

> very noisy.

I have this radio and have found this to be true! I run it with most of the mods (except the Q33 modulation limiter) using a Wilson 5000 mag-mount and a D104-M6B. When I power up during the daylight in AM mode, the SRF jumps up to about a 7 or 8. Sometimes it goes all the way to 10 and just stays there. I can still receive pretty good, signals seem to come in strong. But, the SRF is almost always pegged. If I hit the LOC button, the SRF drops to nothing, but I think the signals coming in are much lower and my receive is just not that good with that setting. If I am chatting with someone nearby, they come in just fine. Needless to say, I run with the LOC off most of the time and have the squelch turned way up.

I looked in to applying Lou Franklin's channel guard, but was told that it would not work with this radio. Does anyone know differently?? This is a GREAT radio. I guess I have convinced myself that maybe the SRF meter is just overly sensitive, and now I just tend to ignore it. BTW, SWR is 1.1 on ch 1 and 40, 1.0 on ch 19.

Dale.

Black people do not use the word NIGGER.

They use a butchered version..... "Nigga"

Their is a difference.

Nigga would be equated to a white person calling another white guy a "wood"...

Peckerwood is a word that black racist people usually reserve to call white people they don't like, but it is "OK" for a white to call another white a "Wood".

I am not saying that I agree with it, but that is the nature of the game.

25. Cobra 148GTL help needed

Newsgroup: rec.radio.cb
Date: 1999-10-02 00:00:00 UTC
From: Ben Olson <dedcow@nwlink.com>
Message-ID: <37F6CEFA.EA1D08FD@nwlink.com>
Source record: 4474

hello readers, i was wondering how you tell if a Cobra 148GTL was made by uniden or not? i have an older 148 and would really like to know who really made it. and is there a way to get about 8-10 watts deadkey out of one of these things (and who can do it and make it sound better/clearer)
it allready has the extra chans (never use them, never will) and 1 more thing, can anything be done to filter the incoming signals more? the anl/nb does not do much on my 148. thanks all.

#1 power out is directly proportionate to what you want to spend. The more $, the more wattage.
#2 Worldwide when conditions are right but you do not need a linear for this.
#3 A couple hundred can get you into a reliable box.
#4 Pretty much connect your radio to your box and your box to your antenna. Assuming you are speaking strictly mobile, hook it to your battery directly.(do not even bother suggesting inline fuses or connecting to solenoid.)

Not with a lower deadkey.

The trick to burning up a radio is to keep the average power output high...

If you have a low carrier, the average power that the "final" has to put out
is low, but the PEP value can be high..... The PEP is an instantaneous
value, whereas the carrier is "all the time".

Hope that helps.

> valid grant from the federal government

A valid CB license only gave an individual permission to use a certain segment of bandwidth according to various rules set forth by the government. It by no means gave a person the right to damage the real property of another while putting those very governmentally supplied and enforced rules in practice.

A perfectly silly example would be if two people were standing next to each other at a pond fishing. Both of these people have valid Fishing Licenses. Both of these individuals also have the legal right to engage in a normal attempt to catch fish according to the terms of the fishing license. While doing this, one fisherman crosses the line of the other, hence losing the other parties $10.00 fishing lure. Both parties were acting within the legal parameters of a Fishing License, however one of them clearly caused damages to the other. Regardless of any licenses, or to whom they are issued, this situation now falls under the Common Law category of "Property", which has a completely different legal result.

The guy who crossed the fishing line would have to pay.....Just like the owner of the CB would have to pay the individual for the financial damages incurred by him as a result of the CB. Although, you are correct by stating that no one in their right mind would ever pursue such a course of action for something so minor, however there are those out in the world who'd love to make a name for themselves for exposing such frivolities.

Hey.... this is new information to me!! Either I overlooked this when I checked into it, or CBC has added 79-290 info within the past month or two. I had a tech check out the unit when I recieved it, I asked him about it and he said that it would not work. He may have been misinformed.

Glad you caught this! I will check into this ASAP and order if all is OK. I'll slame the thing in quickly and report back with results. Thanks Russticle.

Well, there you have it.

It's always a good idea to power down radios with CPUs in them
by turning them off--then disconnecting them from the power source.
Turn them back on the opposite way: connect them to a source of
power, make sure that source of power is on, then turn the radio on.
With the 79-290, Midland builds in an incentive to do it that way.

None of them do, but that would be a feature that would
actually make the 2510 better than a 2950.

> i thought we were
> talking about ten meters only rigs.

We are.

> the only one i know about with the pll
> tones is the 2600.

2600s don't have PLL tones stock.

> i use my 2510 on ssb only and never use AM so thats not a
> concern.

Then you should know for a fact that as CBers are
concerned there's nothing that the Chipswitch does
that really makes the radio stand out in the group.

> here where i live were all near three major freeways and the folks
> with 2950's dont hear anything when the truckers with class c boxes come thru
> ripping stuff up.

That's crap. The 2950 receiver isn't as selective
as the 2510, but it's not like you're going to hear
people on the 2510 that you're not going to hear on
the 2950. I've performed experiments that prove it.
I've compared the 2950 to all the radios that are
supposed to have "hot" receivers. None are more
sensitive, most are more selective--but that's it.

> same situation when the dx is high and all the signals from
> 27.025 are 30 over 9. the radios with loose recives like the 2950 and other
> exports just dont cut it. if i was living in the boon docks by myself with no
> dx then a 2950 would suit me fine but thats not a real world scenario.

That's just more crap. When the skip is in like
that it doesn't matter what radio you're using--
the receiver will be burried in it.

I've used 2950s for 10 years. They aren't the
most selective receiver, and there are several
receiver stages where they should have used FETs
rather than bipolars so the no-signal noise floor
is higher than it should be, but they aren't THAT
bad. There are a few cheap mods that improve the
receive performance by about 10%. Having someone
who's patient and has good signal to noise ratio
measurement equipment align it helps quite a bit
too. Like I said, I've done tests that prove it.
Some of the seemingly very quiet receivers won't
hear fringe signals as well as a properly modified
and aligned 2950. What some see as superior
selectivity is just a lack of sensitivity.

In any case, we're both getting off the point.
The Chipswitch certainly is not the reason why
the 2510 types are more selective than the 2950.
It's a wash. The receiver selectivity is countered
by its lousy AM transmit performance. At best,
the 2510s AM transmitter is the equal of the 2950s
receiver. In other words, with the proper mods
and tuning, the 2510 AM transmitter is okay just
like the 2950 receiver. The Chipswitch doesn't
improve the 2510s AM transmit performance. It
doesn't give the 2510 PLL capability either. It
gives the 2510 some memory locations and the
ability to scan and search. Those are the useful
features, but the 2950 already has those features.
The rest is basically useless fluff.

The bottom line is that a 2510 with a Chipswitch
is not a better value than the 2950, therefore
it's not a better choice.

Remember, I did admit that if SSB is all you do,
than a stock 2510 (Lincoln) may be the better
choice. Personally, I stick with the 2950, but
alot of people I know, mostly hams, prefer the
2510 types. That's why there's chocolate and
vanilla. A radio choice always has to be based
on what the person is primarily using the radio
for. There is no one "best for everything" radio.
There are always people asking that, and I'll

try to answer it, but there will always be areas
of the radios I recommend that can be nit-picked.
The same goes for anyone else's choices.

Source record: 4511

Okay, I asked about putting a ant in my attic early. I was told about using a dipole which I could do.

But I have a old Radio Shack Magnetic mount ant. . Could I take the magnet off of it and use it. I'm wanting to get at least a 14 to 20 mile range out of it. Would it work or should I put some ground radials on it.

I have plans for a ham ant. which is alomst the same idea except it doesn't have the loading coil. It has 45 degree radials (4 of them), WOuld that work w/ mine seeing that it has the loading coils..

Yes you can do it, but not really worth the trouble because you could sell both of the Texas stars and just buy a bigger Texas star or whatever you want. the reason the amp in the house runs hotter is probably because your base antenna might not have a good match or the base radio might have the carrier set higher than the mobile.

Well, I was really trying to be somewhat polite, but since you asked.

What it really sounds like is "YOU keyed up WITH intent to do do HARM and or DAMAGE to another persons property because YOU did not like what he said to you" ILLEGAL in my book.

That puts you in the same category as all the CB'ers you like to scream at about running illegal power. Therefore you have no right to preach to anyone about what is legal or illegal, and every time you do it just shows your ignorance.

I am looking for a decent radio to take hunting with, like to have max range capabilities, I have been looking at the Cobra 45wxst, suggested by a friend.
I would appreciate any feedback, thanks in advance

80. Amount of current required for amplifier (was: Re: Question?)

>You could probably get away with between 150-200 watts if its running at
>13.5-14 volts

That's pushing it, though. The last thing you want to do is starve an amplifier. I'd recommend at least 30 amps. The Texas Star 250 comes stock with a 30-amp fuse (at least it used to), so this would be a good indication of the amount of current required. Astron makes a quality 35-amp power supply which would be perfect for this application.

Of course, this advice is intended solely for licensed amateurs who would use such a setup on the 10-meter ham band.

Many of the poorer regions use CB radios to provide primary communications since these areas have no telephone service.

>meter repeater around has them?

"Courtesy tones" serve a useful purpose for repeater operations. Unlike simplex (CB) transmissions, there is no dropped carrier to signify the party has completed his transmission. If the transmitting station has a clean signal into the repeater, it can be impossible to tell when the party has finished his transmission unless a courtesy tone is used.

Exactly. In the 25 or so years that mainstream America has been familiar with CB, moral values and society in general has declined markedly. Everything is less civilized and more hostile now: CB radio, ham radio, driving habits, behavior in public, etc. Expect this trend to get worse in coming years. Eventually, you will either need to "pack heat" or you will be a crime victim. This is already the case in a growing number of large American cities.

Me thinks we're going to get both. Within the past six months, several NALs have been levied against hams who operate illegally in the freeband.

Illegal is illegal. It is just as much of a violation to transmit on 27.555 as it is for an unlicensed operator to transmit on 28.085.

oh, and one other thing.
if you live in iowa because you don't like the crime in new york, you would stay out of new york wouldn't you?
if it's such a crime to be on the free-band, you would NEVER go there would you?
if you don't go there, don't put your brown nose there to bother us.
if you monitor there and wanted us out, and were sucessful, then all you would hear is dead air there.
a sane man wouldn't keep monitoring for long and leave.
you would probably be the like the maytag repair man and stay to paTROLL those freqs anyway.

there is NO law that says that i CAN'T buy, own, or sell, "FOR EXPORT USE OR
SALE" an 11 / 10 meter radio or amp.
the law only says that i can't USE them.
if i had my house FULL of these units, i could invite an fcc inspection of my
house and they would leave empty handed because they would not find one in
operation or offered for sale in the U.S. at the time of their inspection.

Sounds like this guy is a CB failure.I guess he couldn't get anyone to respond to him on Super Bowl. When he bought his ham ticket (he doesn't sound smart enough to pass the test) he now feels superior.So he gets on the net (he still isn't able to get out on the CB freqs.) to down the very thing he tried so hard to achieve. Get on the porch pup and lick your dish, you're still not able to get in the middle of the street with the big dogs.

no, the only message that i'm trying to put across
is that no one can get a message across on this forum without assholes like the
RF police spamming and damning every question in here that doesn't represent
pure cb.
we can't even do it in semefore because of the GLARE FROM YOUR BADGE, DEPUTY.
sometimes, it takes a little profanity to get you to SHUT THE FUCK UP AND
LISTEN!!!
you and the other RF police should have your own ng so that you can post with
someone that agrees with you because no one here wants to hear from you.

You are correct with regards to radios but totally in the wrong where amplifiers are concerned.

If you are caught with RF amplifier(s) in your possession which have the ability to operate on the 11-meter band and you do not hold a valid amateur radio license, you will be assumed to have used the amplifier(s) if there is ANY other evidence of it's use.

Do you know what "de facto" means? As in "possession of the amplifier is considered de facto evidence of it's use?" If not, you had better brush up on your terminology (and your knowledge of Part 95 as well.)

Hello Train: Yep your right there. I have read to many postings that people are complaining about the MaCo V5/8 assembly and matching. I have never assembled one. I bought one from Bills 2 Way back in February of this year. But in a few days I'll be putting my MaCo V5/8 together and matching it up. Already have 2 Penetrator 500's and my New Design 5/8, that's a Penetrator 500 kind of look a like. But uses a few different features to improve the mechanical strength, and a wider bandwidth, and is adjustable as to what frequency you want.

I'll let ya know how it goes, ah!

Jay in the Mojave

RE:Newbie Unfamiliar with linear amplifiers, any help?
ask yourself this question:
AS A NEWBIE, WILL I EVER GET A STRAIGHT ANSWER OUT OF RFENFORCER?

THE ANSWER IS: PRINT THIS ONE UP BECAUSE IT'LL BE THE LAST ONE YOU'LL EVER
GET!!!
he is right, amps are illegal and there are stiff penalties for their use.
in the future, expect ANY post about amps, (should you choose to use one),
to be peppered with a bunch of bullshit, off the subject / wall crap about the
legalaties of it. if you choose to use an amp, you do so at your own risk but
don't let him or anybody snow/scare you. YOU make YOUR OWN decisions.
good luck.
jeff

A good ham 10 meter Yagi or triband Yagi is the ticket for skip,I use a high gain TH6DXX,4 elements on 10 meters on a 24'boom.A balun helps with the TVI and is standard equipment on most Yagis.Any 10M beam can be modified(lengthened)for 11,just get 4 or 5 elements and the longest boom,not a shortened boom like a lot of the CB fakes.These will blow away an A99.

Wouldn't it be much cheaper to go to your local Home Depot and get a UL listed 10' ground rod and associated hardware? My radio shack charges me X-tra shipping for long items. As far as that goes why don't you go all the way and follow the national electrical code as far as jumpering the antenna grounding electrode to the electrical service grounding electrode? as per NEC 810-21 (f) (1) and 810-21 (j)?? Illegally installed electrical systems can be used by an insurance company to deny a claim.

Interesting.... I have the same amplifier.
I thought it was a homebream amp that someone put General linear system on it.
So this was a true production amplifier. Mine is integrated into a night stand.
We call it the furniture amplifier. It is ugly!! but will cook an Antron A99.

I will agree with most of what you said except using Copper as a price guide.

You can not use them in that aspect because they buy in such Huge quantities that they are able to get their stuff at a lot lower price than the average retail shop. For example, WalMart sells the Uniden Pro-510XL at about $38-$40, and most distributors prices can't even sell them for what they are retailing them out because they buy them by the truck load, and most retail shops can not afford to do that. Sure, a lot of the bigger truck stops like Petro, Union 76 and so on have cheaper prices for two reasons, they deal a lot in re-furbished units and they buy them a truck load at a time, and then distribute them to their stores.
Sure Copper has good prices, but you have to be able to see what you will be spending in the end when it is finally able to be put in your vehicle.

From: Jay <jay123a@qnet.com>
Message-ID: <37F77F3D.7D936EE4@qnet.com>
Source record: 4604

Hello Roger: Its not all that easy to go out and home-brew a 1/2 or 5/8 wavelength antenna, and have the performance results that the store bought antennas have. I tell this to you from years of experience and wanting to sledge hammer a few home-brew antennas.

The store bought CB Base Antennas are usually designed by antenna engineers, and have been tested on a antenna range. The MaCa V5/8 is great 5/8 wavelength ground plane antenna, its cost is around 60 to 70 dollars. As a guy walking off the street, the aluminum tubing will cost more than that to get close to the original MaCo V5/8 antenna assembly.
Then there is the vertical element insulator, mast mounting considerations, and of course matching the impedance from the 50 ohm coax to the 5/8 antenna. Which will have a SWR of about 21 to 1, without a impedance matching system.

I would suggest to purchase a MaCo V5/8, assembly it and use it. Then if your bent to improve it, experiment on it. Buying the MaCo V5/8 just for parts is a wise and inexpensive move. Please let me know how you make out here.

Jay in the Mojave

My My My Bill,
It must be nice have such a fan club. I might have to
get another license and join in on all the fun. I've
pretty much conquered the cb fan club, I guess it's
time to get a license again and have some fun on 2 mtr.

Man I don't know Brian,
Flipping those burgers at McD's must have
really weakened your wrist. The weight of
a 9v. batt is to much for you to lift? a
whole what, 20 to 30 grams? Man I'm sure
you're county has a program for helping
out needy people with injuries such as
yours. As far as replacing it ...I would
think that must people go through one about
one every year or two.
One more thing ..... I leave mine on the
bench and just grip it or press down to
transmit, why do you have to hold your mic?

The Landshark

P.S. It is nice to se that your still with us though.

Hello Skipmaster 725: I would suggest putting up a MaCo V5/8, this is a 5/8 wavelength ground plane antenna. I have heard to many stories that the A99 was replaced with a MaCo V5/8 and a noticable decrease in TVI resulted. I would also ground the radio to a good ground rod or water pipe.

Funny...

We can say the same things about your ethnic background?

But, rec.radio.cb is not a place for a showdown on racism, is it?

Their is a difference.... Call a black man a Nigger, and I seriously doubt that you would walk away in the same manner that you walked up...

Call him "Your Nigga", and if he likes you, you would be a good friend.

Kind of like the difference between a "Vato" and a "Vato"...

Border language (and the English raping of the hispanic language) makes a Vato someone who is your friend..... On par with a Nigga...

However, call a self respecting Mexican a Vato, and it would be along the same lines as calling a black man a Nigger.

Neither one is a very good term to know.

Just remember, if you want to be an asshole, people can do the same to you, Senor Lopez!

Excellent base station mic for sale..
This mic was made for TRAM Radio Corp.
by Turner and looks just like the Turner SSB+2
but is all black and printed on the mic in RED is
the word TRAM...currently wired for a Tram 4 pin plug
but of course will work on any radio...
This mic is just extra to my needs ..
make offer if interested.

>Coming from the holder of the FCC assigned CB call KAXN-9546 I can
>assure you that it when downhill AFTER licensing ceased to exist....
>
>

Thats merely a coincedence..Technology changed and society as a hole went down hill at that time..Stopping the issuing of a license had nothing to do with it..You gotta still have tags and a license to drive and people are crazier now than ever.And thats in broad daylight where everyone can see them..So you can imagine how they are going to act hiding behind a mike invisible

I hope I did`nt brain my damage.

161. Packet Radio on 11 MTRS Help

Newsgroup: rec.radio.cb
Date: 1999-10-03 00:00:00 UTC
From: tony <tony@packet98.freeserve.co.uk>
Message-ID: <7t88jj$1gq$1@news7.svr.pol.co.uk>
Source record: 4631

Hi guys,
I wonder if any stations out there use or monitor packet radio out there on 11 mtrs?
over here in Europe its quite busy on the frequencies of 26.840,830 and 810 LSB with legal packet on the frequencies of 27.235 245 F.M.
the baud rate is 1200 unusaual for H.F. nut CB ers over this way are hardly conventional.....
recent developments include the proposal for legal packet radio in the UK.....
Its already legal in Germany Holland and Denmark with a following all over Europe.Also I have monitored stations in Russia comming on-line and I wondered if a "Global" network would be a possibility.
With e-mail and the web being used as gateways, as in Ham radio and the progress of the sunspot cycle some contacts with the US would, I think be possible if there were stations to contact....
Do you know of any????

I am looking for unusual stations on CB packet.
Recently monitored on Sunday 3rd October was

SF9PJC*>**CQ** [UI,P]:
<TE 1.20> 1 SF9PJC & BBS & DIGI, FINLAND, Lapland 1 EU 1

on 27.235 F.M.
also
RUS000-8 a russian bbs of uknown location.

Please send me any stations you monitor from "far afield" especially if their beacons contain PO-boxes, web-sites or e-mails........as I am interested in QSL-ing these stations and gain information about the "NETWORK".....
Thanks for your time..
Please visit the web-site at
WWW.BCBC.U-NET.COM
for our progress.
All the best for the coming season.

Tony.

I must admit that regardless of my stance against illegal CB operations, I do enjoy an occasional monitoring of Channel 6. These operators are very "colorful" (no pun intended), with a language and an operating procedure all their own. On most days, they give signals as strong as local AM broadcast stations into into my cheap SW portable with just its whip antenna.

Who's "on top" of The Bowl in your neighborhood? The strongest signal right now seems to be coming from "Jack Johnson."

Hello & good afternoon Jay,
Hey, I was always told not to ground it to water pipes.
That if you had spurious emissions that it could radiate
through you're house as well as others. I always use a ground
rod, placed close to a gutter down spout.

Right. If you're using Radio Shack as a supplier, pay the extra few bucks and go for the UL-listed, 8-foot ground rod. The cheaper 4-footer is essentially worthless. Don't be penny-wise and lightning foolish. The shack you save will be your own.

Hi.
I'm looking for the Voyager CB radios web site and I can't find it.
If you know it please tell me.
Thank you.
Kelmer.

185. Linear Drive Questions

Newsgroup: rec.radio.cb
Date: 1999-10-03 00:00:00 UTC
From: Ben Olson <dedcow@nwlink.com>
Message-ID: <37F7072E.F571D57B@nwlink.com>
Source record: 4655

i was wondering if it would be semi-safe to put 25watts PEP to an HD linear, rated at 10watt deadkey input. i have no idea what the CB deadkeys, but it has a 1969 final in it, the unit in question is a Uniden PC66XL that has been really modified. and the amp i want to mate the 66 to is a Cobra 350XL from coaxkid (palomar blue face type, HD class AB1) anybody know if i would be safe to run this combo, or if i would kill it?

186. Re: Newbie Unfamiliar with linear amplifiers, any help?

I hope you don't mean that an inline fuse should not be placed between the
battery and the firewall. This is basic safety!

What you said made me wonder. On his site,
http://www.cbcintl.com/CG_Hookup_Info.htm
He does list where to go in the radio for the 79-290. (misc ssb
section) I dont have a 290 (yet), but was planning to get one & the
guard as well. What was told that wouldn't allow the channel guard to
work?

Since that amp was probably built on someone's kitchen table, there is no way of knowing here if it will handle 10 or 100. They are all different, based upon the quality of construction. Just remember that when you are dealing with illegally manufactured or modified equipment, there aren't any construction standards to meet, so all bets are off.

I never understood why these rados were bought by people that just get them and decide that they "need"to add channels. If they bought this kind of radio tyhey had to know that there were radios out there(Golly.....even a few Galaxy's) that come with the channels already there. I have NEVER been one for adding things to the radio that didn't come from the factory. The only so called channel kit I have ever seen that was worth it's weight and freight was the old "Digi-Scan" and those are no longer being made. I suggest if you want more channels, pick up a radio that has them in it from the factory and hqave less trouble in you radio life.

Hi Bill,
Use RG-8X coax instead of RG-8 and it will still handle plenty of power.
You should use a standard ball and spring mount with around 18ft plus several extra inches of coax. This way allows you to cut it back to around 18ft for a good match if needed. Coax length doesn't matter if your antenna is a 50 ohm load, but the 102" whip is not, so your coax becomes part of the antenna and therefore coax length DOES make a difference. Good luck Gordon

>the bottom line is that all people care about is price. most have there own local tech thats a favorite.

Not all people

> i dont need to have a mail order guy working on my radio. its been my experience that cb repair men are similar to auto mechanics in the way the charge and do business.

Alot of techs or so called techs do rip people off, but there are a few good ones out there. They just usually don't spam on the NG.

> all i want is a place to buy a radio that i'm already familiar with and then i'll have my guy work on it. after all theres no way to check a repairmans work quality if he's half way across the country. buy your radios from who ever has the cheapest price but never let somebody you dont know or trust work on your rig.

Buy your radio from a local shop that you know and trust that will give you comparable brices. A Copper radio or the like that is defective will end up costing you much more time and money than had you bought it locally anyway. On the other hand, you can use Copper as a price guide....keeps retailer honest and you in the know. Your Galaxy 99 may be $319.99 at copper, plus $15-20 in shipping. Therefore, $349 from a local shop that will stand behind the radio is a better deal, especially if you end up sending that mail order radio back.

Now Now Toll, Let's not confuse lack of verbal skills with meanings.

When they say "Gub-mint", they mean Government.

When they "Fiddy Dolla", they mean fifty dollars.

When they say "Am-boo-lanz", they mean ambulance.

When they say "Axe somebody", they mean ask somebody.

And last but not least, when they say "Niggaz", they mean niggers.

To suggest otherwise is to engage in politically correct "new-speak".

Sorry Toll, but "fax iz fax" (just a little Ebonics thrown in for your
reading pleasure).

Hear! Hear! I agree 100%! Personally, I remember the hobby the way
it was back in the 70's. The FCC even then didn't enforce heavily, but they
at least tried to provide some sort of enforcement. 1979 came along, and that
seems to be when the FCC turned their back on the service. Now there's a
proliferation of illegal noisemakers ("Roger" beeps, echo and reverb effects,
etc), high power stations and illegally modified radios. It's about time the
FCC stepped in and started cleaning up the spectrum!

>I am currently running a homebrew 1/4 ground plane antenna that works well,
>but would prefer a 1/2 or 5/8 antenna to acheive better results. Anybody
>have some useable plans for such a antenna?

I will repost a method of matching the 5/8 wave antenna.

Take two short pieces of coax, Call them B & D.
50 ohm is fine.

The reason I used B & D is because the antenna
is A and the feedline coax would be C.

Imagine the hookup of A,B,C,D, left to right.
(See picture below)

B in feet =122/MHZ

D in feet =30/MHZ

A in feet = 585/MHZ

C = any length

################

Form an intersection of B,C &D. Connect the center conductors
of all three. Then connect the shields of all three at the same
intersection. It should now look like the letter T with the feedline
being vertical.

Take the right side of D and short the center and outer conductor
together.

Take the left center conductor of B and connect it to the antenna.
Then connect the left shield of B to the *ground radials on the
antenna.

* Three or four nine foot sections

Cross fingers.

You apparently haven't been to many truck stops. These items are not in a hidden back room or under the sales counter out of sight. They are clearly and prominently displayed in glass sales cases. Of course, the current FCC initiative may serve to drive these items into those hidden back stock rooms and such, but that's better than what's going on now, and those who engage in the black market trade of these items WILL be caught.

They can be prohibited for sale in the US because they operate on the 11 meter band and are not type-accepted for use in the US on 11 meters. You may also want to review the type acceptance requirements for radios sold in the US. I'm of the (possibly mistaken) impression that no radio may be made commercially available in the US without FCC type acceptance. Hams are permitted to operate non-type-accepted radios.

Well John, I too have run clean CB for over 22 years. Congratulations on your Tech ticket. It's the first step in enjoying a wonderful hobby. Been licensed about 2 1/2 years myself and really enjoy it. I'm not as active in CB as I used to be, listen more than I talk (CB AND Ham), but I'm always out there. Maybe I'll catch on sometime. I see you're in 2-land. So am I. Work any repeaters in upstate NY?

The radio can Power up as a 10 meter radio or as a extened band CB depending on the buttons you hold down during power on. Mine had a fair recieve as far as CB radio selectivity goes. Where it lacked was from QRN or electrical noise rejection
all installs I did with that radio were susceptable to ignition, CPU noise etc...most cases it was very bad. Othere than that, the little dual final radio really talked.

Do one of two things:
1. Leave the mag mount antenna on the car, and park it in the attic, or
2. Cut a dipole out of almost any conductive material, and feed it through a 1:1 balun with RG 8 or RG 58. Cut the dipole long and allow for a resonant point below the CB band, and this will permit you room for error and to later trim it to tune. Using an antenna analyzer or swr meter, calculate the resonant frequency, and do any trimming/shortening needed to get it to resonance on your most commonly used CB channel.

A dipole strung flat 0ut will be rather directional. As you allow the ends to fall, the antenna will become increasingly omnidirectional.

I have a co-worker of mine that won a 959 in an raffle, it's a nice radio
all by itself.

I have a question. I have just ordered the Midland 79-290 for my car and plan on installing it in the dash board. My question is this: What affect will it have if I attach a cigarette plug to the power cord and plug it in that way over having it wired directly to my battery? I have a new car and I want to limit what I attach to the battery and run through the firewall. Will I still get the correct voltage (13.8)?

Allow me to quote a paragraph from
http://www.cbcintl.com/CG_Hookup_Info.htm :

The CHANNEL GUARD filters are a very effective way to stop one of the
biggest problems with CB radios: splash, splatter, or ï¿½bleedoverï¿½ from
other channels. Our HF versions use two special high-Q crystals (7.8
MHz or 10.695 MHz) in series on a small PC board, which is installed
at the proper circuit point in the receiverï¿½s IF stages. They work by
narrowing the ï¿½skirtï¿½ selectivity around the center of the radioï¿½s IF
passband. The filter is generally installed in place of an existing IF
coupling capacitor, typically a 2-5pF ceramic disk type.

It's supposed to increase the selectivity of the radio on receive &
prevent bleedover. Haven't heard bad about it.

I have a quick disconnect end on my power cord for my Galaxy 66 and my
Uniden 76XL, I can use the CB power posts or the cigarette lighter in our
trucks at work. You will get the power you need fine, although you do
risk the chance of a little more electrical noise when receiving.

Should work just fine though, I use the cigarette lighter plug when I use
either of my radios in my pickup with no problems.

Hello and thank you all who read and can help me figure what this thing is and if it is worth anything.
It is some sort of base radio, I think Citizen Band.
White in color and has am,lsb,usb swithes with a couple of meters and a bunch of different knobs. too many to list, but I'm sure someone knows what it is and the value if it works properly.

Thank you so much

: Hear! Hear! I agree 100%! Personally, I remember the hobby the way
: it was back in the 70's. The FCC even then didn't enforce heavily, but they
: at least tried to provide some sort of enforcement. 1979 came along, and that
: seems to be when the FCC turned their back on the service. Now there's a
: proliferation of illegal noisemakers ("Roger" beeps, echo and reverb effects,
: etc), high power stations and illegally modified radios. It's about time the
: FCC stepped in and started cleaning up the spectrum!

I remember the 70s as well. It was during a low in the sunspot cycle, so
there was relatively little skip.

11 meter CB will never function as originally intended. The capability of
long range communication, even on 5 watts, ensures that the regulations
will not be obeyed by everyone.

: amplifiers are concerned.

Not totally.

: If you are caught with RF amplifier(s) in your possession which have the
: ability to operate on the 11-meter band and you do not hold a valid amateur
: radio license, you will be assumed to have used the amplifier(s) if there is
: ANY other evidence of it's use.

Such as monitored excess power. Correct.

: Do you know what "de facto" means? As in "possession of the amplifier is
: considered de facto evidence of it's use?" If not, you had better brush up on
: your terminology (and your knowledge of Part 95 as well.)

It is only "de facto evidence" if there is other evidence as well.

Simple possession is NOT illegal. If it were, then any Tech or Novice Ham
who possessed one would be guilty as well - as they cannot legally use high
power amplifiers on the HF bands.

What you have is probably the BEST radio around in it's time. If it is a
COMPLETE station, the Communications Power Incorporated 2000 (CPI 2000)
will easily sell for $300.00 providing it's all there and in tip-top shape.

hi andy. you must remember that the 79-290 is very sensitive to electrical
noise, going straight to the battery is your best bet for a quite recieve.

hi bill,
i'm not sure how you got to talking about what you did. i wasnt saying that the 2510 had a more sensitive recieve only a more selective one. here in a area around a lot of channel 6 operators and 3 freeways thats the most important thing. bill you can test and talk about them anything you want. are we supposed to just take your word on every little thing, perhaps you only report what suits you. to me you sound like a 2950 dealer protecting business. i myself frequently enjoy the dual watch feature of the chipswitch as well as the ability to go from 12 to 10 meters in the same radio. with a few mods to the recieve of the 2510 and youll have a even better radio than the 2950 modded or not. all anybody has to do is open both radios up and look at them side by side. i would say that the difference in the heat sinks alone is a good indicator of which radio is higher quality not to mention the more heavy duty circuit boards and every other detail. if a person is a free band operator working from the mobile a chipswitched 2510 is the way to go. the seperate programable tunning steps make this radio a breeze to work while driving. i have mine set for a 5kc jump up or down when the button is pushed. what bill calls extra fluff are all features i use everyday. true enough if your just a AM'er that stays on one channel all day you may not need the 2510 but if your a serious side band dx'er theres no better radio in the class. the people i talk to dont even use am so bills argument isnt good for what we do.

CHIPSWITCH Enhanced Microcomputer.

The HR2510 / HR 2600 / LINCOLN 10 METER Amateur Radios manufactured by the UNIDEN Corporation of America do not encompass many of the useful and desirable features of the modern day Amateur radio. The Chipswitch IC is a custom microcomputer chip (integrated circuit) which is programmed to give new life and value to your UNIDEN radio.

30 MEMORY CHANNELS WITH TEMPORARY CHANNEL LOCKOUT AND REPEATER OFFSETS

The original HR2510 / HR2600 / LINCOLN has basically one memory available to it in the sense that it remembers the frequency you were last on during a power interruption. The CHIPSWITCH supplies you with three groups of MEMORY BANDS. There are now ten (10) user programmable frequency channels available for each MEMORY BAND. You can elect to have repeater offsets to any of the stored memory channels. You are also provided with the ability to lockout any memory channel(s) temporarily during SCAN/SEEK functions.

EXTENDED FREQUENCY COVERAGE
Adding the CHIPSWITCH IC will allow the radio to operate contiguously from 11 through 10 meters without any further modifications. Installation instructions are available for review.

With additional modifications to the PLL PCB, the CHIPSWITCH allows full contiguous coverage from 24.800 to 29.999 MHz. (12 through 10 Meters). Modifying these radios for use in the 12 Meter range can be done at a few sites. Although with the Chipswitch, these radios could be operable to 15 Meters, some spurs near 15 Meters cannot be adjusted out, therefore a password has been added to the Chipswitch program to disallow access beyond 12 Meters at this time.

PROGRAMMABLE SCAN/SEEK FUNCTION

The original HR2510/HR2600/LINCOLN allows you to scan on an arbitrary 'band basis." This new feature allows you to select a range of frequencies for SCAN and SEEK while in band 0, or SCAN/SEEK by memory channels in band 1, 2 and 3. The SCAN feature allows you to set the 'hold-time' (the amount of time the radio waits to resume its scan function after that particular frequency quiets down). The SEEK feature is identical to the SCAN except for when the radio is scanning and detects activity on a frequency, the radio will receive on that particular frequency for a user-programmed length of time before it continues the scan. SCAN and SEEK are completely user programmable for 5 or 10 kHz steps in band 0.

PROGRAMMABLE CHANNEL UP/DN BUTTONS

This provides you with the ability to program the radio's channel up and channel down buttons to change channels/frequencies in any of five (5) different ways. (5 kHz, 10 kHz, Underlined digit, etc.

PROGRAMMABLE MICROPHONE CHANNEL UP/DN BUTTONS

This provides you with the ability to program the microphone channel up and down buttons to change channels/frequencies in any on of eight (8) different ways.

SPLIT FREQUENCY OPERATION

When enabled, this allows you to transmit on one frequency, and receive on another.

PROGRAMMABLE TRANSMITTER TIMEOUT

This feature provides the radio with a built-in QSO timer. When enabled, it triggers a programmable timer the moment the radio starts transmitting. When the user-programmed length has been achieved, the radio will stop transmitting. To continue transmitting, just release and press the microphone PTT (Push To Talk) Button.

PROGRAMMABLE TRANSMIT FREQUENCY RANGE

This provides you with the ability to program a range of frequencies to operationally transmit on. In this mode of operation, you still have the ability to receive frequencies out of the user-programmed range, but can not transmit on them.

PRIORITY CHANNEL (Requires optional hardware)

Priority channel operations allow you to program any frequency (i.e. home frequency, etc.) and have the HR2510/HR2600/LINCOLN check this frequency while you are on another, at a user-programmed rate. This feature will not function properly without the optional PRIORITY CHANNEL BOARD.

MISCELLANEOUS

The 'SPAN UNDERLINE CURSOR' now has a 'phantom' 4th position (all 3 underline bars) cursor. This enables you to go through the band in 100 kHz increments. This 'phantom' 4th position is indicated by 3 cursors.

The 'SPAN UNDERLINE CURSOR' position and the underlined digit can be moved by pressing both microphone buttons at the same time. (Great for mobile operation)

The button repeat rate is now programmable.

The internal 'button beep' duration is now programmable from 0 to 0.5 seconds.

The 'RPTR' button on the HR2600, when depressed, will transmit the CTCSS tone to open up a repeater station. Repeater offset selection is required when programming memory frequencies.

The HR2510/HR2600/LINCOLN now has two function modes:

OPERATE MODE

This mode is the radio's normal operation mode.

PROGRAM MODE

The front panel controls are used to program information the radio will use during OPERATE MODE (i.e. memory channel frequencies, split channel, scan functions, etc.)

INSTALLATION

As the name CHIPSWITCH implies, the basic modification of the radio is the replacement of the existing UNIDEN microcomputer chip. A person proficient in soldering/desoldering techniques on P.C. boards is qualified. A comprehensive installation manual is provided. No modification to the front panel is required as all the new features are controlled by the existing knob and buttons on the front panel. The optional PRIORITY CHANNEL BOARD and 12 METER MODIFICATION KITS do require modifications to the circuit boards.

>story.................hmmmmmm.

There's the problem, the lady, probably a neighbor never took the time to ask or let them know
that the offending party was causing the interference. Thats part of the problem today with people. This woman was happily watching wheel of fortune or something to that effect, and began
to get intereferrance.

Since she Obviously found out where the offending station probably was, instead of maybe letting
them know what was happening or what they were doning to some of her household electronics. She
probably felt as she was attacked. What i mean by attack is that when an offending station bleeds on the general publics home electronics they seem to jump to conclusions that it is intentional, and feel as if they are being personally attacked. (And that goes double with other
radio operators). They get pissed and and either never confront the person(s) or get down right
pissed at the person cause Pat Saijacks' face is getting all fuzzy cause some one is talking on
a radio.

For Example: I interfered with a couple of my neighbors phone conversations. One day i was out
in the yard and he asked about my hobby (CB). He pollitely slipped in about how he heard me a
couple of times on the phone. One of which was a rather inportant phone call.

Now logically thinking on how to reply to his comment after apologizing about the interference.
I asked him how recently was it that this happened. Thinking that something was maybe wrong with
setup, and i told him that. Also telling him that it would be benifical to him to tell me when
that happens agian, if it does happen again so I could resolve a problem if it was a problem
with my set up. I told him maybe something is wrong with the system and I'll check it out. A few
days later I had checked into redoing my coax connections, and found out that the RG-8 I was
using was crappy. i.e. hardly any shield, and losely woven, all around crap coax. So I went out
and purchased some RG-213. That fixed the problem. A couple weeks later I had a chance to
converse with my nieghbor and ask if he had any more interference problems. He replied no, and I
told him what the problem was, and if in the future if the problem was to rear it's ugly face
and I couldn't fix the problem that I would be glad to foot the bill for getting him some
filters for the electronics I was causing interference too.

But, i will go on record to say though it's knot just cb'ers that get ripped on about
interfering with nieghbors electronics. Any body with a transmitting antenna have the cross
hairs put on them at first chance, when interference comes into play. Hams get it too.

Actually the theory of lightning which you present is not quite correct. It's in the
wording.
Lightning take the path to ground with the least resistance to ground. I.E. The more
positivly
ionized air paticles That makes the pathway for the discharge to follow.

Shortet path would be a straight line and the highest point. And we all know that lightning
does
not follow a stright line.

Nonsense. Once the transmitting station has completed his
transmission, the repeater's carrier will drop within a few seconds
(the exact time determined by the length of the repeater's "tail").

If you aren't capable of determining when the 100-watt FM carrier of
that repeater has dropped unless it spoon-feeds you some sort of noise
to specifically inform you of that fact, try cleaning the wax out of
your ears.

I operate 11m CB on AM and SSB as well as simplex and repeater
operation on 2m and 70cm. The ONLY time that a courtesy tone serves a
useful purpose (out of the above) is on 11m SSB when there IS no
carrier in the absence of modulation - such as when the transmitting
station pauses between words or sentences.

A "roger beep" is no different from a courtesy tone on a ham repeater.
It's purpose is to inform LIDS that the person they are talking to has
finished transmitting, since they are incapable of determining that
fact with their own unaided ears. The exception, once again, being in
SSB operation when there is no carrier in the absence of modulation.

272. FCC regulations on interference

Newsgroup: rec.radio.cb
Date: 1999-10-04 00:00:00 UTC
From: Dave <dave@???.com>
Message-ID: <041019990246093852%dave@???.com>
Source record: 4721

My neighbor has got a CB antenna running from his roof. When he is on his CB he causes interference with our local broadcast television reception. Channel 5 is the worst, and we can usually hear what he is saying, along with causing bad snow in the picture and knocks out the broadcast audio. On the other chanels, we usually only get the snow.

Other times we can pick up his broadcasts over our phone lines. I understand this guy is zealous about his hobby, but it causes 'line noise' interferes with my hobby of using the internet.

Anyway, this guy is on for HOURS at a time and the whole time, our broadcast channels are unwatchable and I get knocked offline.

I know this is a violation of FCC regulations regarding interference, but what can we do about it? Who do we report it to?

I would appreciate any info you can provide. I really don't want to interfere with this guys hobby, but it's really not fair that his hobby interferes with ours.

I have the following Radio, and electronic equipment for sale. Will consider trades for Hand held Scanners with full 800 coverage. All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address. Thanks
EJ (KC5EPI)

All Tube Items:

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model6601) Looks good and plays on FM only. AM not working. $100

Non Tube Items:

HTX-202: Radio Shack 2 Meter HT. Works good. Slightly chipped where the battery slides in, but does not affect operation. No nicad, but I will include the AA Battery pack with the unit. $80

Marantz Model 2220B: 25 year old Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $200

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $150 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

i have 2 CBs converted to 10m, a Cheroke CBS1000 and a Cobra 148GTL, but
i never bother to use the extra chans, all i need is good ol 17, the BS
chan from hell. so my view is the 10m stuff is just useless unless your
a DXer
or HAM. and a ham wouldnt use that cheap converted CB shit! </sarcastic>
i love my CBs, i just hate those stuck up hams! long live CB radio!

(god i regret posting this with my real name... i can feel the flames
from here...hehe)

Hi there,

I`ve been looking around for a good deal on a handheld (or hand held) CB radio. I can get the GE 3-5980 at around $25.00. Does anyone have anything positive or negative to say about this radio? I`d like to hear it VIA E-MAIL.

Or if you have a handheld unit for sale please e-mail me.

Oh, an OO letter. That's a bit different from an NAL or any "official" FCC action. In my area, we tell the OO's to cut up their "pick slips" into 4 inch squares and wrap them on a roll in the bathroom, and then go find a life.

We've had a few of our guys receive OO letters, relating to our somewhat rowdy conduct. The worst that they can do is give us hell for not Id'ing every 10 minutes (Hey, I'm not a clock watcher). What we talk about isn't obscene(but tends to get a bit racy), or violates part 97. So just because we aren't doing the usual geek thing ("Hi, Hi, Fine businees OM, are you destinated yet?"), these stuffed shirts have to understand that they have no business trying to censor our content, as long as it doesn't break the rules, regardless about how they personally feel about it.

We do have one guy that occasionally goes a bit too far when he starts playing WAV files from South Park, Howard Stern, and a Grandpa AL Lewis, "Fuck the FCC". I'm waiting for the axe to fall there. It's lucky we talk on a fairly obscure 2 meter simplex frequency....

I'm really surprised that the FCC would blindly act on the "word" of an OO. An OO's judgement is highly subjective, and unless they are dealing with an obvious clear-cut rule infraction, I would think the FCC would request more information before passing judgement. In the past, OO's reports have resulted in the FCC being dispatched to investigate, and NAL's would be issued if the FCC found it necessary. I would hope that you will counter the accusation if the claim is groundless. The FCC is really exposing itself to a libelous situtaion, if it publicly represents this action as the truth, when it has yet to be proven.

I was at a hamfest yesterday. I saw no less than 12 "CB type" amps for sale. Most were small 2 pill mobiles. What did catch my eye, was a vintage triple power D&A Phantom, a Palomar Skipper 300, and a HEC 500. Reminded me of the glory days....

Of course the people that owned them may not have been hams, but the point is that at a hamfest, the only thing that matters is $$$$$$. It doesn't matter who you are or what license you have, as long as your money is green.

It's not "totally" legal. You admit to having no modulation limiters.
That means that the modulation will exceed 100%, so you are illegal.
Carrier power is only one facet of technical compliance.

Even if the radio is an older 23 channel radio, which many times did not
come with limiters from the factory, you are still required to make
reasonable attempts to maintain a 100% modulation maximum.

The interference you are receiving may not be in violation of any law, but it I'll bet it is very annoying. There are several things you can do to try to protect your TV reception. If you are on cable; call the cable company to have them check the system. Check all the jumpers between your VCR and TV and cable box and disconnect anything connected to the TV one at a time. Often the VCR is prone to RFI rather than the TV. If you are not on cable, attach a good HI-Pass filter between the antenna and TV. Get square ferrite chokes from radio shack and wrap all of your cables in them. Try to determine where the RF is getting into your system. Is it the AC line, the antenna line, or do you have extension speakers, or a Home Theater sound system hooked to your TV? Any of these paths can be vulnerable. Start by just watching the TV alone with nothing else in line. Ask your neighbor politely if he will assist in the testing process. He may be a completely legal operator, in which case, YOU need to prevent the interference to your unprotected devices. Contact the manufacturer of your TV. Often they have kits you can install to prevent RFI. The FCC has an interference handbook available, which has lots more ideas. You can probably get info on it at the FCC website. Good Luck!

Is Channel 2 in use locally? If so, this should be the worst of all since it
is almost an exact second harmonic frequency of CB. But Channel 5 would be
second worst since this falls near the third harmonic. On the other channels,
you're simply experiencing front-end overload of your television.

>Other times we can pick up his broadcasts over our phone lines. I

Not necessarily. It is only a "violation" if he is running excessive power or
otherwise operating his radio illegally.

Don't believe me? Why don't you call the FCC? They will tell you that a stock SBE Console II of 1976 vintage was very much legal to run at any modulation level since this radio was NOT required to be equipped with a modulation limiter.

And what ethnic background might that be? Are you making an assumption based solely on my surname? Actually, my family is from Spain. But we also happen to be Sephardic Jews. So I guess Spic-Kike will do.

>
> But, rec.radio.cb is not a place for a showdown on racism, is it?
>
> Their is a difference.... Call a black man a Nigger, and I seriously doubt
> that you would walk away in the same manner that you walked up...

That depends on your size and fighting skills. Could be he walks away in worse shape then when you walked up. It sounds to me that you have been taken in by the "Black Physical Superiority" stereotype. Don't be afraid of them Toll, they bleed just like you and me.

>
> Kind of like the difference between a "Vato" and a "Vato"...

I have absolutely no idea what "Vato" means. I am fluent in English and Castilian (Spanish). The term "Vato" has no meaning in either language that I'm aware of.

>
> Border language (and the English raping of the hispanic language)

Correction: That's "Spanish" language, not "Hispanic" language. By definition, there is no racial distinction in the term "hispanic". A hispanic person may speak Spanish, however, a hispanic person may or may not *BE* Spanish (Iberian-European-Caucasian). That is why I have never liked the term "hispanic". It's like inventing a term that suggests that Negroes who speak English are Anglo-Saxons.

You continue to confuse race with nationality. A Mexican is a citizen of the country of Mexico, not a member of a particular racial group. As a matter of fact, most Mexicans are pure blooded Indian with no Spanish ancestry whatsoever. Those that are Spanish/Indian hybrids are called Mestizos.

>
> Just remember, if you want to be an asshole,

Oh Gee Wiz!!! How can I possibly counter such a well thought out and eloquently phrased argument???? I know....I'll invoke the undefeatable " I'm rubber you're glue " defense!!!! That'll show ya!!!!

My point (which you obviously missed) is that if a particular group of individuals finds a particular term offensive, and demands of another group to desist from using the term, then the first group must expunge the term from it's vocabulary *before* demanding the latter do the same. To demand otherwise would be hypocritical and racist in it's own right. If they are unwilling to take the first step, then they should just *GET OVER IT* and stop getting so incensed over other's use of the term based on the color of the users skin. After all, you don't hear people of Spanish heritage or of Jewish heritage calling each other "My Spic" or "My Kike" do you?

people can do the same to you,
> Senor Lopez!

Yes, well...so what! I practice what I preach. Frankly, I don't use any of the above terms. Not because I'm careful not to offend anybody, but because they have simply never been part of my vocabulary. As for what others say and think about me......I've grown way beyond caring my friend.

Hasta la vista (Shalom) baby!!!

Ray,

First off, you sound like a mina bird... You have come up with nothing constructive but to put down CB operators since you came on this group.

That is something to be proud of, isn't it?

Now, let's go below and find out that you are a flipping idiot that is incapable of thinking for himself and merely regurgitates what other hams have told him over the years....

Sure sounds to me like Roger Beeps are illegal

>>>Where?? Seems to me that if they where illegal, the two type accepted Galaxy radios that had them in the radio from the factory would cease to have a type acceptance sticker, wouldn't they? Kinda blows your whole argument out of the water...

The feds approved the radio for use on the standard 40 channels. It has a roger beep. It is legal.

Therefore, the correct corrollary would be that a roger beep is legal!

See below for your misinterpretation of the codes:

>
> Consider, if you will, the following selections from FCC Rules Part
> 95, Subpart D.

>>>>O.K., yes... Let's consider it:

>
> Para 95.412(b) You may use your CB station to transmit a tone signal

>>>So, the tone of a roger beep is legal... Can't be illegal to transmit a tone, if it falls under certain reasonings... Those are explained below:

> only when the signal is used to make contact

>>>No, the roger beep doesn't do that (but, a device called a "Buddy Beep" years ago did), so that must not be what makes it legal.

or to continue communications.

>>>Hey, guess what? It does help in continuing communications! How about that!

> (Examples of circuites using these signals are tone operated squelch and
> selective calling circuits.)

>>>>These are just examples, and god knows that examples are not the end-all for the rules!

If the signal is an audible tone, it must last
> no longer than 15 seconds at one time.

>>>And a single tone beep (which the FCC has already ruled as being legal, since they type accepted the Galaxy radio (949 and 959) is a lot longer than 15 seconds... . More like 1/4 to 1/2 a second! Makes it legal, don't it!

If the signal is a subautible tone, it
> may be transmitted continuously only as long as you are talking.

>>>>Well, that wouldn't apply, as the roger beep is audible. Not to be confused with a CTCSS or PL tone!

>
> Para 95.413(a)You must not use a CB station--
> (6) To transmit music, whistling, sound effects or any
> material to amuse or entertain.

>>>>So, the single tone roger beep is not for

a. Music
b. Whistling
c. Sound effects
d. Entertainment.

The single tone roger beep is designed as a EOT (End Of Transmission) tone. And, the FCC (once again, I must continue to reiterate this.. . Seems that drilling is the only way to get something in your head) has ruled that they are legal!

> (7) To transmit any sound effect solely to attract attention.

>>>>Well, the roger beep is used for signalling the end of a transmission under adverse circumstances (High QRM or QRN).

So, looks like you regurgitated something that you read, misinterpreted it, and should now feel like a total ass.

The bottom line is that the FCC has type accepted a roger beep equipped radio, and that is that. They did not issue a recall on it, it serves a purpose (unlike yourself), and people will use it both for real and assinine purposes.

Whether hams choose to use it or not is at their discretion. I have run across people that didn't like mine. I turn it off. Others have asked (albeit rarely) for me to turn one on.

Whatever floats their boat.

>
> Sure sounds to me like Roger Beeps are illegal.

>>>>And it sure sounds to me like you are acting like an ass. The FCC type accepts them. How are you going to say they are illegal?

Have a nice day.

> You may see a different SWR reading due to the coaxial losses

No you won't. You see different SWR readings due to voltage standing waves on the coax... Not due to the losses in coax!

> but it has nothing to do with whether or not the antenna is reactive.

It sure as hell does! If you are dealing with a nonreactive, 50 ohm antenna, you will see the same SWR across the feedline, no matter where you measure it.

If you have a reactive load, the swr will only be duplicated from the feedpoint at every multiple of an electric half wavelength away!

That is a simple law of physics.

> A mismatch is a mismatch regardless of whether it is reactive, resistive
> or any combination thereof.

Not totally true. You can use a stub of coax to tune out positive reactance...

Harder to tune out negative reactance.... Must use a coil to do so.

Of course, if you have a 40 ohm antenna with NO reactance, that would be the hardest to tune out without a network!

There is nothing different about a reactive
> antenna impedance other than the fact that it is by definition a mismatch.
>

Sure their is... A reactive mismatch means that the antenna is not resonant on that particular frequency...

A mismatch due to different impedances will indicate that the antenna is resonant at a certain frequency, just not resonant with a feedpoint of 50 ohms!

That would be the effect of tuning for maximum field strength, rather than tuning via an SWR meter.

> Also a mismatched antenna (not 50 ohms) is not a necessary or
> sufficient condition in order for the coax to become part of
> then antenna.

It sure as hell is!

Starts playing hell with the currents on the line! That causes current mismatches on the outside of the coax (in some cases), which in turn cause

the coax to become part of the antenna.

The other side of the coin is where you use a length of coax to become an impedance transformer.... That is where you use a piece of coax TO BE A PART OF THE ANTENNA.

Their are other amateur arrays that use the coax as both a tuned stub as well as a piece of the antenna.

>
> The CLP has it right!

And you BOTH have it wrong!

What coax losses are there in 18 feet of rg8? None to speak of.
The different SWR reading Is NOT due to coax losses. Not in
this specific case.

It should have been set so that the dead-key is not that
high.

> and the amp i want to mate
> the 66 to is a Cobra 350XL from coaxkid (palomar blue face type, HD
> class AB1) anybody know if i would be safe to run this combo, or if i
> would kill it?

You'll kill it if you don't run the amp on a low output
setting. The amp will stand a dead-key input of 5 watts
topps. The PEP input can be very high. You MUST limit
the AM dead-key input to 5 watts.

The trick is to buy your amp from a guy that knows how
to match your radio to the proper amp. A 10 watt deadkey
means that you're trying to match an amp to a 10 meter
radio.

Thanks to all for the excellent info.

We have asked him repeatedly about the interference. At first he was interested in coming over and trying to help, and at one point he made a comment like, "Well, I guess I'll have to turn the power back down to 3 watts". I don't remember what the exact number was, but in the course of conversation he stated whatever the number he said he was going to come down to was the legal maximum for CB broadcasting. After this we had no interferance for a week or so then it started again and slowly it started getting worse and more frequent. I guess this is the reason I was going with the "FCC regulation" angle. It just seems like he started cranking the power back up.

Anyway, I will explore the filter option and see what comes of it.

Again, thanks for the info and the advice!

You need an electric line filter connected to the receptacle that has the CB connected to it. The interference is probably evident in every electrical outlet in your house when the Nintendo is on. Radio Shack sell a pretty good unit for about $14 (If you open it up you'll see that its nothing more than a string of electrolytic capacitors wired in parallel)

PS. Try using some cheap snap-on computer monitor baluns first. They worked for me on a couple of similar situations I had due to interferrance coming from compact flourescent light ballasts.

> therefore coax length DOES make a difference. Good luck Gordon

Simply not true. The antenna impedance does not determine if your
coax becomes a part of your antenna system; other factors do.

Furthermore, the coax length does not affect the SWR.

Just keep your coax as short as possible to minimize losses.
Adjust your antenna to minimize the SWR.

You got that right. 9 times out of 10 you can understand a damn word
that they are saying. Sometimes I think they are talking to themselves
just to talk to be heard.

Am I to assume that you have a KW-7 Firestik? That's what I use and
it kicks butt! I also have a Wilson mag mount in the closet for a spare.
That's where a spare should stay! Base loaded mag mount. Trash!

Question to the NG: Someone posted a breakdown of the amount of power
emitted per foot of antenna, stating that more power comes from the
bottom of the antenna. If that were the case, wouldn't a fluorescent
tube light at the bottom easier than the top of the antenna? If the
voltage peaks at the end of the antenna, more power would be emitted
from the top, right? I was once zapped by the end of a ground radial
of an antenna I made (with 3 watts!), so I know the voltage is higher
at the end of the wire.

And at that point, you where still illegal because you "cranked up" the D-104.

This would cause you to be above the 12 watt PEP limit of SSB (if it was on SSB) and 16 watts PEP on AM.

Also, you would have to fall under the "Cannot cause interferience" clause.

So, even if your station didn't have a limiter in it, you would still be illegal.

Face it, you did it with malicious intent, and that makes you just as much of an asshole as the rest of us CBers!

The master of disinformation, Senor 2879 is at it again!

For the record, I tell this asshole nothing...

Now, on to the info...

To hook up both the amplifiers, you will need 2 100 ohm 2 watt resistors, 2 100 ohm 1/2 watt resistors, a splitter and a combiner (all available from RF parts).

The splitter will take the input to your amps and split it off, 180 degrees out of phase, and feed it to each amplifier. Across the splitter, place the 100 ohm 1/2 watt resistors in parallel to each other, one side each on the inputs.

The same thing on the outputs...., only use the larger resistors and a combiner (which is just a splitter rated at higher power).

If either of the resistors get more than barely warm, you have an imbalance. The input side (splitter) will be caused by a set of amps that are not drawing the same. This can be caused by (small effect) beta of the transistors, bias of the transistors or other things.

On the output side, it is usually caused by the transistors being from a different gain lot.... In English, this means that one set of transistors may be doing 250 watts and the other set doing 240 watts.

The little resistors going across the splitter / combiner serve to equalize the currents in and out of the amps, as well as give you an indication of balance.

Better yet, sell the amps or purchase a larger amp.

Outside of the attic would be better. People have successfully used
disguise antennas like a vent antenna, or a 18" dish antenna, or a
flagpole antenna.

If inside is what you want, then try a spare mobile antenna with
additional nine foot radials at the base. If you want to make a
antenna from scratch then take approximately a nine foot vertical wire
radiator, and three or four nine foot ground radials. Trim the
vertical wire for best match. However this antenna may be interfered
with because of the close proximity of the attic. Because of this you
may not be able to get a good match no matter how you trim it. The
best solution for this antenna would be to use a antenna tuner before
you trim the antenna down to nothing.

I don't know if anyone posted a power/foot spec. on the KW7. You
would have to model it. As far as i know the only numbers that came
from modeling this antenna came from me a couple of years ago.
I don't recall any models other than the ones i made. I could be
wrong?
Anyways the easiest way to show the difference between a
KW7, and a 102" whip, is to show jpg's of each antennas currents.
They are attached here.

I didn't tell the guy it was impossible, just better to not try. It is easy
to do (with the right experience) maco,cci and a couple of other people
either used to or still sell these combiners, just as easy to build
yourself, as you told him, but probably not worth his time considering the
fact that guy would probably be lost if he had an imbalance.

Ben, I have read the other reply's to your post, but I have this same amp and used it with an Eagle Sidewinder 400 with 10 AM dead key. Smoked the finals twice. The tech I had work on it tuned it with a Cobra 142 @ 4watt AM dead key with no problems. Back on the Sidewinder and poof. I recommend no more than 4 watt deadkey. The little you give up in drive will save alot of headache. Also a side note, the Cobra amp isn't the same Cobra company that makes the amps. It is a fairly clean amp though, had lots of comments on the audio from it. Hope this helps, Marc

You could put a 4ft. by 4ft. metal plate on the floor of the attic and use a magnetic antenna or you could use a marine cb antenna which needs no ground plane

The Cobra network runs on Channel 34 USB.

I used to belong, years ago to their net... Good bunch of people.

San Diego Border Controllers run channel 6. They are the typical superpower base and mobile stations. If you are into SSB, probably not your cup of tea.

Very true.

Some kids seem to be better conductors than others, though!

I remember in High School (Santa Cruz, Ca), we had two girls wearing new (at that time) spandex type bathing suits...

Lightening struck the beach in front of them a couple feet away..

The lycra or spandex or whatever their suits where made of instantly melted away....

Leaving a couple nice naked bodies! ;-)

I have read part 95, and if you knew the difference between average power and peak envelope power (FNG -- Fucking New Guy... Must be a no-code tech), you would know that the peak power output of a 100 percent modulated AM carrier is nearly 16 watts!

I suggest that you go back and read some more of Gordon West's material..

Oh wait.... He only gives you enough to pass the test... Not enough to know what the hell you are talking about.

On a side note... (read this as mathematically proven):

4 watt carrier, for base reference..:

RMS power = 1
AVG = RMS*1.414
PEP = AVG*2.828
Therefore, PEP=3.998792*RMS

So, if we have a 4 watt carrier, you take that 4 watt carrier and plug it into the equation:

4 X 3.999 = 15.996 PEP watts
4 X 1.414 = 5.656 AVG watts
5.656 * 2.828 = 15.995 PEP watts.

See how that works out? The average heating power of a 100 percent modulated (sinusoidal, single tone) is only 5.656 watts. It is only 4 watts RMS, however, it is close (15.995) to the 16 watts that I mentioned above.

Hope this serves to pick up where Gordon left off...

These are simple formulas that a lot of the CB community knows, but for some reason, the Ham community doesn't...

Toll Free

p.s. I like how you don't use a real email address... What's up with that?

Ranger AR-3500

Freq Coverage: 20-30 mHz (and could have VCO work to go farther)
Power out 100 watts PEP (up to 150)
Modes AM, FM, SSB ,CW
Split freqs capable for repeater offset or DX

As a matter of fact, it does nearly everything my Kenwood does! Except
selectabel filters and dual VFOs.. (except for the split part)..

Funny.. It was a 300 dollar radio.....

Good deal in my book!

Very little. The swr is flat at Channel 1 and slowly goes up as the
frequency increases. If you operate primarily on channel 1, well, you
are in great shape. Otherwise the antenna might be a tad long and there
is likely some adjustment available to you. Check to see if there is a
set screw anywhere at the base of any portion of the antenna and if so,
drop the antenna down into the well as far as it will go and then check
it again. Avoid any trimming until you are sure of what you are doing,
and then only an eighth to quarter inch at a time. You would like for
that flat spot in your swr to be where you spend most of your time, but
if you use all the channels, try to get it flat around channel 20 and
all will be good.

I've seen it on a number of CB mod websites. Do a search for
CB mods and you'll find it. Just make sure you have a good
frequency counter available when you do that mod so you can
center the control. In other words, it's not a "cookbook"
type of mod where you simply do A and B automatically happens.
There is some adjustment required.

>You must have a RAT SHACK cb, cause i have a child that plays 64 all the time
>and it never comes in on my uniden washington.

Do you live in the same house as him and plug your radio in the same outlet? NO! Then you can't possibly encounter the same conditions as he does. Don't put down a product just because a store that you don't like sells it. Many radios are manufactured at the same plant and have different names put on them. For example: the Bearcat Trunktracker Scanner is also sold at Radio Shack. The only difference is the name put on the case. Maxon 2 meter mobiles are made at the same factory in Korea as the Radio Shack HTX-242. They are the same radio with different names.

Of course they can't all be mighty Uniden radios, now can they? Hmm.. I wonder how many other radios carry the insides of the mighty Uniden radios but have a different name on it... Hmm.. now that I think about it, I believe a few of the "Rat Shack" radios as you put it are the identical radio as some of the Unidens.. gee, imagine that. I guess they must be pieces of crap too...

Blue Face amps aren't pieces of crap.

What you're looking for is some old unbiased thing from the 70's.
I have a box full of those. They all need power transistors. I'll
sell you one for $20. Put a pair of 455s and a variable pot in it
and you'll have your modulator. Add a simple diode-based bias
circuit that you can switch in and out for SSB use.

The radio's abilities not mine,I have won my catagory in the ARRL 10 meter contest for Montana 3 years in a row and beat all surounding states but 1 guy in Wyoming.I almost kept up with the college multi-op station from Bozeman and they were running 1,500 watts compared to my low power classification.I also only used 1 antenna.
Point is I'm not that great an op but I know what I'm doing.I know a Cobra 148GTL etc will operate on 10 and work well on the freq and mode its operating but there is so much more fun to be had with a rig that will do more.

Yawn.

Please see below...
> > No you won't. You see different SWR readings due to voltage standing
waves
> > on the coax... Not due to the losses in coax!
>
> Let's paraphrase this statement: "You see different standing waves
> due to standing waves."

No, you see different standing waves due the the fact that the voltage
levels on the coaxial cable are different in different spots due to a
mismatch at the other end. This is not because of losses!

>
> The only reason you get different readings is due to coaxial losses.

Bullshit. Show me one coaxial cable manufacturer (Belden or Andrews,
please) that would state the same thing.

As a matter of fact, the Bird catalog states something entirely different.

I leave it up to you to do a little investigating.

> The Standing Wave Ratio is, in essense, a measure of the ratio of
> the reflected power to the forward power.

Exactly! Not a ratio of the forward power to the losses in the coax!

If what you state was true, the following would pan out.

100 foot run.

75 ohm antenna (1.5 to 1).

Run 100 feet of RG-8 and take a measurement.

Run 100 feet of RG-58 and take a measurement.

Guess what! THE READINGS ARE THE SAME!

Try it.

Your wrong.

The only way these power
> levels change is through losses.

Bullshit. The power levels are different because of the fact that the
reflected power goes through voltage minimas and maximas. If you measure

VSWR at a point where the current is at a maxima, the SWR will appear to be low.... When in fact it is not.

Try using an RF Ammeter to measure these things.... Or add a 4 foot section of coax to a mismatched feedline.

You will see some different things! And the loss from a 4 foot slice of coax is negligible at 27 megs. That is something else that you can find from Belden or Andrews!

>
> > > but it has nothing to do with whether or not the antenna is reactive.

That statement proves that you know not what you spout!

> >
> > It sure as hell does! If you are dealing with a nonreactive, 50 ohm
> > antenna, you will see the same SWR across the feedline, no matter where
you
> > measure it.
>
> Now you are adding more conditions to create the perfect case where
> there are no standing waves.

No, these are called facts. Some people (unlike yourself) deal in them.

Welcome to reality. You can check yourself in at the door.

>
> You originally said "reactive". How is a a reactive antenna impedance
> any worse than a non-50 ohm resistive antenna impedance? The answer is
> that it isn't.

Bullshit. If you have reactance on your feedline (40 ohm Z with +10j), you will see an impedance of 50 ohms. Their is a mismatch, though. However, the antenna will radiate its best because it is "resonant".

This is where (at the least), a noise bridge comes in handy!

>
> > If you have a reactive load, the swr will only be duplicated from the
> > feedpoint at every multiple of an electric half wavelength away!
> >
> > That is a simple law of physics.
>
> That is simply not true and you cannot produce any physics to prove it.
> You are confusing impedance with SWR. The impedance is duplicated
> every half wavelength. The SWR is constant at all lengths.

I suggest you read the ARRL handbook for the radio amateur, the ARRL antenna handbook, any issue of the ARRL antenna compendiums, the Radio Handbook by William Orr or a multitude of simple CB radio books. Not to mention the Bird and Coaxial Dynamics literature.

So far, the engineers of the world are against you.... You ready to take on Newton next?

All the texts above support what I say..... Who is backing you up?

>
> > > A mismatch is a mismatch regardless of whether it is reactive, resistive
> > > or any combination thereof.

Bullshit. A mismatched antenna that is totally resistive is resonant. A mismatched antenna that is reactive is NOT resonant. If you don't know the difference between a resonant antenna and one that is not resonant, I suggest that you stick to your simple VSWR meters and go no farther than 4 watts.

> >
> > Not totally true. You can use a stub of coax to tune out positive
> > reactance...
>

>
> You can use a coaxial matching transformer to tune out most any reasonable
> impedance (e.g. no shorts or opens).

Ahh yes.... Use reactance to tune a resistive load. Simpleton method of doing it.

The correct way would be use an "L" network (at the least). You can build a simple LC circuit, right?

>
> I can match a 40 ohm impedance with a quarter wavelength of 44.76 ohm coax.

And that is a handy number, isn't it?

> But that is not what we were discussing.

Your right, but while where at it, I thought I would school you some more.

>
> > There is nothing different about a reactive
> > > antenna impedance other than the fact that it is by definition a
mismatch.
> > >

Yawn... Once again....

> >
> > Sure their is... A reactive mismatch means that the antenna is not
resonant

>
> It does not. If I terminate a transmission line with a 40 ohm resistor,
> there are no currents on the outside of the coax.

So you are saying that a Balun is unneccesary?

Or are you saying that if you have an antenna that is 10 ohms, you don't
need a matching network?

Or are you saying that an antenna that is RESISTIVE 50 ohms, and not
reactive in the least will not have outside currents...

I agree with the last statement, but that is rarely the case because FEW
CBers actually use a noise bridge, antenna analyzer or field strength method
to tune an antenna. That is where reactance comes into play, and where
common mode currents start to misbehave.

The current is reflected
> back down (inside) the coax. A mere mismatch does not cause current to
> flow on the outside of the coax; there is no correlation.

A mere mismatch doesn't... A reactive load CAN!

(notice the different words there....)

Current on the
> outside of the coax is caused by other factors like a poor counterpoise
> or imbalanced antenna currents.

Which a reactive load can present.

>
> > The other side of the coin is where you use a length of coax to become
an
> > impedance transformer.... That is where you use a piece of coax TO BE A
> > PART OF THE ANTENNA.
>
> I would not consider a coaxial matching transformer to be part of the
> antenna. It does not radiate or receive any power.

Bullshit.

Try to run a piece of coax that you are using for a G5RV down the side of a
grounded tower.

You have a tower, right? If so, give that a simple try... It would even
work with a dipole, as a center fed, horizontal dipole doesn't terminate in
50 ohms... You use a quarter wave transformer to get the feedpoint their.

>
> Better watch what you say, the CLP will arrest you!

> RG-8 has about half the loss of RG-58. It would read
> approximately 2.86:1 instead of 3:1.

Bullshit. I did try it, with RG-213U.

It read the same.

Have a nice day.

Your exactly opposite.

The AMC controls AM.

The ALC controls SSB..

Turn either one up too high and you make more distortion than useable power output.

the
> only too visible and obnoxious stereotypical operator. Guess that
includes
> you, my apologies. Sorry if the "foo shits."

"only too visible and obnoxious stereotypical operator"

And that would be a blanket comment about the CB radio community.

When you first said it, you acted (and it read as) a comment directed at the
CB community..

Guess what....

When you call everyone on a newsgroup a CBer, that means that you think that
they are all CBers!

See how that works? You make a blanket statement, don't attempt to retract
it and save face when someone calls you on it.

> >
>
> I am perfectly capable of thinking for myself, and have held these

>
> Which was my opinion. See, is says "sounds to me" which should
> indicated that I am voicing an OPINION as opposed to trying to represent
the
> statement as fact.

Co, if we go throught he entire statement history, it will show where you
DID represent this as fact, even quoted part of the US Federal regulations
so as to back up your allegations.

Once again, you made a statement, and are now attempting to make a graceful
retraction.

Sorry, I hold people to what they say, and you stated that roger beeps where illegal.

> >> Consider, if you will, the following selections from FCC Rules Part

>
> Okay, so a single 1/2 second tone is acceptable.

O.K., so in essence, what you are saying is that roger beeps are now legal..

Just wanted to get that straight.

I don't have a
> problem with that either, provided said tone is properly modulated not to
> cause interference on adjacent channels.

I think that we are in agreement with that.

My objection to the so called roger
> beeps are the multi-beep sequences that one can hear 10 channels away and
> which go on for 3 to 5 seconds at a time.

Those aren't roger beeps, they are "PEE" tones, or multitone beeps.

I don't run one. I hate them. To me they are about the same as the "Roger
Poot:"

THESE are the tones I consider to
> be against the spirit of the regulation cited above, not a single short
> duration tone.

O.K., but that isn't what you said. You stated that they where illegal.
That was the point I was trying to make.

> >
> > If the signal is a subautible tone, it
> >> may be transmitted continuously only as long as you are talking.
> >
> >>>>>Well, that wouldn't apply, as the roger beep is audible. Not to be

> But the multiple sequence tones ARE.

And they are stupid. We agree on that.

> >>>>>Well, the roger beep is used for signalling the end of a transmission
> >under adverse circumstances (High QRM or QRN).
>
> Doesn't explain why I have to listen to some idiot's radio playing
> "Dixie" across 10 channels when the ambient noise level is S1 or below.

You want an explanation for that?

"People that use the multi tone roger beeps have little imagination or are
trying to make up for another deficiency, which I won't go into here".
> >So, looks like you regurgitated something that you read, misinterpreted
it,
> >and should now feel like a total ass.

>
> >Have a nice day.
>
> Hmmm, too bad I don't feel as charitable as you. I'm sure you could
> guess about the day I hope you have...
>

Well, that is too bad.

Although I am an asshole, I do mean whatever I say. Just because you where wrong about a statement that you made doesn't mean that I hope you have a shit day.

That is what separates men from children.... Men can disagree and then go have a beer together afterwards.

Children can't. They hold grudges and act immature.

Dynamite will blow down only when elevated. On the other hand, sky-earth lightning strikes normally generate from the ground. Toll Free was correct. The problem is that the lightning will take the course of least resistance at the moment, and it is rarely what WE anticipate to be the course of least resistance. That's why a kid can be standing in a field 50 meters from a power pole and get zapped, while the pole continues to stand untouched.

I think it has a lot to do with the situation. In the coming years,
interference from US CBers on 10 meters will be miniscule compared to
the interference coming from the southern hemisphere. And guess what,
the FCC can't do a thing about that particular problem...Especially
since NAFTA passed!!!

Try to talk to the guy. Ask him if he has a TVI filter on his
equipment and if he doesn't could he please get one. If that doesn't
help, tell him he needs to get someone with more radio experience than
him to come over and properly tune his equipment.

If your attic can accomidate a 5 foot antenna, then the firestik IBA-5
might work for you. It costs around $39.95. I have had reasonable
results with it. You would probably get better results because you
would mount it higher than I have mine.

I don't know if anyone posted a power/foot spec. on the KW7. You
would have to model it. As far as i know the only numbers that came
from modeling this antenna came from me a couple of years ago.
I don't recall any models other than the ones i made. I could be
wrong?
Anyways the easiest way to show the difference between a
KW7, and a 102" whip, is to show jpg's of each antennas currents.
They are attached here.

> [Image] (Firestik.jpg) showing curve moving away from top
>
> [Image] (fullquarter.jpg) showing curve tapering off at top

Scott (Unit 69) wrote:

The first one is the KW-7, wouldn't that have a better radiation pattern
then the 1/4 wave whip? Would explain the gain over the 1/4 wave.

I believe the guy modeled a 1/4 wave whip.

The slow motion I've seen of lightening shows a stepped
leader from the cloud to the ground. Once that leader hits
the ground, the earth shoots a bolt back to the cloud using
the warmed ionized path the leader took to the ground.

The law CAN be changed. Happens all the time. BTW, the wording I
SHOULD have used should have been "They can be prohibited from being
COMMERCIALLY available in the US..." Slight difference in wording, large
difference in application. BTW, why buy something you're not planning on
using? If someone buys an illegal amplifier, I think I'd be better than 95%
accurate when I figure that guy's going to USE that amplifier, and he's going
to use it illegally. Especially when it's being sold to a non-ham licensed CB
operator...

Consider, if you will, the following selections from FCC Rules Part
95, Subpart D.

Para 95.412(b) You may use your CB station to transmit a tone signal
only when the signal is used to make contact or to continue communications.
(Examples of circuites using these signals are tone operated squelch and
selective calling circuits.) If the signal is an audible tone, it must last
no longer than 15 seconds at one time. If the signal is a subautible tone, it
may be transmitted continuously only as long as you are talking.

Para 95.413(a)You must not use a CB station--
(6) To transmit music, whistling, sound effects or any
material to amuse or entertain.
(7) To transmit any sound effect solely to attract attention.

Sure sounds to me like Roger Beeps are illegal.

I agree completely! Add an amplified mic. but leave the
limiter intact for the optimum communication effectiveness.
I assume what Bill wants is to be heard better, not just to sound
louder. (Being louder does not necessarily mean being heard better,
especially if your signal is being badly distorted by overmodulation.)

Besides, over-boosted AM/SSB signals sound like the worst sort of
crap and splatters everywhere. It's loud all right. Why anyone with
pride in their gear would ruin a perfectly good stock sound (at most
requiring a good amplified mic adjusted to drive the limiter into
limiting) by defeating limiters and overdriving their radios
is beyond me. It does not sound good, it splatters energy that
should be going into your useful passband onto adjacent channels,
reduces the intelligibility of the signal instead of helping it,
and generally makes you think they don't have a clue about how
to adjust their own equipment.

If you want range, wouldn't you be better off with more RF power
instead? Obviously, linears are illegal, but so is defeating limiters
and overmodulating your carrier, which can really make the signal
"dirty". Given my druthers, I'd rather have a neighbor running
50 watts of very clean RF to them running 200% positive modulation
and over 100% negative modulation at 4-8 watts and generating
harmonics and spurious crud all over the radio spectrum.
I'd take bets that the first base station operator is less likely to
be caught, too. For what it's worth, that's my opinion. Free advice
does not come with a money-back guarantee, however, so use
at your own risk! ;)

>
>Why do hams have such a problem with roger beeps on HF when every 2
>meter repeater around has them?

The tones on 2-meter repeaters are not "roger beeps." The courtesy tones are used to allow other operators a chance to get on the repeater. The theory of operation is as follows: At the end of a transmission, when the repeater detects that a transmission has ended, it will pause for a few seconds, giving listening parties a chance to announce their call signs. After a few seconds, the repeater issues the courtesy tone, thereby signalling the other party in the QSO in progress that it is clear for him/her to transmit. Each party of the QSO is expected to not transmit until they have heard the courtesy tone.
Oh, and the tones generated by 2-meter repeaters are not over modulated, do not splatter across several KHz of spectrum, and don't carry on like some novelty musical automobile horn.

Nonsense, on HF SSB there is a complete and total absence of tones to signal the end of a transmission. HF operators depend on the context and normal flow of conversation to determine if a pause has indicated the end of a transmission or is simply a pause for thought. Of course, many HF operators signal the end of their transmission with some sort of intelligent indicator, such as "back to you", or "go ahead" or even their (gasp!) callsign!

You may see a different SWR reading due to the coaxial losses
but it has nothing to do with whether or not the antenna is reactive.
A mismatch is a mismatch regardless of whether it is reactive, resistive
or any combination thereof. There is nothing different about a reactive
antenna impedance other than the fact that it is by definition a mismatch.

Also a mismatched antenna (not 50 ohms) is not a necessary or
sufficient condition in order for the coax to become part of
then antenna.

The CLP has it right!

: but what can we do about it? Who do we report it to?

He may be totally in compliance with the FCC regulations. Consumer electronics have little protection against rf - it saves the manufacturer a few pennies on each set.

There are things you can do at your end that may minimize or eliminate the problem. For example, install a high-pass filter at the input to your TV. Buy the interference filters for phones that are available at Radio Shack, and install them on your phone lines.

There are a bunch of other possible cures. If you have access to the Web, go to www.fcc.gov and look up the pages on interference. It has a fair amount of good information - including pointing out that it is often the consumer electronics that are at fault.

Let's paraphrase this statement: "You see different standing waves
due to standing waves."

The only reason you get different readings is due to coaxial losses.
The Standing Wave Ratio is, in essense, a measure of the ratio of
the reflected power to the forward power. The only way these power
levels change is through losses.

> > but it has nothing to do with whether or not the antenna is reactive.
>
> It sure as hell does! If you are dealing with a nonreactive, 50 ohm

Now you are adding more conditions to create the perfect case where
there are no standing waves.

You originally said "reactive". How is a a reactive antenna impedance
any worse than a non-50 ohm resistive antenna impedance? The answer is
that it isn't.

> If you have a reactive load, the swr will only be duplicated from the
> feedpoint at every multiple of an electric half wavelength away!
>
> That is a simple law of physics.

That is simply not true and you cannot produce any physics to prove it.
You are confusing impedance with SWR. The impedance is duplicated
every half wavelength. The SWR is constant at all lengths.

> > A mismatch is a mismatch regardless of whether it is reactive, resistive
> > or any combination thereof.
>
> Not totally true. You can use a stub of coax to tune out positive
> reactance...

I don't see how your statement makes any part of my statement "not totally
true".

> Harder to tune out negative reactance.... Must use a coil to do so.
>
> Of course, if you have a 40 ohm antenna with NO reactance, that would be the
> hardest to tune out without a network!

You can use a coaxial matching transformer to tune out most any reasonable
impedance (e.g. no shorts or opens).

I can match a 40 ohm impedance with a quarter wavelength of 44.76 ohm coax.
But that is not what we were discussing.

> There is nothing different about a reactive
> > antenna impedance other than the fact that it is by definition a mismatch.
> >
>
> Sure their is... A reactive mismatch means that the antenna is not resonant
> on that particular frequency...

Yeah. So what?

> A mismatch due to different impedances will indicate that the antenna is
> resonant at a certain frequency, just not resonant with a feedpoint of 50
> ohms!

Again, this means nothing.

> That would be the effect of tuning for maximum field strength, rather than
> tuning via an SWR meter.
>
> > Also a mismatched antenna (not 50 ohms) is not a necessary or
> > sufficient condition in order for the coax to become part of

>
> It sure as hell is!
>
> Starts playing hell with the currents on the line! That causes current
> mismatches on the outside of the coax (in some cases), which in turn cause
> the coax to become part of the antenna.

It does not. If I terminate a transmission line with a 40 ohm resistor,
there are no currents on the outside of the coax. The current is reflected
back down (inside) the coax. A mere mismatch does not cause current to
flow on the outside of the coax; there is no correlation. Current on the
outside of the coax is caused by other factors like a poor counterpoise
or imbalanced antenna currents.

> The other side of the coin is where you use a length of coax to become an
> impedance transformer.... That is where you use a piece of coax TO BE A
> PART OF THE ANTENNA.

I would not consider a coaxial matching transformer to be part of the
antenna. It does not radiate or receive any power.

But, no matter what you call it, the original topic was not about matching
transformers; it was about the desired coax length for a 102" whip --

presumably a 50 ohm coax (not some other impedance which would be required
for a matching transformer). Changing the length of the 50 ohm coax will
do nothing to improve the SWR (disregarding the coax losses I already
mentioned). So, in light of this, you will want to simply minimize
the length of coax used to minimize your losses.

> Their are other amateur arrays that use the coax as both a tuned stub as
> well as a piece of the antenna.

Who cares? Why do you guys keep bringing up all this amateur stuff?

The pattern for the KW7 makes it look like its a voltage fed antenna.
That would make the feed point a fairly high impedance feed point.
Is it?

Toll, don't start this... there will be some people who still believe that it starts in the clouds and comes down! I love it! Some of them will argue with you till the sun comes back up.
<<<<<<<<<<>>>>>>>>>>

Actually, lightening does not take ANY path to ground.

Lightening starts at the ground and goes up!

Toll Free

I've had 5 KW-7's and 3 different vehicles. Without tuning them,
they all had an SWR of 1.5:1 or lower. I have used dual chain
bumper mounts, trunk lip mounts, a hole drilled in the bumper, and
now mine sticks out of the center of my trunk. SWR: 1.2:1. I can
talk from Baltimore to Belair or Annapolis barefoot on AM (when the
skip dies, early in the morning) I have skipped barefoot on AM.

I would doubt That would make the feed point a fairly high impedance
feed point. Not to be rude, just answering your question. I don't
have an MFJ-259. But I want one. As soon as I win the lottery or
make my first million <:

That's too bad about the 4 footer. I have a three foot one that I put on if I know
I have to use a garage to park. A wilson is better than the 3' and probably better
than the 4'. Just because my 3' has 1.1:1, it doesn't get out better then my 7'.

461. Browning Golden Eagle Mark III.....Info

Newsgroup: rec.radio.cb
Date: 1999-10-05 00:00:00 UTC
From: chrisp@trib.com
Message-ID: <7tcdcphla1@nnrp1.deja.com>
Source record: 4910

Can anyone give me some advise?

This might be a difficult question to answer via email, but here goes....

I have acquired a set of Browning Golden Eagle Mark III's (I'm guessing a receiver and transmitter) about 7 years ago. They have been sitting in boxes every since then. I also have the microphone for them. I am not a CB or ham radio person, so I know ABSOLUTELY NOTHING about how to work this collectible. Can you tell me how to test this equipment to make sure it is functioning correctly without using any test equipment? I do not have an antenna for it. I have not decided if I will keep the set or not, but I have found that they are worth a little money if working. That is the problem. I don't know if they are working.

I also have a rather large piece of equipment that I assume is an external amplifier of some sort. It has no name or identification markings on it. There are several unmarked dials on the front, and what appears to be an RF meter. There is a fan on the back and it looks like it connects to the antenna cable between the antenna and the transmitter. I don't know how else to explain it. Any ideas?

Thanks in advance for your help with this strange situation I am in.

Hello,

who has time to come?

Saturday, 6th November 1999 / Samstag 6. November

8th Rheintal Electronica (Radio and Electronics exhibition)
8. Rheintal Electronica 99 (Funk & Elektronikboerse)

Where/wo : Durmersheim (Germany, south of Karlsruhe
(Baden-Wuerttemberg/Deutschland)

exact : Haardt-Halle, Durmersheim
open : 09h (CET/MEZ)
end : 17h

How to find:
Autobahn "A5" Kassel - Frankfurt - Karlsruhe - Basel
use exit "Karlsruhe Sï¿½d / Rheinhafen" to Durmersheim, see signs

Funk-Einweisungen / Radio Assistance
CB-Radio : Ch. 15 FM (27135 kHz)
Amateur : 145.500 MHz F3E

Free parking and free Bus-Transfer to the exhibition. Please follow
the signs and directions.

Ausreichend kostenlose Parkplaetze mit kostenlosem Bustransfer zur
Ausstellungshalle! Hinweis-Schilder beachten!

The Program:

Private Sale of
-CB-Radio, Amateur-Radio, Accessoires
-Computer, Software, Spare parts
Demonstrations
German CB-Radio Museum
Dealers show
Information of RegTP-Authority (like OFTEL UK, PAR PK, BAKOM CH)
Contributions and discussions (in german language)

Auf dem Programm:
- privater An- und Verkauf von
CB-Funk und Amateurfunkgeraeten,
Computer, Software, elektronische Bauteile und Zubehoer
- Vorfuehrungen
- Deutsches CB-Funkmuseum

- Haendler-Ausstellung
- Infostand des RegTP

- Vortraege und Referate
(vorlaeufig, Erweiterungen und Aenderungen moeglich)

* GPS und Funk-Applikationen (Dr. Karl H. Ilg (DK2WV))
* Gestaltung einer eigenen Homepage (Hans Jï¿½rgen Schlager)
* Der Weg zur Amateurfunk Klasse 3 (Martina Lohse)

Well, when you think about it, it make sense to use a 10 meter radio (2510, or 2950 type) on CB. With usually one simple mod, you get the whole band with a handy frequency display. Compare this with a bastardized CB with 5 switches to work the PLL for the extra channels, which often requires a frequency counter or at least a truth chart to operate. Band scanning with this arangement is difficult. The 10 meter radio usually has other options, like memory channels, which make the radio experience, all that much more convienient. Also, a modified "legal" CB typically will not cover 2 Mhz effectively without some power output and receiver sensitivity loss at the band edges. The 10 meter radio also has FM in it, which is a cool mode to use for local talking. Much better fidelity, if set up properly.

If you're sole purpose on CB is to run on channel 19 or do the keydown thing, then a simple Cobra 25 should suffice. If you're into more frequencies and other modes, then a 10 meter radio makes sense. Especially when you consider that the intial price of the radio is not much more than a legal CB, and the cost to have it "done up" by a local tech.

> limiter.

I have no problem believing you, since many older 23 channel rigs had no limiters. But if memory serves me, the Console 2 had the same board in it as the Sidebander 2 and I know that THAT radio had a crude modulation limiter in it. It wasn't very effective if you "cranked up" the mike too far (It was more of a clipper, and sounded like pure trash if the mike was up too far, but you could overmodulate, but I can't imagine why anyone would want to sound like that). It worked ok with the supplied microphone. Many rigs of the day met FCC compliance with the stock mike, but when equipped with a power mike, the radios would overmodulate. Regardless of the status of the radio's internal circuits, you were still not allowed to exceed 100% modulation. One of the reason that CB radio have such elaborate modulation limiters today, is because people did not know how to properly set up a power mic. Now, with the factory limiter, you can't overmodulate, even with the mic cranked up. Another example of the FCC making "adjustments" to their type acceptance, to thwart illegal operation.

The bottom line here is that you were NEVER allowed to run over 100%. Older rigs did not protect themselves from people with big power mikes, but ultimately the station licensee was responsible for the spetral purity of their station. The fact that you knowingly were running in excess of 100%, makes it all the more illegal.

It's hard to preech the virtues of radio virginity, when you've got a few old skeletons in your closet. Doing so makes you a hypocrite, and undermines your credibility.

I never specified RG-8. You are adding conditions.
But I'll make my case anyway with an example:

Since this is a CB newsgroup and the topic is regarding a mobile
installation, let's consider the coax that is most typical for a
mobile CB installation (makes sense, doesn't it?).
RG-58 cable has a loss of 2 db per 100 ft.

Measuring the SWR at the transmission line input requires
measuring forward power and measuring reflected power at that
point. The reflected power first traveled all the way up
the 18' cable before it was reflected. Then it traveled all
the way back down the 18' foot cable where it is measured.
The distance up and back totals 36'.
The attenuation to travel the entire distance is roughly 2/3 db.
This leaves about 86% of the total power that would have traveled up
and down an ideal, lossless cable.

Now, let's say you have an antenna that provides an SWR of 3:1.
At the antenna, you will measure an SWR of 3:1.
At this SWR, the reflected power is 25%.

At the transmission line feed point, the measured reflected
power is 86% of 25% (0.86 x 0.25 = 0.21) or 21%.
21% reflected power corresponds to an SWR of 2.72:1.
You will measure an SWR of 2.72:1 at the transmission line feedpoint.

Do you believe that 2.72:1 is the same as 3:1?

RG-8 has about half the loss of RG-58. It would read
approximately 2.86:1 instead of 3:1.

Cross-posted to: hfx.forsale,ns.forsale,rec.radio.cb

Please read all of this post.

1. I have a WORKING Realistic TRC-458 which is a 40 channel CB base AM/SSB radio that I am selling for a freind. The radio is some scratches and a bit dirty, (belonged to a smoker). Has NEVER had any extra channels put in it.
Great radio, as it can do over 200 channels. Info on the net. It has the 858 chip.
Full service manual included (a $ 25.00 value)
Sell 1 and 2 for $ 75.00 plus shipping.
Picture avaliable ! ! !

2. A TRC-449 mobile CB radio (same board as the TRC-458) for parts.

3. A Radar Detector, manufactured in the 70s (working the last timre I used it, before the law changed).
Sell for $ 35.00 + shipping.
Picture avaliable ! ! !

4. A Kenwood KSC-4 battery charger (working) with service manual.
Sell for $ 25.00 + shipping.
Picture avaliable ! ! !

SAVE SAVE SAVE! ! ! !
I WILL ask $ 125.00 + shipping for ALL . Items sold as-is, radio have no mike.

Please reply to email as I do not often get to this newsgroup. He want to get this stuff sold ASAP, so please reply ASAP. I will reply to you Monday to Friday only.

Thank-you,
Greg

A fact in who's book? Changing the length of coax thats connected to
any antenna that not resonant or non-reactive does change the swr.
The SWR is constant alonng the length of the coax, but it does change
when you actually change the length of the coax.
Here's an example that you can use to prove your statement:

1. Folded monopole 150 ohm feed point fed with 1/2 wave of 50 ohm
coax. Whats the SWR?

2. Folded monopole 150 ohm feed point fed with 1/4 wave of 50 ohm
coax. Whats the SWR?

The original topic or what started the changing length of coax
discussion was professors statement that changing the coax length on
the coax feed to a 102" whip would cause " a slight variation" in swr.
A 102" whip is not 50 ohms, so feeding with 50 ohms coax could very
much cause a change in SWR with a change in coax length.

Are you implying that the standing waves will be different at various
points on the transmission line? Cable losses have nothing to do with
SWR readings...

I could never make such a blanket statement. Many factors affect the antenna impedance. If the antenna impedance were so cut and dried, no tuning would ever be required; they would all come factory tuned.

> so feeding with 50 ohms coax could very
> much cause a change in SWR with a change in coax length.

This is a non sequitur. It does not follow that the SWR will change with coax length. It simply does not. You keep parroting this but never make any good case for it. Give us an example. You cannot.

Yes, but not a whole lot. Standing waves are the interaction of
the forward and reflected power. If the reflected power is
attenuated by coax losses, this interaction must change.

Cable losses do affect the SWR (again, not by a whole lot). I've
demonstrated this with an example above. If you disagree, tell me
what is wrong with the given example.

Source record: 4942

Your radio is expecting to see an impedance of 50 ohms from the antenna system. You key and send a signal down the coax to the antenna. If the length of the antenna is not correct, be it too long or too short, the radio will see an impedance higher or lower than 50 ohms. If the antenna is not resonant on the frequency, or is not seen as 50 ohms by the radio, a certain amount of the rf energy will be reflected back to the radio. The standing wave ratio is the ratio of forward power to reflected power, therefore a perfectly resonant antenna swr could be measured as 1:1. A less than perfectly tuned antenna could show a 2:1 swr, and a severely out of tune antenna might have a 4:1 swr.

Your Nintendo is a Part 15 device and generates some rf. It likely is
getting in on the electrical system. It is possible that the grounding
system is not adequate. You DO have a separate ground rod for your
radio, RIGHT?? See if they are on the same circuit and wrap both
electrical wires with toroids made from #43 material.

In my Ford Windstar I found the antenna had to be run out the back of the car also or the noise was unbearable. I tried a Larson with a mount for inbetween the fender and hood and ran the coax through the fire wall. The noise was brutal. Second try with a Lil Wil mounted in the middle of the roof with the cable running through the car and out a window eliminated most of the noise. The radio is Uniden 76. Next vehicle will probably not be a Ford due to the noise probs.

Like i said "None to speak of."

Variations of a SWR reading skew much more than this with different
coax lengths on a typical mobile antenna installation. Those "skews"
are not attributable to coax losses.

Don't see where I was putting down CB operators, as a CB operator myself, that'd be a pretty stupid thing to do. What I DID do was put down the only too visible and obnoxious stereotypical operator. Guess that includes you, my apologies. Sorry if the "foo shits."
>
>Now, let's go below and find out that you are a flipping idiot that is

I am perfectly capable of thinking for myself, and have held these same opinions for years before I even thought of getting my ham ticket. I've been a CB operator for over 22 years, so I think I've been around long enough to have been able to form my own opinions.

>Sure sounds to me like Roger Beeps are illegal

Which was my opinion. See, is says "sounds to me" which should indicated that I am voicing an OPINION as opposed to trying to represent the statement as fact.

>>>>Where?? Seems to me that if they where illegal, the two type accepted

Okay, so a single 1/2 second tone is acceptable. I don't have a
problem with that either, provided said tone is properly modulated not to
cause interference on adjacent channels. My objection to the so called roger
beeps are the multi-beep sequences that one can hear 10 channels away and
which go on for 3 to 5 seconds at a time. THESE are the tones I consider to
be against the spirit of the regulation cited above, not a single short
duration tone.

>
> If the signal is a subautible tone, it

another good antenna is an inverted V.
it is like a dipole but is vertically polarized.
the only downside is that it also acts like a dipole in that it has strong radiation lobes at the broad sides and nulls at the ends.
if you wanted to, you could construct 2 of them. 1 in the north / south lobe and 1 in the east / west and switch between them for directionality but keep them as far apart as possible so as not to have an interaction problem between them.
take 103 inches of wire, 2 pieces for each antenna. connect 1 piece to the coax center conductor and 1 to the shield.
hang the end of the coax with the wires at the peak of the attic and secure the other ends of the wires at atleast a 45 degree angle toward the floor, hence an inverted V. you can either hang the rest of the coax down the middle of the V or along the shield leg of the antenna. DO NOT run it next to the center conductor leg as you will never get a match.
trim for best swr but trim BOTH wires EQUALLY about 1/4 inch at a time. it shouldn't need much trimming and check the swr at both ends of your band of choice and the center frequency.
this could be channels 1, 20, and 40 for cb or 26.515, 27.205, and 27.865 for a tri-band radio. this antenna is fairly broad-banded but don't expect miracles for much over 120 channels.
good luck.
jeff

i don't know your neighbor or his attitude but if you feel safe approaching him 1 on 1, you could tell him about the problem. he may not even know that the problem exists and may be willing to fix it, post haste.
if you don't feel safe with this route, look in the federal government listings in your phone book for the federal communications commision. there is usually a field office in most major cities.
if not, call long distance information to washington, dc and ask for the fcc.
it may take getting your neighbors involved in the complaint process to get any action because the fcc is, a lot of times, slow unless it involves a disturbance in public safety communications. you do have a right not to recieve interferance but the fcc's budget is a low one and it may take several trys to get action.
good luck,
jeff

that's no lie. if the rf police were to get out to some of these ham fests and walk around with us, if we spot a "cb" amp for sale and the seller were NOT a ham, they would probably run them out on a rail and if they were, they would either excuse the item as only for sale to a 10 meter op or ignore it all togeather.
this is my point when i say that they are so busy pointing fingers at the dust pile in our yard but won't turn around and look at the shit pile in their own yard.
they won't acknowledge the hams who do out-band cb conversions, scanner / cell mods or mars / cap mods on ham equipment WITHOUT benifit of a permit.
if you were to pull a surprise inspection in every hams house in america, i would bet everything i own that you would find as many equipment violations in those ham stations as you would find in cb stations.
maybe more because most hams, at least the ones that i've had face to face contact with, feel that they are above the law in an under-the-table way by virtue of their ticket.
hams generate, in my estemates 80 or 90% of private interferance complaints to the fcc because of their knoledge of the rules, where and how to use them and their communications comando attitude. in some cases this is a good thing but they also know that in cases such as radio mods, where they arn't actually causing interferance, their buddies won't turn them in.

Wonder if they use plate/collector modulation?
Most references I've read suggest that high-level
audio modulation of the plate or collector (or drain)
produces higher cleaner modulation than
low-level (base, grid, or gate modulation) modulation
does. Plate modulation sounds great!

If it was sold under the Radio Shack name, then why are you complaining? That means that either the Washington is a piece of crap because it was sold by Radio Shack or it's actually a good radio and your blanket statement that Radio Shack radios are no good is wrong. In case you haven't clued into it yet, Radio Shack doesn't make it's own radios. It gets other manufacturers to do it and they slap their name on it. DUH!

And yes, I do know a LITTLE about the CB radio "industry". I've been into the hobby for well over 10 years now and have had my share of different radios.

Ever think of the possibility that the amps being sold were for HF bands, probably for the 10 meter ham band and your conspiracy filled little minds just saw them as an opportunity to use them for CB? Just because of the way an amp is made it can cover frequencies to include CB doesn't mean they are intending to sell them as such. It's not like you can make a 10 meter only amp...

thank you mister moderator, you are perfectly right. when i first came to this ng, i enjoyed giving benifit of my experience.
although i am no rf guru, i have been around the block a few times and have even tripped a few times here.
the sooner the rf police get off their high horses, the sooner that we can stop dodging all of the shit that they drop all over this news group. and get back to the business of cb radio.

HOLY SHIT!!!
now i'm shaking in my shoes.
so now i've got a pile of "new" amps and "used" amps or i've tested all of my
amps on a dummy load before shipment for my HYPOTHETICAL export business.
the fcc comes in and finds scratches on the antenna plugs and ASSUMES that i've
used them???
I WOULD SUE THE PAINT RIGHT OFF THEIR WALLS FOR SUCH AN ASSUMPTION IF IT WERE
TO MAKE IT AS FAR AS LEGAL ACTION!!!
you are the only person that i know of with an SO-239 for a left ear and a
large 50 ohm resistor plugged into his right ear.
jeff

>wanted to connect two amps together!

how in hell would you paralell 2 amps in a economical manner.
i have seen some set ups where people would have a radio set for high swing, run into a dial-a-watt set at 4 watts similar to a modulator then run into a much larger amp.
it was loud enough to hear in the fillings in your teeth for miles. :):):)

my personal definition of the word "nigger"
has NOTHING TO DO WITH RACE OR COLOR.
if you match my defination of "nigger" your color will NOT be an issue.
you are a nigger REGARDLESS OF YOUR SKIN TONE IF:
1) you think that you, as a human being, are better than me. i will not be a hypocrite and say i'm better than you.
you may know more or less than i do but that doesn't make one better than the other.
2) you presume to tell me, without authority, what to do with my life or personal property. if you do, then i will procede to resist, difie or tell you exactly what you can do with your self-ordained authority.
3)if you are a holier than thou type, that't automatic. none of us are perfect.
i chose the word nigger for this because it is a terible word and has been mis-used for much too long against one segment of the population of this planet and it needed a more balanced, generalized target area to give other races the opportunity to feel the "joy" of hearing "HEY NIGGER" directed at them on a more deserving, more level playing field.

>
>Nope. Guess again. Better go back to your Gordon West books.

that depends, did he give an address in the U.S.A.? according to your post,
this entry came from a yahoo site which i believe is in the U.K. somewhere.
laws do vary from country to country and it may be a serious issue where he
lives.
it's like our movie titles sound good to us but translated into other languages
sound funny or senseless.
another example was the chevy nova. it didn't sell well in hispanic countries.
when chevy checked into the problem, the found out that nova loosely translated
into spanish was doesn't work. chevy seems to have had several problems with
this.
i knew a girl in high school years ago who was from Hungary. when she
over-heard
one of the guys talking about "blowing up my vega last week", she began to
laugh hysterically. it seems vega in hungarian is another word for penis and
the vision of the guy "blowing up his vega" was more than she could stand.

this is true but YOU should stay on the subject.
if the post says "how do i put channels in my XYZ radio" and i answer "do it like this" and you come back and say "you're wrong, do it like that", THAT is a differing opinion ON subject.
instead you come back with your bullshit about the legalities which is NOT in the question at hand which is akin to spam.
if i were to post the question, "what color is an orange?" your reply would probably be "chevrolet". get my drift now? the answer is compleatly off from the subject of the question.
if you want to post your opinions about illegal operations or fcc regs, FEEL FREE to do so. just press the new message button instead of the reply button. that would be all it would take to end this war. instead of using the reply button like a launch button, use the new message button as a forum / dialog button.

>You're in a public forum. You should get used to hearing

>>"Toll Free" is absolutly correct on these two points. Believe it or
>>not, I have received responses by "freebanders" to my CQs on 10m in the

does this mean that his ham radio was splattering into the out-bands?
if they were in the out-bands and heard his cq, this must be so.

>I have encountered and confronted this type of operator. Their attitude is
>typically much different than those found around 28.000-28.100. Whereas the
>"encroacher" will usually aploogize, say "I didn't know", and move back below
>28Mhz when asked politely,

if the encroacher is in the 28.000-28.100 code portion of the band, what are
you doing there TALKING to him on voice???
unless there is a threat to life or property, there is no variation that i know
of from fcc rules that allow you to use voice on this portion of the band. YOU
HAVE ALSO BROKEN THE LAW!!!
if you say that the fcc would look the other way in such a case, it would be
tantamount to saying that the fcc breaks it's own rules too.
to get the out-banders off from ham freqs requires a certain protocol. hunt
them down, find them, turn them in to the fcc.
in stead you took the law into your own hands, deputy, and in the process broke
the law yourself by using voice on the code portion of the band. turn in your
badge!!!
SHAME, SHAME, SHAME ON YOU!!!
i hope you had your bb gun in hand this time.

you are compairing apples to oranges.
hams give their numbers every 10 because of fcc rules and anyone who cares to
pick up a book can find your phone number.
if i were to post my phone number on the air, anyone with a general coverage
reciever could come harass or endanger my family at any time.
there is a reason my phone number is unlisted. i like my privacy. if i were to
get a ham ticket, my privacy would go out the window. i believe that the fcc
would have the right to that info, but to post it in a book that anyone can buy
is just plain stupid in my opinion.
you were stupid to even suggest it.

>> DON'T YOU THINK WE ALREADY KNOW THIS???

you must be the moron. why would people come here for this info if they thought they could find it elsewhere???
i've said it before and i'll say it again:
if you want to post your opinions on the legalities or the fcc regs, post it as a NEW MESSAGE instead of spamming the questioner with all of this bullshit!!!
if you all were to take turns posting this info once a day under a banner headline like "CAUTION" or "READ THIS!!!" or "RIGHTS AND RESPONSIBILITIES OF LEGAL CB OPERATION", then it would be always posted high on the list, prominently for all,WHO CARE, to read. that way, we could end this war in a way for all to be satisfied. you and your ilk can disseminate your message and i and my ilk can get back to taking care of OUR own business.
no one yet has answered my original question:
who gave you or anyone outside the fcc the authority to tell me or anyone what to do or not do on a NON-HAM BAND?
just because it's against the rules does NOT make it your business.
if i were to follow you around everywhere you drove and stopped every where you stopped and told you in public or private about EVERY traffic law that you may have violated, you would be right up my ass, just as i'm up anybody who plays rf police, TO MIND MY OWN BUSINESS!!!
wouldn't you? if you say no, i'll call you a liar.

>If you don't like the thread, just go on to
>something else.

this is what i've been telling the rf police for months now. if you don't like what you see, don't spam an answer, just pass it up!!!
if you pass up the "illegal" questions, i won't spam any NEW postings about fcc regs or ham opinions on the subject.
DEAL???
let me know if you agree. if you do ,try to reign in some of your ham friends

to sign the "peace treaty".

>The
>intent of most informational posts is to be====informational.

only if this were true but if you read most of such posts, you'll find a bunch of whining, preaching, smart ass remarks, or smart ass references to other members of this news group in an attempt to make others look bad. i will give you some offenseive examples:>You must be a moron
>put a cork in it and go on.
> your dumb-ass actions.
>
i rest my case. yes i too resort to stiff language but only in self defense. so, dumbass, why don't you stick a cork in it and go on before i have to make a fool out of you again. your words in this thread arn't very convincing of a ham who is trying to sell people on the brotherhood of the ham community.
if you were an asshole salesman, i wouldn't buy one from you if you had the last one that i needed.

I've never seen a "legal" galaxy radio with a roger beep in it. Most
Galaxies are exports. I'd like to see the FCC ID number on any radio
proporting itself to be "legal" with a roger beep in it. I really think
the FCC is slipping if they allow things like this. What's next, legal
radios with built-in echo boards?

> >>>>And a single tone beep (which the FCC has already ruled as being legal,

> duration tone.

The reason why you hear these roger beeps 10 channels away is because he
same people that think roger beeps are so "cool", also tend to be the
ones that clip limiters. A roger beep will drive the modulation output
to an almost perfect squarewave, which will splatter like hell, unless
the limiters are intact.

> >>
> >> Para 95.413(a)You must not use a CB station--

> >> material to amuse or entertain.
> >
> >>>>>So, the single tone roger beep is not for
> >
> >a. Music
> >b. Whistling
> >c. Sound effects
> >d. Entertainment.

I'd venture to say that the MAJORITY of operators that use roger beeps
in my area, do not do it to facilitate communications. They do it

because THEY THINK it sounds cool. THAT, to me, falls under
entertainment, or amusement.

>
> But the multiple sequence tones ARE.
>
> >The single tone roger beep is designed as a EOT (End Of Transmission) tone.
> >And, the FCC (once again, I must continue to reiterate this.. . Seems that
> >drilling is the only way to get something in your head) has ruled that they
> >are legal!

If the tone is uses as defined to signal endo of transmission, on SSB,
where there is no carrier to signal a station has unkeyed, then yes, I'd
believe that its use would be legal. Ironically, most SSBers dispise
noise makers, so they tend to avoid roger beeps. There is no need to use
an end-of-transmission tone on AM where there is a steady carrier to
signal when someone ends his transmission. The use of a roger beep on AM
is superflouous.

And this applies to single tones only. The minute you go the "musical"
note route, you have crossed the line from (Questionable) useful tool to
entertainment device, and that is CLEARLY illegal.

Since legalities have little meaning on CB radio, the fact remains that
roger beeps are damned annoying to anyone that is not anamored with
them. Same with echo's. These "noise toys" are nothing more than radio
billboards advertizing the operator "Look how cool I am, don't you wish
you were me", and usually the total opposite is the case. I tend to
avoid people that use radio to make a statement. I just want to talk to
people, and not have to listen to their toys.

>HAH!!! ANOTHER HAM WHO THINKS HE'S SO SUPIRIOR TO EVERYONE ELSE. ARE WE SUPPOSED TO BE YOUR UNWASHED MASSES HANGING ON YOUR WORDS??? I THINK NOT!!!<<

First of all, Jeff, I guess it hasn't gotten to you yet that it is grossly discourteous to reply in all caps unless you are really trying to be belligerent.

In which case you are.

Secondly, in the forgoing matter, it is only incidental that I have a Ham license. The fact of the matter is that the material to which I was responding was technically flawed.

One of the biggest rifts between the Amateur and Citizens Band services is that there is an entire subculture within CB that is trying to reinvent RF technology and propagation. Much like Orson Well's book, "1984", it creates a garbled communication of "doublespeak"

I don't think I am superior to ANY one, yourself included. But I also am not about to kowtow to someone who is either blatantly trying to hogwash otherwise unknowing persons about basic RF practices, or is himself unaware and is trying to bluff his way through it.

Hey Jay, long time, no hear. CB is being destroyed by nits who somehow think they can do anything on the radio without regard to others. Amplifiers are the biggie here, because many of these guys can talk a lot farther than they can hear and as a result, they are trashing the channels for everyone else. Never mind that they claim otherwise. Chaulk it up to ignorance. My advice to operators is accurate and well based. Unlike some folks here, if I don't have some good advice for a problem, I try to keep my mouth shut. Wish you and others could do the same. I'm glad you are entertained by my words of wisdom to the newbies. At least I provide advice to problems. If you did the same, you might have a better reputation. Just, please, don't tell new guys it is just OK to buy and use an amp in their truck.....it isn't OK.

Jay wrote:

Jeff, I'll be happy to tell you. Every CB operator on the band has the responsibility for behaving properly and for not deliberately causing interference to other stations. Your responsibility is to operate within the rules and laws which regulate CB, whether you agree with them or not, whether you like them or not. Nobody gives a rat's ass if you like it or not. If you or anyone else is to use CB, you are to exercise due diligence to operate properly. CB is already sufficiently congested without high power and noise makers. If you need someone to hold your hand so that you can follow the rules, I have immense pity for you. You never grew up. Your mommy is still holding your hand. Boo.

As usual, you have wandered into territory you know nothing about and shot your mouth off.

The FCC has no problem with hams making a simple, short announcement which states something to the effect of "this frequency is reserved for the exclusive use of licensed amateur operators" or something of similar content.

I'm not going to argue this point with you any further. If you want a second opinion, call or write the FCC and ask them yourself.

Maybe he IS on the radio? Many people can multitask. It only takes seconds to write a 200 word reply to a thread. How many lulls in radio communication are there in your area? If people have a hard time listening to motormouths then they shouldn't be on the radio as most of the operators I hear are motormouths who never shut up. From the Hams I have seen posting on this group they have the same problem to a greater degree.

OK... get ready.

Ladies and Gentlemen.... Load your cannons.

This Sunday:
12:00 - 14:00 GMT Kp465 Doug in England
16:00 - 18:00 GMT Kp2o3 Peter in Florida

NEXT Sunday (10 Oct.) Kp 37 Francis... French Guiana

The Net Frequency will be 27.580 USB.

In the event that 27.580 is not usable, please
check .590 or 570.

Hopefully, good conditions will prevail.

The Net will need your support, so
if at all possible, please try to check in.

Remember, the NET period is 9 consecutive
Sundays, so If you can't attend this Sunday,
you can listen in ANY Sunday until November
28th

For up to the minute information about the Net,
click the line below.
http://www.gate.net/~kp/Pg.Net.Page.htm

Or, simply go to the Kp Web Site.

http://www.gate.net/~kp (click the International Net button)

Please be reminded that QSP check-ins ARE allowed,
however, use of the Internet is NOT allowed. You must
make direct or indirect contact with the controller by
RADIO.

Have a nice day... Hope to hear you soon.

If I install a 2000 watt amp inline on my cb that works perfectly fine but throw the microphone in the trash and just use the 2000 watt amp because it has a good preamp and I enjoy listening, is this illegal? This is assuming that there is not a single microphone in the whole house.

I'm going to purchase a tx-400 amp from my girlfriend's dad.....the problem is I don't know how many amps this amp draws and how many is too many before having to get a higher amperage alternator? Can someone help? I had a palomar 225 in there at one time, and it worked good, but that's a totally different story seeing how it's only about 175 watts and doesn't draw much amperage...
Thanks,
Jack

if you have a ham liscence with HF privilages(assuming its an HF amp and radio)
than its not illegal.

I told some of the Ch6 operators at the Chicago keydown that I could
'read their mail' here in the UK when conditions allow.

Unlike any other CH, including 19, when conditions are running and
someone strong keys up on your side the Ch is 'fully quieting'. It's as
if they're sitting in the passenger seat of my mobile having a cup of
coffee.

Like you, there is a language barrier:-)

>into another 4 pill!
The big Skywalker is in fact made up with 2-pill modules. Four of them
to give you the 1200w amp.

If you have a good quality soldering iron, can use it properly and can
read English anyone can build one.

If anyone on the group wants to build an amp and pretty much fully
understand how it works afterwards, then I can recommend getting one of
Lee's kits.

I have no connection, but have had several and still run his 8-pill.

No circuits included, The build manual explains everything. it's his
manual that sells the amp!

How nice of you to offer help.

Tom,

The Ringo Ranger should be operated with a ground, as it is a shorted antenna.

It may give you a slight change in bandwith / SWR, but that would also depend on the installation.

It WILL give you better range in that the static level may be reduced by proper grounding, as well as help to kill some bleed problems.

Also, try wrapping 8 to 10 turns of coax in a 12 inch circle immediately below the feedpoint of the antenna..... This will serve to act as an RF choke and help with reducing the common mode currents on the outside of the coax.

As to your linear, an AM radio with a 50 watt amplifier should run fine on a 10 amp power supply.

For an SSB radio, I would use no less than a 15 amp supply.... And a 15 amp supply would be better for the AM only scenario... Just thought I would give you worst case and better case.

Hope this helps.

603. What's the big deal? (was: Re: GrantXL MOD Question)

Newsgroup: rec.radio.cb
Date: 1999-10-06 00:00:00 UTC
From: Bill Eitner <kd6tas@netzero.net>
Message-ID: <37FC0315.7367ED08@netzero.net>
Source record: 5102

I don't know whay so many people are worried about removing TR24 in a Grant/148.

Here's the big secret that (I guess) nobody knows: Start with the mic gain (dynamike on Cobras) set to center slot (that means the slot or dot on the knob points straight up). Then, if you need more or less audio you adjust accordingly. How tough is that?!

Forget the resistors, forget R131, forget the "modulation" kits, just remove TR24 and learn how to CONTROL the mic gain from the radio's front panel. Grants and 148s have been around for over 20 years. In that time, removing TR24 has ALWAYS been the most common mod because it gives control of the mic gain to the operator in ALL modes. In the old days, being an "operator" meant just that; the person knew how to OPERATE a modified radio. That means not running the mic gain wide open when it's not advantageous. Today it seems like the mods have to be idiot proof because today's operators are all idiots.

I'll spell it out again: Remove TR24. Set the mic gain control to center slot (midrange) and adjust as needed based on what you hear on your monitor receiver (you have a monitor receiver don't you?!) or what info you can glean from radio checks given by people you can trust. ALWAYS set the mic gain at least 25% lower when talking on SSB. That little rule is important and probably why the bullshit R131 mod became popular recently. Operators today don't understand that on SSB distortion is amplified. You HAVE to decrease the mic gain by at least a quarter if not a third when you're on SSB compared to when you're on AM. If today's operators understood mic gain there would be no controversy over removing Q24 in Grants and 148 and Q32 in 2950s and high-end Galaxys.

I disagree.

> The hams you've had "face to face contact with" must be
> KD6TAS and KD6VXI....

I've had contact with many "fine business" hams that
have their stories to tell (with pictures to prove it)
about their "wild times" when you can gain their
confidence. MUCH MUCH more than legal power levels
on HF bands like 40 meters are the most common. BIG
power on 10, 15, and 20 when contesting is also very
common. How many hams that have earned DXCC and higher
honors have done it legally in the last 10 years? If
you say anything more than 30% you're a fool. 10% is
more like it, and we haven't even touched the iceburg
of antenna violations.

You need to get with the program.

Yes, their are ways to open the chassis up...

Don't install the diode... Makes it sound like shit.

I have worked on a couple of those chassis for people on the newsgroup, and they can be made to operate nicely (deadkey 1.5 watts and swing 20+), but the mods are not for the faint of heart.

One of the few things that we agree on.

>
> Hmmm. Let's go back to one of your earlier statements: "If you can't
> mathematically prove your statements, their is something wrong..."

And your point is?

I suggest you get a TDR and find out the correct correlations between coax
length, SWR, reflections and other variables that affect the operation of a
station.

You like to spout off numbers, but so far have prattled only BS.

If you really want to see the losses and reflected losses in a piece of Coax, purchase a TDR.

I have used one in the past, and they prove you wrong.

Have a good one.

> 1) SWR meter is not calibrated for 50 ohms
> 2) Coax is not rated characteristic impedance

Gee, let's look at more reasons that are real world, come to life more often than not, and would REALLY have an affect on operations...

1. You are using "ends" or terminations (PL-259) on your coax that do not keep a continous impedance path on the circuit....

2. The transformer in the SWR meter is not completely accurate... This is a big problem with people. You can have an SWR meter that reads 50 ohms, but the transformer is not wound correctly, uses the wrong material in the core, or other problems.

3. The diodes in the bridge have not been matched. Seldomely done in MOST commercial designs.

I can go on and on, but I do believe that this proves a point.

>
> Regardless of which case it is, there is no good reason to modify the

> are unpredictable.

Wait... Just a couple posts ago, you stated that they where totally predictable and that you could figure out any length of a specific piece of coax and use it for a transformer.

Which is it.... The rest of us would like to know when you make up your mind.

Hi,
I would like to know the uses of a 40 channel CB Transceiver. And
also what exactly this device is. I believe it is a 2-way communication
system. Does this also behave as a radio? Just curious to know if it can
be used in emergency (say..if you are trapped in a car in snow...).

I understand that one can't dump 10 pages of text in here...so, if I
can get a web site which answers my questions...it would be helpful.

Thanks,
Vathsan.

Hey Toll,

Did I miss a photo?

I went to that site, thanks, but no mention of Mitsubishi.

What connection is there between the two companies.

I've e-mailed them requesting a tech data sheet.

On the site they mention an even meatier unit, 500A @ 28V.

Surely there can be no stopping P. Dahl re-winding the primary of his mobile CH6 transformers to cater for this beast - it'll win the single alternator hands down.

What do you think?

ALC is automatic level control for SSB and AMC is automatic modulation
control for AM, dorking with these will probably cause splatter.

at the age of these trucks, especally if you live in the salty winter north,
you may have corroded grounding straps between the body and frame.
they mount the bodys on rubber shock mounts to reduce road noise and install
ground straps usually between the engine block and firewall. your negative
battery ground runs right to the engine which is also mounted on rubber mounts.
if you loose the ground straps, everything in the cab / body of the truck tries
to ground through the rear axle, drive shaft and transmission to the engine
block which is spotty at best due to the oil coating on the rear end gears and
trans. gears. if you replace / clean the ground straps, you'll find that your
lights are brighter, your swr should come down and your dash board radio may
sound better with less static on fringe am stations.
good luck
jeff

> plus s/h from 48089 MI Thanks.

There are a lot of hams who make it their business to market amps to CBers on a regular basis for profit.

But I think a majority of hams do not think twice about CBers -- figuring that what happens on 11 meters is none of their business. When these folks sell their old equipment they take a "what I don't see - I can't disapprove of" stance.

There's been a lot of discussion whether this is responsible behavior or not. On the one hand, it's up to the individual buyer to stay within FCC rules. On the other hand, hams may be (unknowingly) contributing to the trash on 11 meters by putting amps into circulation among CBers.

It would be interesting to hear some honest, non-biased and non-flaming opinions on this issue.

no, i'm not bored. quite the contrary i live for this news group. the only
boreing thing about this whole thing is having to ask the same question over
and over again to block heads like you but for you benifit i will ask it one
more time:
WHO IN HELL DO YOU THINK YOU ARE TO TELL ME / US WHAT TO DO / NOT DO ON A BAND
OF FREQUENCYS THAT DON'T EVEN CONCERN YOU AS A HAM OR CB OPERATOR. YOU HAVE
ZERO AUTHORITY TO TELL ANYONE ANYTHING ABOUT LEGALITIES UNLESS YOU WORK FOR THE
FCC, PAY OUR FORFITURES OR ARE SOMEONES MOTHER!!! UNLESS YOU'RE HOLDING BACK
INFORMATION ON ONE OF THESE THREE SUBJECTS, SHUT UP!!!
if you read ALL of those 33 posts, you'll find that MOST of them were in
response to other things that i've written.
are you going to be a hypocrite now and tell me that i shouldn't be here after
we all hashed the "who has the right to be here" subject 2 months ago?
if the high and mighty hams have the right to come here and post spam, off the
subject, responses to others questions and have their noses up our asses, then
i have the right to be a barbed thorn in your / their ass also.
meanwhile, i still haven't heard an answer to the above question.
jeff

Grounding should not have any important effect on your SWR or range with
this antenna.

The TX 400 will do just about exactly double what the Palomar 225 did.

You can run that fine on a vehicle with a 30 amp alternator.

Yes, the Johnsons use plate modulation, and yes, you are right about high level modulation producing a better sounding transmitted signal.

Two tubes driving three or four (depends on the model) 6146Bs.

You can also replace the rectifiers in them with solid state ones and get better, cleaner, louder audio (as well as a couple more watts).

Total price of parts is on the order of 20 dollars. About 5 or so if you know how to wind the combiner and splitter.

Much less expensive than replacing a pair of 250s with a 500.

Why email you....

A splitter and combiner is no secret!

I explained how to do it a week ago and it was done.

I can also vouch for Phil's technical expertise... . He can do it himself.

Why?

It is a single stator alternator, so they cannot NOT allow it!

If they did, I would demand my dollars back and walk off the line, as would others.

Besides, this is a DC output alternator...

Run it in AC sky with a gang of batteries in the back!! ;-)

Toll Free

You can't mix 75 / 50 ohm components / equipment and get an accurate reading
/ measurement. For your test results / readings to be correct, you have to

use 50 ohm components with 50 ohm equipment, etc. It's like taking pain pills to hide a syptom instead of correcting the problem. You have to correct the condition to avoid a serious problem down the road.

> I've never seen a "legal" galaxy radio with a roger beep in it.

Then you have never seen a 949 or 959. I was surprised as hell when a gentleman in California sent me one.... Out of the box... Labeled on the front panel (along with a variable output power knob... Both functional out of the box), and an FCC ID plate on the back of it.

They only do 40 channels, with the RCI MB8719 chip in them.

Most
> Galaxies are exports. I'd like to see the FCC ID number on any radio
> proporting itself to be "legal" with a roger beep in it.

The 949 and 959.,..... For about the millionth time.

I really think
> the FCC is slipping if they allow things like this

Why? They can be used in a useful manner.... Not that everyone uses them in that manner, but they can be.

. What's next, legal
> radios with built-in echo boards?

Doubtful.... Too many manufacturers of toys would be put out of business! ;-)

>
> The reason why you hear these roger beeps 10 channels away is because he
> same people that think roger beeps are so "cool", also tend to be the
> ones that clip limiters.

That comment, I will agree with. It is most unfortunate, too.

A roger beep will drive the modulation output
> to an almost perfect squarewave, which will splatter like hell, unless
> the limiters are intact.
>
> I'd venture to say that the MAJORITY of operators that use roger beeps
> in my area, do not do it to facilitate communications. They do it
> because THEY THINK it sounds cool. THAT, to me, falls under
> entertainment, or amusement.

Yes, but that is your opinion, and for that one opinion, I can counter that properly used, a roger beep can be useful.

I have used them before, and they do help.... If they didn't, would NASA use them?

> If the tone is uses as defined to signal endo of transmission, on SSB,
> where there is no carrier to signal a station has unkeyed, then yes, I'd
> believe that its use would be legal. Ironically, most SSBers dispise
> noise makers, so they tend to avoid roger beeps.

Don't work much international sub 1 s unit DX do you?

There is no need to use
> an end-of-transmission tone on AM where there is a steady carrier to
> signal when someone ends his transmission.

Don't work much weak signal DX on AM, do you

The use of a roger beep on AM
> is superflouous.

See my comment above. They can be useful their, also.

>
> And this applies to single tones only. The minute you go the "musical"
> note route, you have crossed the line from (Questionable) useful tool to
> entertainment device, and that is CLEARLY illegal.

Agreed.

>
>
> Since legalities have little meaning on CB radio, the fact remains that
> roger beeps are damned annoying to anyone that is not anamored with
> them.

That is your opinion only. Please keep to facts here. Opinions are
like....

Same with echo's. These "noise toys" are nothing more than radio
> billboards advertizing the operator "Look how cool I am, don't you wish
> you were me", and usually the total opposite is the case.

It has also been shown that under weak signal work, an echo, PROPERLY
ADJUSTED can help to bring your signal out of the noise (really, it makes
the other operator strain to hear you... And it isn't true ECHO, but you
set it to be more of a Chorusing effect).

Actually, dumbfuck, I don't have a MARS / CAP mod to anything but my HF rig...

The rest of the bands (and I have capabilities from 6 meters on up) are strictly legal and legit, unless needed to open up the RX section.

Thankfully, Alinco usually has a seperate mod for opening up the RX section..

I run power. That is what excites me.

Not frequencies.

Get it right.

I made a dipole once for the heck of it. Hooked it up 4-5' above the ground between 2 fence posts. Used it awhile and then tried putting a 6' X section of chain link fence under it. It worked great. The signal went mostly straight up, I was talking to Australia and Hawaii,etc during the day on ssb 12 watts.

Everyone knows amps on 11 meters are illegal. So what? So we have the holier-than-thou schmoes out there trying to convince us that we ought to change our ways. Look, I,ll make it real simple 4 u self appointed cops and monitors or whatever the hell u refer to yourselves as. We know the risks, if we take the chance, most of us are ready to deal with the consequences should the heat come down. I have respect for MOST hams, but I achieve the same results at a fraction of the cost. If I bleed a neighbor, all they have to do is knock on my door. We will work it out. I have been in the same area for quite some years and have no problems. If I am not hurting anyone, why the hell should you care WHAT I do? The bottom line is you shouldn't. Get a life. You guys that bitch about us freebanders and "peaked" radios have way too much time on your hands. I don't need to run anymore than 30 watts where I am located and I talk all over the world......yes.. on the freeband. Nothng pleases me more than one of you cb rambos to come in to my conversation and start preaching about rules. God, I love to squash you suckers.

> to sell them as such. It's not like you can make a 10 meter only amp...

That's a nice way of looking at it, but it's 180 degrees
from the truth. In truth, the amps were designed SPECIFICALLY
for CB with the LOOPHOLE that they'll also work as wideband
HF ham amps. That loophole was closed in the middle 70's.
Think about it. How many hams in the 70's needed 4 watts
in/100 watts out amplifiers? They were probably selling
at a 1000:1 CBer to ham ratio. It's MONEY that matters.
In the 70's there was money in CB. Companies sprung up
overnight hoping to cash in. CB amps are CB amps. Your
post represents a nice sentiment--but it's wrong.

That statement is not entirely true.

You feed a center fed dipole with a transformer made of 75 ohm coax. Take the SWR measurement at the feedpoint of the coax.

The Coax acts as a transformer in this case... As it does if you put any antenna that has a reactive component on the end of the wire....

If you don't like CB get a Ham ticket. It's that simple. I will admit about a year ago I was very close to getting my own ticket. I even learned Smoke Signals...err, Morse Code. I got a receiver and an old 2-meter walkie talkie and I listened. Guess what. They do the same things on the amateur bands as what goes on CB. Don't think for a minute that "Big Strappers" are only on CB. I heard "Ray" (I forgot his callsign) in the NV/CA/AZ area key his station Friday night and, the damn thing had four loud relays on it! What's up with that? A week ago on 2-meters These two fools were fighting because one guy damaged the others equipment by causing it to stay keyed longer than it could handle. Nice. I fact, I thought it was kind of funny. Speaking of funny, 2-meter should be high on the list of things in need of repair. True insanity. This is a job for......THE RF POLICE! (How do all of them change into their spandex in one phone booth at the same time?). Anyway, someone will come along, armed with a callsign and all your personal info (which is posted all over the internet) and theaten the individual some sort of "I'll tell on you" statement. Not exactly what I had in mind. Some of these people would rather whine and cry about the same thing over and over again. The mentality is truly sad when you have to run and tell Mommy when things don't go your way.

No, they are not completely seperate.

If you have a slice of coax that is acting as a transformer, then you never know the true feedpoint impedance.

I HAVE seen cases where you had a reactive load, and a specific length of coax would make it look like their was a true resistive load at the other end...

Tell me how their are two different things.

You are approaching the worthless category. Have a nice day. Since you ahve continued to prove that you don't know what you are talking about, and have no inclination to learn (I do this by real world installations, common knowledge, and simple textbook theory), I refuse to battle with you any longer.

You keep going on in life thinking that the .01 ohm resistance in a piece of coax is going to change your SWR.....

The rest of the broadcast community knows it doesn't!

My I-MAX 2000 works fine. I took it down and put up a Jo Gunn Son of a Gunn and it was nothing compaired to the I-MAX. I took the jo gunn back down and kept using the I-MAX. Much better receive and transmit on the I-MAX. No more jo gunn's for me.

The first 2 Kp NETS are complete.

The results are posted on the Kp Web Site.

Click below if you are interested.

http://www.gate.net/~kp/Pg.Net.Scores.html

Next Sunday: (10 October)

12:00 - 14:00 GMT = Kp465 Doug - England
16:00 - 18:00 GMT = Kp37 Francis - Fr. Guiana

27.580 USB

8 more Sundays remaining.

It's nice to see that Gary seems to deem Jay in the
same league as "THE BIG BOYS" I rarely see him post on anything
other than antenna subjects or interference or something along those
lines. I don't think I've ever seen any post on "How to get
that big linear" or "Go buy a linear, you'll get out better"
Virtually all his post pertain to antenna situations, and being
that is the most important part of the system, anyway you can
make that perform better is good by me and probably most people.

Yep, and the model of that radio was TRC-490. The same basic chassis as
the Uniden MB8719 radios.

Many Radio Shack radios were made by Uniden. I used to get a kick out of
some "radio-know-it-all" giving some guy the dirt about his "crappy"
radio shack radio, while talking on his "wonderful" Cobra. All the while
they were both the exact same radio in a different case. Some people are
so easily swayed by marketing hype.......

Ok, I'm now one of the informed. Roger beep aside, how does it get FCC
approval with variable wattage? Who's paying off who here?

>
> They only do 40 channels, with the RCI MB8719 chip in them.

But easily convertable with that chip.

Yes, it is my opinion, but an opinion based on accurate observation.
When guys are talking around town, on AM, with > +10 over S9 signals,
there's no "need" for a beep. Therfore they are using it purely for the
"amusement" factor.

> Don't work much international sub 1 s unit DX do you?

Nope, I burned out of DX after running it in the late 70's (I did it
once, there's no challange to do it again). Today, I prefer roundtable
conversations with locals that I know. But if you are truly into weak
signal SSB dx, then and only then, is a beep tone justified.

>
> There is no need to use
> > an end-of-transmission tone on AM where there is a steady carrier to
> > signal when someone ends his transmission.
>
> Don't work much weak signal DX on AM, do you?

I have NEVER worked a signal on AM where I can copy their modulation, but be so weak that I can't distinguish when their carrier drops. If I can't "hear" their carrier, I can't hear their modulation either. I don't try to carry on a conversation with someone when I can only hear every other word or so. That is an exercise in frustration. I'll wait until they get closer, or the conditions improve, (or they throw a few more logs on the fire).

> The use of a roger beep on AM
> > is superflouous.
>
> See my comment above. They can be useful their, also.

I'll agree about their usefullness on weak signal SSB, but I don't buy it for AM, for the reasons stated above.

> > Since legalities have little meaning on CB radio, the fact remains that
> > roger beeps are damned annoying to anyone that is not enamored with
> > them.
>
> That is your opinion only. Please keep to facts here. Opinions are
> like....

No, read my statement carefully. It is a statement of fact. If you like roger beeps, then you don't mind hearing them. If you don't like them, then they annoy you. If a little consideration and courtesy were a little more prevelent, then those people that have those beeps would restrict their usage to those (relatively few) times when they could be considered useful.

I have local who runs his roger beep all the time, until he hears me. He knows that I don't like hearing them, so he turns it off for me. While I appreciate his gesture of courtesy toward me, I've never heard anyone else ask for him to turn it on, so why run it at all? If it bothers me (and I'm very frank about what bothers me) it must bother other people, many of whom are not as forthright as I am. They would probably be more toleable if they weren't so darned loud. You try to set a comfortable volume, for people's voices, and the beeps are much louder. I've already woke up my wife late at night because the beeps travel though rooms, even though I had the volume down low.

A properly adjusted speech compressor will acomplish the same thing,
without making you sound like you're talking in a tunnel. If people were
REALLY concerned about enhancing their copyability, then they wouldn't
run their echos up so high so as to make them harder to understand. No,
I'll stick with my thoughts on their "value" only as a "toy".

TR 24 is the common "shunt limiter" for both the AM and SSB circuits.
Removing TR 24 is a bad idea, since it leaves you with no control for
SSB power or AM modulation.

I prefer leaving the limiter in and adjusting the AMC and ALC pots for
optimal modulation without distortion.

THe 2950 is a pretty good choice for a 10 meter-type radio. The latest versions have overcome earlier problems with the microprocessor resets, and short backup battery life. There were also problems with solder joints on the regulators.

That being said, the radio performs well. The receiver sensitivity is very good, and uses varactor tuning to track through the full frequency range. The adjacent channel selectivity is not as good as some other radios, but if you aren't in a major "bleed city" metro area, this may not be a problem. The noise blanker leaves a bit to be desired, and may have been improved in later models. I own an 8 year old version, and it has been fairly reliable. The only time it quit was for the aforementioned cold solder joint problem. A touch of some new solder and it was good as new.

Feature wise, I prefer the 2950 over other 10 meter radios. Performance wise, I prefer a Uniden HR-2510.

Tandy and Scan Shack Update: 07 OCT 99

----------) U P D A T E (------------

Hello all;

To keep the thread to a minimum I have provided an up to the minute update on this whole issue.

As the creator of several scanning related sites, mailing lists and articles I have been sought out by friends, associates and users of my resources. In an effort to provide factual information I contacted Mrs. Angle of Tandy Legal the purported author and sender of the email to the Scan Shack which disclosed the alleged misuse of the word "shack" the provision of "unauthorized modification information"which was viewed by Tandy as a dedicated and major purpose of said site and Tandy Companies possible action should the site remain so named and so oriented.

On Wednesday, October 6, 1999, a call was made to Mrs. Angle and a followup call later made to confirm her receipt of the alleged email sent by her on Tandy's behalf.
Mrs. Angle initially stated that "email could be faked and without it she was unable to comment."

Subsequent calls to Tandy Legal and Media Relations went unreturned Wednesday.

This morning another call was made to Mrs. Angle who immediately stated that Media Relations would provide any further details regarding the matter at hand, regardless of her earlier agreement to provide confirmation or denial of the alleged email and the subject thereof.

The call was transferred to Media Relations where the Manager, Mr. Tony Magollas who was unavailable but would be returning my calls in response to the Scan Shack issue.

In contact with the operator of the operator of the Scan Shack it appears that he believes the email was in fact sent from Tandy and has already taken the site off AOL in expectation of legal action by Tandy, he expressed the sentiment that the work required to remove, update and reinstall the site was in his opinion better than facing the Tandy Company in a legal battle over the semantics of his sites name and content.

As we provide these details we are awaiting comment from the Media Relations Department of Tandy Company in Texas.

When statements are issued from Tandy and confirmed they will be posted to the ScanPB site, newslist and here.

In this time we can only hope that users will contain emotions and await factual information which can then be processed in an appropriate manner.

Please stay tuned for further information and updates.

Thank you,

Bill Ames;

I was wondering if anyone else has come across this problem. I have a Wilson 1000 trunk lip mount antenna on my 1998 Ford Crown Victoria. When I hooked up the SWR meter I couldn't get anything better than a 3. I took it to the radio shop and the tech there told me to push on the trunk lid. When I did the SWR when down to where it should be right around 1. I've tried just about everything to get a good ground with this set up but it is really frustrating everytime I hit a bump my ground connection cut out. Has anyone else overcome this obstacle?

Thanks

Well, while you are getting your on-line education, why don't you invest
in some education on sentence structure and a spell checker?

Or is that too self-important, empty and brainless?

Steve

712. "Swing" defined... DSB-SC

Newsgroup: rec.radio.cb
Date: 1999-10-07 00:00:00 UTC
From: Professor <bgriffey@my-deja.com>
Message-ID: <7tit25$6ks$1@nnrp1.deja.com>
Source record: 5096

Amplitude Modulation (AM)
Amplitude Modulation occurs when a voice signal's varying voltage is applied to a carrier frequency. The carrier frequency's amplitude changes in accordance with the modulated voice signal, while the carrier's frequency does not change.

When combined the resultant AM signal consists of the carrier frequency, plus UPPER and LOWER sidebands. This is known as Double Sideband - Amplitude Modulation (DSB-AM), or more commonly referred to as plain AM.

The carrier frequency may be suppressed or transmitted at a relatively low level. This requires that the carrier frequency be generated, or otherwise derived, at the receiving site for demultiplexing. This type of transmission is known as Double Sideband - Suppressed Carrier (DSB-SC).

>> stick.
>> to them and their ilk, i have just 2 words:
>> GET FUCKED!!!
>> jeff
>
first point, you and rfenforcer really need to get out of preschool and stop
making references to peoples mothers. if mine is holding my hand, it's by long
distance from heaven so if you can't debate 1 on 1, get out of the business.
second point, i don't use or support noise toys or roger beeps. the only radio
that i have with a roger beep is my 2510 which came with it and it stays off so
don't try to hang shit on me to cloud the issue.
third point, i have seen NO laws written for cb, only RULES so get your
mis-information straight before you start to spread it around.
forth point, you and the rf police seem to give a BIG RATS ASS wether we like
the RULES or not or we wouldn't be having this conversation right now, would
we.
so again, get your shit straight.
fifth point, while you're looking at the dust pile in my yard, look over in
rfenforcers yard and recite part 95 to him when you read his post about how he
claimed to have caused interference and damage some time back with a 1976 model
radio which had NO MODULATION LIMIT and claimed it was LEGAL when he swung his

beam right at his neighbors house and cranked up his d104 mic.in return for a complaint that his neighbor confronted him with. he tried to hide behind his cb lic. at the time by saying it was LEGAL because he had a lic. although he was DELIBERATLY causing interference by his own admission. even if the radio wasn't designed with a mod limit, he was still required to keep it under 100%. if he had, he would not have caused said interference. go get a shovel and dump truck and clean up his yard and your brain, (teaspoon for that), before you bitch about my yard.
sixth point, i never said that i condone interference on the cb band. again, you're trying to hang shit on me but it just drops of and back on to your shoes.
you act as though i get on the cb and use no manners or protocol of any kind. your shit is showing again. you've NEVER heard one of my transmissions so your credibility is dying of tounge cancer.
seventh point, as for your exortation about the rules and responsibilities of cb use, i have to concede that you are right. they do exist, BUT you still haven't answered my question yet.
my question to you Gary Danaher is who are YOU and from what authority in the constitution or any other legal document, do you derive the RIGHT to tell me / us what to do / not do with our lives or property???
the only right that you have in this whole matter is to go to the fcc and lodge a complaint against me / us and let them do their job. just be sure that you have suficent evidence though or you may find your self in court for malicious prosecution.
eighth point, as for the boo at the end of your post. the only ones crying here are the rf police and like minded hams. we arn't crying about you and your activities. we are the ones the are holding the crying towels and baby bottles for you. so take a nap, you'll feel better in a few hours.
or did i mis-understand the meaning? was that boo meant to scare me?
the only way that a pussy like you could scare me is if you pulled up to my door with a tank, but then you had better take your best shot. it's the only one that you'll get.
jeff

>If you don't like CB get a Ham ticket.

i didn't like the shit attitudes of the stuck up hams so i started collecting cb's, (54 in all,41 modified). if the rf police arn't careful, i'll find out where they live and sell off my collection for $1.00 each to their neighbors. they are all clean radios but i can fix that. a great sacrifice to me but well worth it.

>This is a job for......THE RF POLICE! (How do all of them change
>into their spandex in one phone booth at the same time?). Anyway,
they don't, the fcc controls telephone service and had made this practice against the rules. and they would NEVER break the coveted rule bible. so that they can be always vigalant, they wear their spandex and panty hose under their tu tu's all of the time always ready to save us from the evil RADIO PHREQ who turns up his output up to an ear-splitting 4.5 watts and his nasty sidekick MIKE who runs 101% modulation, (ON THE OTHER SIDE OF THE COUNTRY FROM THEIR GUANO FILLED BAT CAVE).

The mag mount is the antenna that is used it is called this because it has a
big magnet at the bottom to hold it to the top of the cab.There are other
types e.g. mirror mount, connects to your wing mirror and gutter mount these
connect to thr guttering on to of the cab there are also a few others but
these are all ihave seen on lorrys

The unit is just the cb that you want

Im not sure about the voltage dropper but I think it is used to drop the
voltage of the battery (I heard they are 21v or 24v or something like that)
to the 12v that the radio uses to run.

hope this helps

Dakside

John,

I liked what you had to say, but I want to add some of my thoughts.

>Maybe that way CB will once again be the quiet and peaceful
> >way for nearby neighbors to communicate. If you want to talk all over

Lets face it, the FCC made a fatal mistake of putting
CB in the HF band. To make matters worse, they put it
where the MUF rarely gets below - right on the edge,
perfect for world-wide DX! I am too young to know
why they put it there - but it doesn't take a expert
to know its the worst place it could be.

To the orginal author - do you think taking away amps
will make your radio any quieter? At a sunspot maximum
its possible to inadvertantly talk around the world
with a walkie-talkie putting out a milliwatt!!!!!!

Even if everyone completely obeyed the rules - its still
going to be unbearably noisy when everyone is crammed into 40 channels
and has 4 (!) watts to work with.

> >you too stupid??
>
> Well, I've run a fully LEGAL operation on CB for 24 years (since
> 1975), so the question is irrelevant, but just the same, the answer is
> NO, since just last month I obtained my Technician class amateur radio
> license. My callsign is KC2FNG. And, I agree with you in that the CB
> band, on which I am still active BTW, could use some serious cleaning
> up. However, I'd like for someone to post this FCC announcement or at

> FCC announcement, because I seriously question the FCC's ability (and
> in one instance, its legal authority) to do what your post indicates
> the commission has announced it intends to do.
>
> 73 de John, KNY2VS, KC2FNG
> http://www.buffnet.net/~kny2vs/welcome.html

I understand most Cbers don't really care too much about
the technical side of radio, but I do. And what's more -

11 meter freeband is more "Amateur" radio than Amateur radio itself!!
Freebanders have developed their own worldwide callsign scheme -
that mostly everyone follows (it was developed by a group called
"ALFA TANGO"). Callsigns are like this

2 RP 789

Where 2 is the country code,
RP is my radio group (or club)
and 789 is my unit number.

Find this in a handbook!! And thousands and thousands of
people follow this! Also, 27.555 USB is known as the
"call frequency" - you call CQ there, and QSY when you
make a contact. You can always find out if 10 meters is
open and being wasted - check 27.555 USB - it always has
action. You would not believe the number of Austrailian
stations on there (43 division, by the way). The whole
division (country) list is available at http://www.alfatango.org/

Next, practically every radio that transmits above 27.405 had
to be hand modified to do so - you don't just call up
radio shack for this! You either have know-how, or know
someone. Even most antennas have to be modified to transmit
out of CB.

I myself, love 11 meters. After listening to 80 meters
at night, say HAM radio is no better or worse.

I used to DX on 11 meters, I do not anymore, I strictly Short
Wave Listen. Someday, I will get my HAM ticket - when
the out-dated CW requirement comes down! To me,
talking on the freeband wasn't immoral! Even
If I had a HAM ticket, I could still cause my neighbor
to hate me - ohhh, at least it would be legal!
Anyway, I knew that my Kenwood TS-430S running
well below the ALC was cleaner than some crappy
Radio Shack model (harmonically).

That's all, to the original author - trying walking over
to your neighbors house, I got DXing to do. :)

I never said it was a lot. You just can't admit that I'm right.

> Variations of a SWR reading skew much more than this with different
> coax lengths on a typical mobile antenna installation. Those "skews"
> are not attributable to coax losses.

That may be true. I can't speak for your case but I can think of think
of two possibilities that would exhibit such behavior:
1) SWR meter is not calibrated for 50 ohms
2) Coax is not rated characteristic impedance

Regardless of which case it is, there is no good reason to modify the
coax length in an attempt to improve the SWR. Under ideal conditions,
it does nothing. Under other (less than ideal) conditions, the results
are unpredictable.

Hi Vathsan,
Below are the rules of the CB radio service. It's a bit long, but at least
you'll know the cold, hard facts as provided by the government.

73, Jeff KH6O

Title 47 - Telecommunication
Chapter I - Federal Communications Commission
Part 95 - Personal Radio Services
Subpart D - Rules for CB Service
Revised as of October 1, 1996

Citizens Band (CB) Radio Service

<RULE 1> Description
<RULE 2> Usage of Rules
<RULE 3> Who is Eligible
<RULE 4> Licenses
<RULE 5>Areas Of Legal Operation
<RULE 6>Special Restrictions
<RULE 7>Operating Channels/Frequencies
<RULE 8>Antenna Height
<RULE 9>Equipment
<RULE 10> Power Output
<RULE 11> Linear Amplifiers
<RULE 12> Permitted Communication
<RULE 13> Illegal Communication
<RULE 14> Paying for Actual Use
<RULE 15> Who Is Held Accountable
<RULE 16> Time Limit of Transmissions
<RULE 17> Identification Methods
<RULE 18> Emergency Usage and Assisting Travelers
<RULE 19> Remote Control Operations
<RULE 20> Telephone Patches and Telephony with CB
<RULE 21> Penalties
<RULE 22> Correspondence from FCC
<RULE 23> Notice of Interference
<RULE 24> Service to Transmitters and Antennas

<RULE 25> Modifications to Transmitters
<RULE 26> FCC Inspections
<RULE 27> Keeping Station Records
<RULE 28> Contacting the FCC

Rule 1 - Description

Citizen's Band Radio Service (CB) is a private, two-way, short-distance voice communications service for personal or business activities. The CB Radio Service may also be used for voicepaging.

Rule 2 - Usage of Rules

You must comply with these rules when you operate a station in the CB Service from:
{1} Within or over the territorial limits of places where radio services are regulated by the FCC.
{2} Aboard any vessel or aircraft registered in the United States or
{3} Aboard any unregistered vessel or aircraft owned or operated by a United States citizen or company.

Your CB must comply with Part 95/Subpart E [Technical Rules].

Where the rules use the word "you", "you" means a person operating a CB station. Where the rules use the word "person" the rules are concerned with an individual, a corporation, a partnership, an association, a joint stock company, a trust, a state, territorial or local government unit, or other legal entity. Where the rules use the term "CB station", that means a radio station transmitting in the CB Radio Service.

Rule 3 - Eligibility To Use CB

You are authorized to operate a CB station unless:
{A} You are a foreign government, a representative of a foreign government, or a federal government agency. or
{B} The FCC has issued a cease and desist order to you, and the order is still in effect.

Rule 4 - Licenses

You do not need an individual license to operate a CB station. You are authorized by this rule to operate your CB station in accordance with the rules stated in this Subpart. <*also read Rule 17>

Rule 5 - Areas of Legal Operation

You are authorized to operate your CB station from:
{A} Within or over any area of the world where radio services are regulated by the FCC.
Those areas are:
[1] The 50 United States
[2] The District Of Columbia
[3] Commonwealth of Puerto Rico

[4] Navassa Island
[5] United States Virgin Islands, it's 50 islets and cays
[6] American Samoa
[7] Baker Island
[8] Commonwealth of Northern Mariana Islands
[9] Guam Island
[10] Howland Island
[11] Jarvis Islad
[12] Johnston Island
[13] Kingman Reef
[14] Midway Islad
[15] Palmyra Island, and it's 50+ islets
[16] Wake Island

{B} Any area of the world, except, within the territorial limits of areas where radio services are regulated by -
[1] An agency of the United States other than the FCC, you are subject to it's rules.
[2] Any foreign government, you are subject to it's rules.

{C} An aircraft or ship, with the permission of the captain, within or over any area of the world where radio services are regulated by the FCC or upon or over international waters. You must operate your CB station according to any applicable treaty to which the United States is a party.

Rule 6 - Special Restrictions

{A} If your CB station is located on premises controlled by the Department of Defense you may be required to comply with additional regulations imposed by the commanding officer of the installation.
{B} If your CB station will be constructed on land of environmental or historical importance (such as a location significant in American history, architecture or culture), you may be required to provide information to comply with Part 1.1305 through 1.1319 of the FCC Rules.

Rule 7 - Operating Channels/Frequencies

Your CB station may transmit only on the following channels/frequencies:

channel frequency(Mhz)
channel frequency(Mhz)
1 26.965
21 27.215
2 26.975
22 27.225
3 26.985
23 27.255
4 27.005
24 27.235

5 27.015
25 27.245
6 27.025
26 27.265
7 27.035
27 27.275
8 27.055
28 27.285
9* 27.065
29 27.295
10 27.075
30 27.305
11 27.085
31 27.315
12 27.105
32 27.325
13 27.115
33 27.335
14 27.125
34 27.345
15 27.135
35 27.355
16 27.155
36 27.365
17 27.165
37 27.375
18 27.175
38 27.385
19 27.185
39 27.395
20 27.205
40 27.405

{B} * Channel 9 may be used ONLY for emergency communications OR for traveler assistance.
{C} You must, at all times and on ALL channels, give priority to emergency communication messages concerning the immediate safety of life or the immediate protection of property.
{D} You may use ANY channel for emergency communications or for traveler assistance.
{E} You must share each channel with other users.
{F} The FCC will not assign any channel for the private or exclusive use of any particular CB station or group of stations.
{G} The FCC will not assign any channel for the private or exclusive use of CB stations transmitting single sideband or AM.

Rule 8 - Antenna Height

{A} "Antenna" means the radiating system (for transmitting, receiving or both) and the structure holding it up (tower, pole or mast). It also means everything else attached to the radiating system and

the structure.
{B} If your antenna is mounted on a hand-held portable unit, none of the following limitations apply;
{C} If your antenna is installed at a fixed location (whether receiving, transmitting or both) it must comply with EITHER one of the following:
[1] The highest point must not be more than 20 feet (6.10 meters) higher than the highest point of the building or tree on which it is mounted; or
[2] The highest point must not be more than 60 feet (18.3 meters) above the ground.
{D} If your CB station is located near an airport, and if your antenna structure is more than 20 feet (6.10 meters) high, you may have to obey additional restrictions. The highest point of your antenna must not exceed 39.37 inches (1 meter) above the airport elevation for every 109.36 yards (100 meters, 1 hectometer) of distance from the nearest point of the nearest airport runway.
Differences in ground elevation between your antenna and the airport runway may complicate this formula. If your CB station is near an airport, you may contact the nearest FCC field office for a worksheet to help you figure the maximum allowable height for your antenna. WARNING: Installation and removal of CB station antennas near powerlines is dangerous. For your safety follow the installation directions included with your antenna.

Rule 9 - Equipment

{A} You must use an FCC type accepted CB transmitter at your CB station. You can identify an FCC type accepted transmitter by the 'type acceptance' label placed on it by the manufacturer. You may examine a list of type-accepted equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter which is not FCC type-accepted voids your authority to operate the station.
{B} You must not make, or have made, any internal modifications to a type-accepted CB transmitter. <*read Rule 25> Any internal modification to a type-accepted CB transmitter cancels the type-acceptance, and use of such a transmitter voids your authority to operate the station.

Rule 10 - Power Output

{A} Your CB station transmitter power output must not exceed the following values under any conditions: AM [Amplitude Modulation] - 4 watts carrier power [CP] SSB [Single Side-Band] - 12 watts peak envelope power [PEP]
{B} If you need more information about the power rule, see Part 95/Subpart E.
{C} Use of a transmitter which has carrier [CP] or peak envelope power [PEP] in excess of that authorized voids your authority to operate the station.

Rule 11 - Linear Amplifiers

{A} You may not attach the following items (power amplifiers) to your type-accepted CB transmitter in any way:
[1] External radio frequency [RF] power amplifiers, also called linear amplifiers, or linears; or
[2] Any other devices which, when used with a radio transmitter as a signal source, are capable of amplifying the signal.
{B} There are no exceptions to this rule and use of a power amplifier voids your authority to operate the station.
{C} The FCC will presume you have used a linear or other external [RF] power amplifier if-
[1] It is in your possession or on your premises; and
[2] There is OTHER EVIDENCE that you have operated your CB station with more power than allowed by CB Rule 10.
{D} Paragraph C above in this section does not apply if you hold a license in another radio service (HAM, etc.) which allows you to operate an external RF power amplifier.

Rule 12 - Permitted Communications

{A} You may use your CB station to transmit two-way plain language communications. Two-way plain language communications are communications without codes or coded messages. Operating signals such as "ten codes" (10-4, etc.) are not considered codes or coded messages. You may transmit two-way plain language communications only to other CB stations, to units of your own CB station, or to authorized government stations on CB frequencies about-
[1] Your personal or business activities, or those of members of your immediate family living in your household;
[2] Emergencies;
[3] Traveler assistance;
[4] Civil Defense activities in connection with official tests or drills conducted by, or actual emergencies announced by, the Civil Defense Agency with authority over the area in which your station is located.
{B} You may use your CB station to transmit a TONE SIGNAL only when the signal is used to make contact, or to continue communications (Examples: tone operated squelch, selective calling circuits). If the signal is an audible tone, it must last no longer than 15 seconds at one time. If the signal is a subaudible tone, it may be transmitted continuously only as long as you are talking.
{C} You may use your CB station to transmit one-way communications (messages not intended for two or more CB stations) only for emergency communications, traveler assistance, brief tests (radio checks) or voice paging.

Rule 13 - Illegal Communications

{A} You must NOT use a CB station-
[1] in connection with activity which is against federal, state or

local law;
[2] to transmit obscene, indecent or profane words, language or
meaning;
[3] to interfere intentionally with the communications of another CB
station;
[4] to transmit one-way communications, EXCEPT for emergency
communications, traveler assistance, brief tests (radio
checks) or voice paging;
[5] to advertise or solicit the sale of any goods or services;
[6] to transmit music, whistling, sound effects or any material to
amuse or entertain;
[7] to transmit any sound effect solely to attract attention;
[8] to transmit the word "MAYDAY" or use any other international
distress signal, EXCEPT when your station is located in
a ship, aircraft or other vehicle which is threatened with GRAVE AND
IMMINENT danger and you are requesting
IMMEDIATE assistance.
[9] to communicate with, or ATTEMPT to communicate with, any CB
station more than 155.3 miles (250 kilometers)
away
[10] to advertise a political candidate or political campaign (You may
use your CB radio for the business or organizational
aspects of a campaign, if you follow all other applicable rules);
[11] to communicate with stations in other countries, except stations
in Canada (on General Radio Service).
[12] to transmit a false or deceptive communication.
{B} You must not use a CB station to transmit communications intended for
live or delayed rebroadcast on radio or television.
You may use your CB station to gather news items or to prepare programs.

Rule 14 - Paying for Actual Use

{A} You may not accept direct or indirect payment for transmitting with a CB
station.
{B} You may use a CB station to help you provide a service, and be paid for
that service, as long as you are paid only for the
service and not for the actual use of the CB station.

Rule 15 - Who Is Held Accountable

You are responsible for all communications which are made BY YOU from a CB
station.

Rule 16 - Time Limit of Transmissions

{A} You must limit your CB communications to the minimum practical time.
{B} If you are communicating with another CB station or stations, you, and
the stations communicating with you, must limit each
of your conversations to no more than five (5) continuous minutes.
{C} At the end of your conversation, you, and the stations communicating
with you, must not transmit again for at least one
minute.

Rule 17 - Identification Methods

{A} You need NOT identify your CB communications...
{B} You are ENCOURAGED to identify your CB communications by any of the following means:
[1] Previously assigned FCC CB call sign
[2] K prefix followed by operators initials and residence zip code
[3] Your name; or
[4] Description of your organization including name and any applicable operator unit number
{C} You are encouraged to use a "handle" (nickname) ONLY IN CONJUNCTION WITH the methods of identification listed above in paragraph B of this section.

Rule 18 - Emergency Usage and Assisting Travelers

{A} You must at all times and on all channels, give priority to emergency communications.
{B} When you are directly participating in emergency communications, you do not have to comply with Rule 16 about length of transmissions. You must obey all other rules.
{C} You may use your CB station for communications necessary to assist a traveler to REACH A DESTINATION or to RECEIVE NECESSARY SERVICES. When you are using your CB station to assist a traveler, you do not have to obey Rule 16 about the length of transmissions. You must obey all other rules.

Rule 19 - Remote Control Operations

{A} You MAY NOT operate a CB station transmitter by RADIO remote control.
{B} You MAY operate a CB transmitter by WIRELINE remote control IF you obtain specific approval in writing from the FCC. To obtain FCC approval you must show why you need to operate your station by wireline remote control. Send your request and justification to: FCC, Gettysburg, PA 17325. If you receive FCC approval, you must keep the approval as part of your station records (read Rule 27 on station records).

Rule 20 - Telephone Patches and Telephony with CB

{A} You MAY connect your CB station transmitter to a telephone if you comply with ALL of the following:
[1] You or someone else must be present at your CB station and MUST-
(i) manually make the connection (the connection cannot be made by remote control);
(ii) supervise the operation of the transmitter during the connection;
(iii) listen to each communication during the connection; and
(iv) stop all communications if there are operations in violation of these rules.
[2] Each communication during the telephone connection must comply with all of these rules.
[3] You must obey any restriction that the telephone company places on

the connection of a CB transmitter to a telephone.
{B} The CB transmitter you connect to a telephone must not be shared with any other CB station.
{C} If you connect your CB transmitter to a telephone, you must use a phone patch device which has been registered with the FCC.

Rule 21 - Penalties ++may not be current penalty information.

{A} If the FCC finds that you have WILLFULLY or REPEATEDLY violated the Communications Act or FCC Rules, you may have to pay as much as $2,000++ for each violation, up to a total of $5,000++.
{B} If the FCC finds that you have violated any section of the Communications Act or FCC Rules, you may be ordered to stop whatever action caused the violation.
{C} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any FCC Rule, you may be fined up to $500++ for each day you committed the violation.
{D} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any provision of the Communications Act, you may be fined up to $10,000++ or may be imprisoned for one year++, or both++.

Rule 22 - Correspondence from FCC

{A} If it appears to the FCC that you have violated the Communications Act or these rules, the FCC may send you a discrepancy notice.
{B} Within the time period stated in the notice, you must answer with:
[1] A complete written statement about the apparent discrepancy;
[2] A complete written statement about any action you have taken to correct the apparent violation and to prevent it from happening again; and
[3] The name of the person operating at the time of the apparent violation.
{C} If the FCC sends you a letter asking you questions about your CB radio station or its operation, you must answer each of the questions with a complete written statement within the time period stated in the letter.
{D} You must not shorten your answer by references to other communications or notices.
{E} You must send your answer to the FCC office which sent you the notice.
{F} You must keep a copy of your answer in your station records.

Rule 23 - Notice of Interference

{A} If the FCC tells you that your CB station is causing interference due to technical reasons, you must follow all instructions in the official FCC notice (This notice may require you to have technical adjustments made to your equipment).
{B} You must comply with any restricted hours of CB station operation which

may be included in the official notice.

Rule 24 - Service to Transmitters and Antennas

{A} You may adjust an antenna to your CB transmitter and you may make radio checks (One-way transmissions for a short
time in order to test the transmitter).
{B} Each internal repair and each internal adjustment to your FCC type-accepted CB transmitter must be made BY or under
the DIRECT SUPERVISION of a person licensed by the FCC as a GENERAL RADIOTELEPHONE OPERATOR.
{C} Except as provided in paragraph D below in this section, each internal repair and each internal adjustment of a CB
transmitter in which signals are transmitted must be made using a NONRADIATING antenna (Dummy Load).
{D} Brief test signals (signals not longer than one minute during any five minute period) using a radiating antenna may be
transmitted in order to:
[1] adjust an antenna to a transmitter;
[2] detect or measure radiation of energy other than the intended signal; or
[3] tune a receiver to your CB transmitter.

Rule 25 - Modifications to Transmitters

{A} You must not make or have any one else make any internal modification to your CB transmitter.
{B} Internal modification does NOT include:
[1] Repair, or servicing of a CB station transmitter; or
[2] Changing plug-in modules which were type-accepted as part of your CB transmitter
{C} You must not operate a CB transmitter which has been modified by anyone in any way, including modification to operate
on unauthorized frequencies or with illegal power.

Rule 26 - FCC Inspections

{A} If an authorized FCC representative requests to inspect your CB station, you must make your CB station and records
available for inspection.
{B} A CB station includes all of the radio equipment you use.

Rule 27 - Keeping Station Records

Your station records include the following documents, as applicable:
[1] A copy of each response to an FCC violation notice or an FCC letter.
[2] Each written permission received from the FCC.

Rule 28 - Contacting the FCC

{A} Write to your nearest FCC Field Office to:
[1] Report an interference complaint; or

[2] want to know if the FCC has type-accepted a particular transmitter for CB service.
{B} Write to the FCC if you have questions about the CB Rules: FCC Private Radio Bureau Personal Radio Branch
Washington, DC 20554

729. Another Grant XL question

Newsgroup: rec.radio.cb

While the Grant XL mods are fresh on everyone's mind, I notice that with TR24 gone, turning VR11 doesn't affect SSB power output. It seems it's always at a maximum of about 20 watts. Is this what is sposed to happen when TR24 is removed?

Thanks
-RC

The guy's just jealous that he will never have the money nor the knowledge to
put together a system that equals what is heard on The Bowl.

Illegal? Of course. But as a person who has always been fascinated with the
technical side of radio communications, I cannot help but to be a little
impressed at someone who is able to generate 10,000 watts (or more) of RF power
from a moving vehicle.

Hi , anybody have a book on the digascan hookup to a cobra 148 GTL ? Just has the power cord and two other 2 strand cords so it shouldn't be too hard .Just email me @ clfastback@aol.com . Thanks in advance , Chris

Yes but just turn down the mic gain if you have any complaints.
If you don't like that, then you could try to replace tr-24 and then
remove r 131

For five years, I ran an Antron 99 with the optional ground-plane kit. It was good for approx. 10 miles on A.M. (stock radio) and 30 miles SSB. I have since "up graded" to the IMAX-2000 which has given me approx. 17 miles on A.M., and 60 miles on SSB. I have talked to Kingston Ontario Canada, from Watertown, New York on MANY occaisions. Get out your map. Oh... and incidently, my IMAX is EXACTLY 26 feet LOWER than my Antron 99 was. My IMAX is on a 10 foot mast on the roof. My Antron was on a 36 ft. mast on the roof.

You're confusing some items here. The mismatch does create standing
waves. What I am saying is that losses along the cable reduce the
magnitude of the standing waves. The SWR actually decreases as the
reflected power becomes attenuated.

> > The only reason you get different readings is due to coaxial losses.

OK. Despite the fact that you haven't really given me anything to
support your side, I'll give you something to support mine.
Look in your ARRL Handbook at the end of the chapter (probably 16) on
transmission lines. There is a plot of "SWR at transmitter" versus
"SWR at antenna". Read this and tell me again how line losses do
not affect SWR.

> > The Standing Wave Ratio is, in essense, a measure of the ratio of

Sorry, you've got it wrong. The readings will not be identical
(however, they may be close). You are calling the ARRL Handbook
a liar. You better contact them and let them know their erroneous ways.

> The only way these power

Absolutely false. If the power level changes, where does the power go
(or come from)? You are forgetting about conservation of energy.
Forward power and reflected power are constant along a coax. The
voltage maxima and minima are created by the sum of these two waves;
they have no effect upon it. Furthermore, voltage maxima and minima
have no effect on the SWR reading.

> Try using an RF Ammeter to measure these things.... Or add a 4 foot section

> will see an impedance of 50 ohms.

What are you talking about? 40 + j10 ohms does not equal 50 +j0 ohms.

Answer this:
Which antenna radiates more power?
Antenna 1 with an impedance of 49 + j11 ohms, or
Antenna 2 with an impedance of 40 + j0 ohms

What is the SWR for each?

I won't keep you in suspense. They both have an SWR of 1.25:1 and
the both radiate the same amount of power. My point is that antenna 1
with the reactive impedance is no better than the resonant antenna 2.

> Their is a mismatch, though. However,

On the contrary, your statements contradict reality and the ARRL Handbook.
All you can give me is a bogus "look at the book." I've told you exactly
where to look in the book.

> > > > A mismatch is a mismatch regardless of whether it is reactive,

> watts.

It's not a question of what resonance is. It is a question of how, as
you claim, it is inherently better. I've given an example above of how
it is no better than a reactive antenna. Your impossible mission, should
you choose to accept it, is to show how my example is wrong.

> simple LC circuit, right?

There is no single correct way; there are multiple ways. A coaxial
matching transformer can be used to match any impedance -- even a
complex impedance. I can match that impedance with one component; you
require two with your "L" network. Who is the simpleton?
Try me. Give me an impedance to match.

> > I can match a 40 ohm impedance with a quarter wavelength of 44.76 ohm

> > there are no currents on the outside of the coax.
>
> So you are saying that a Balun is unneccesary?

Unnecessary for what? Tell me how a 40 ohm terminating resistor makes
current flow on the outside of the coax. That is what you said.

> Or are you saying that if you have an antenna that is 10 ohms, you don't
> need a matching network?

I never said you don't need a matching network. I said current will
not flow on the outside of the coax by virtue of the antenna impedance.
Understand the difference?

> Or are you saying that an antenna that is RESISTIVE 50 ohms, and not
> reactive in the least will not have outside currents...

No, that is what you are saying. I say the antenna impedance does
not determine whether or not currents flow on the outside of the coax;
other factors do. If I feed a horizontal resistive 50 ohm antenna with
an unbalanced transmission line, it will experience currents on the
outside of the coax due to the current imbalance; it has nothing to do
with the impedance.

> I agree with the last statement,

Yes and you are wrong.

>
> (notice the different words there....)

No. Mismatches include reactive loads (or did you think a reactive
load was a good match?).

> Current on the
> > outside of the coax is caused by other factors like a poor counterpoise
> > or imbalanced antenna currents.
>
> Which a reactive load can present.

No.

So you think a coaxial matching transformer *does* radiate power?

> Try to run a piece of coax that you are using for a G5RV down the side of a
> grounded tower.
>
> You have a tower, right? If so, give that a simple try... It would even
> work with a dipole, as a center fed, horizontal dipole doesn't terminate in
> 50 ohms... You use a quarter wave transformer to get the feedpoint their.

Ahh, but you are talking about something different now -- exactly what
I have been saying. You are feeding a balanced antenna with an unbalanced
feedline -- this causes a current imbalance and creates currents on the
outside of the coax. These currents are not caused in any way by the
antenna impedance; they are caused by the current imbalance (the "other
factors").

> > Better watch what you say, the CLP will arrest you!
>
> I care?

You obviously don't care what you say.

You're talking about two different items here:
1) the desired length of a 50 ohm coax in a mobile installation,
(short is best, no specific length is required)
2) creating a coaxial matching transformer
(a specific length and non-50 ohm impedance required)

You know the difference but your refusal to acknowledge some realities
has degenerated your dialog into a search for discrepancies in an
"apples and oranges" comparison.

Sounds like the Bay Area has its share of rebels. And if
you are drawn to that type, that's what you'll see as "the
majority".

742. Midland 79-290..again

Newsgroup: rec.radio.cb
Date: 1999-10-07 00:00:00 UTC
From: skorzy@SPAM_KILLER.mindspring.com
Message-ID: <skorzy-0710990203010001@user-2ive8bl.dialup.mindspring.com>
Source record: 5141

There was a discussion recently about the Midland 79-290 CB. I've currently got a Uniden 76XLW and have been wanting to get a radio with SSB *and* Weather reception. The Midland one caught my eye. Its a nice looking radio.

Now, the chatter here says this radio is extremely sensitive to engine noise. How bad is bad? Comparable to the Uniden radio? Is there something I can do to reduce this excessive engine noise reception (besides solving the source of the engine noise, I've been all through that already and the fixes would be exorbitantly expensive)

There was also some sort of modification available that narrows the splatter? Is splatter a problem with the Midland?

Otherwise, I'm in the market for a SSB CB that also receives NOAA weather broadcasts. The Midland's size is attractive too, since I could easily mount it in the dashboard of my small car, instead of hanging like a bomb in the passenger footwell like my Uniden rig.

I see Texas Ranger makes a SSB/NOAA CB. Are those decent radios?

Thanks for any input!

Hi , anybody have a book on the digascan hookup to a cobra 148 GTL ? Just has
the power cord and two other 2 strand cords so it shouldn't be too hard .Just
email me @ clfastback@aol.com . Thanks in advance , Chris

like i just told rfenforcer, i'll have to see that one in the rule book. if it's not there, it's still against the rules and my statement still stands because every rf policeman in this news group is beating us over the head with the technicalities so here's one for you. as far as your engineers statement, i don't doubt what you say because it would be a matter of selective enforcement. it would be too much for them to do their jobs.
if it were alright, why don't the people at these monitoring stations say something to the offenders??? if they were to make their presence known, more people would be wary of being there in the first place.

Run a ground strap from the trunk lid to the car body, do this with the hinge bolts.
Also make sure the set screws under the lip mount are making good connection. Keep in mind that if you add a ground strap it needs to be as short as possible. try running it from the antenna mount to the vehicle body (not the trunk lid) and see if this helps, just keep the strap as short as possible.

Technically Jack you can just simply tie the inputs and outputs of these amps together and retune your input and output shunt, now I personally would not do this or suggest doing this but you would still get output from both amps assuming there is no canalization between the two, But with two ferrite beads, two 100 ohm resistors and a couple of feet of teflon wire and you would basically have a Texas star 400, now this would require some retuning to achieve a good match between the two sections, it is fairly simple just not suggested for the inexperienced, and I would be willing to bet you could learn a lot from Phil.

>
>
what are you talking about?
aside from the freq difference, the rf technology and propagation are almost
identical between 10 and 11 meters as evidenced by the interchangeablity of cb
and ham radios to both services

.>it creates a
>garbled communication of "doublespeak"
it's too bad that cber's got there too late. hams have held the patent on this
one since the 1950's.

> I don't think I am superior to ANY one, yourself included.

boy, talk about double speak!!!!!!!!!!!!
all of the hams of the rf police persuation act as though God only speaks on
ham freqs so don't run that shit on me boy.

> But I also am
>not about to kowtow to someone who is either blatantly trying to hogwash
>otherwise unknowing persons about basic RF practices, or is himself unaware

when you're not dancing the side-step with Gary and JJ, you should make pretzels.
between that other "muhfuker" post that you smeared here and the way that you pull my words and sentences out of context and twist them, all that you need is an oven.
don't run your shit on me, BOY!!!
it took me long enough to stop rhooligan2 from lying like that and i had to do it to him and make him look bad in the process just to prove the point.
it's rough sometimes to have to use a water cannon to put out a candle like yours but if it's nessessary, the water bill would be worth it. if you're going to be a liar, at least be a man about it with your own words and not mine. now that you've shot yourself in both feet and blown your dick off, it looks as if you are taking aim at your mouth. if so, don't miss, it would be difficult to contain the vacuum from your head should it be realeased.

A number of things I can't figure out...
Why is it so hard for "Ms.Angle" to simply state whether she sent an e-mail or not? Why does it matter to her whether the mail could have been faked? She should be able to remember whether she had to deal with a "ScanShack" website and the use of the term 'shack', shouldn't she? Would SHE somehow be liable if she admitted writing it, or not writing it?
She could save herself and Tandy a lot of headaches if she would admit or deny it with a simple answer to a phone call... wouldn't take her more than three seconds and the "truth" would finally be out, rather than all the speculation and hard hits at Tandy's expense (not that they don't deserve some ridicule for MANY blunders!)...
Why didn't they send ScanShack a real, registered letter by real post if this was so important?
Of course, there's the obvious question of the absurdity of the claim, and the "rights" involved with the term 'shack'. OR 'radio'. Or any of a number of ridiculous and questionable statements put forth by "Ms. Angle" or whomever wrote this mailer to ScanShack.
If it IS from Tandy, screw them, keep the site up, they haven't a case.
If it ISN'T from Tandy, keep the site up anyway, as there is no real threat.
Please check with all your local/state licensing depts', and have an attorney friend call Tandy and Ms Angle... two minutes with any attorney worth his or her salt and Tandy will have to cower away with its tail between its legs... this is one of the most absurd claims I've ever seen! :-)
Mike

>just
>saw them as an opportunity to use them for CB? Just because of the way an amp
>is made it can cover frequencies to include CB doesn't mean they are
>intending
>to sell them as such. It's not like you can make a 10 meter only amp...

EXACTLY MY POINT!!! THANK YOU.
the rf police are always hawking the evils of the insidious CB AMP. even when i try to defend their right to use them, i'm wrong.
when the big flap came up a few weeks ago about the fcc allowing local police to enforce regs, i stated that it was stupid because a lic. ham could legally use a modified cobra 148 and a texas star 350 on 10 meters and an un-trained cop at a glance wouldn't know the difference and they still tried to find fault with my logic.
go figure???
jeff

you must be fasented by watching a mouse wheel. first you condemn me as a
biggot then you quote my defense:
>> my personal definition of the word "nigger"
>> has NOTHING TO DO WITH RACE OR COLOR.
>
take a valium, relax and get your shit together before you try to tangle with
me, BOY.
>Keep your "personal definition" to yourself. The
>rest of us know what that word means,

by this quote of yours, it seems to me that you prefer the traditional,
biggoted definition.

>Keep your "personal definition" to yourself.
what's the matter, don't you like my color / race neutral definition or did you
find something of yourself in it???

This is most interesting, but have you actally turned
on a cb lately and seen just how many people follow
these rules? How bout 0? That's the way it is
around here anyways.

ok asshole, where in the rules is it written that a LEAGALLY LICENCED HAM can't use a "homebrew" modified cobra 148 and a texas star 350 for example on 10 meters so long as it meets spectral pureity standards??? if that fcc / local police law were to pass and a cop were to see such a setup in your car and confiscated it, there would be a trail of shit and tears from your car to your lawyers office!!!

Actually, that's not entirely true. It's illegal for a RETAIL outlet to
sell AS NEW an older formally type accepted (But not by today's rules)
radio. But there is nothing illegal for private parties to sell old
radios.

Does the reflector help your skip shooting?

Is it connected to the ground, or just laid under there?

Thanks,
Scott

I got one for all you Guru's of CB land...
I have a Midland 77-838 and would like to know if and how I can mod it?

Extra channels, more output, anything to give it a little more kick and
maybe a little more...

Anyone out there that can assist?

Scott

you pompus, narrow minded, lie-to-yourself, self centered idiot!!!
you MUST be the only ham that you know to believe what you just said.
if i were you and said that, i, in all honesty, would have to have a BULLSHIT
disclaimer tatooed on my forehead and use it for my e-mail id'er.
there is absolutly no defense for your statement!!!.
in the famous words of steppenwolf in their song, tighten up your wig:
your mind is so narrow that it's no suprise
if you fell on a pin, you'd be blind in both eyes.
if you're going to "tighten up your wig", you should really use a torque
wrench. i don't think that it's up to specs right now.
i'll bet if you went to a ham fest that you are unknown at, (all of them, i'm
sure), and passed out an annonomous questionare to all hams in attendance and
slipped in a question about wether or not they had some form of illegal
equipment in their shack, you would be stunned at the answer. try it sometime
you and your opinion will be sorry you did.

maybe so but the fact remains that hams can and do legally use so-called "cb"
amps on 10 meters and ham freqs below.
if the fcc were to make a regulation with associated penalties that such amps
could not be sold to anyone without presentation of a valid ham lic or
exporters lic. it would, at least slow down distribution of these amps on the
market.

I can't believe you are surprised by noise if you run the coax through the
firewall, where like 90% of the cars wires are located. Plus I don't
think it would change much with a different manufacturer.

>from a moving vehicle.

Who needs to do that when I can talk to Europe on 12 watts SSB from the mobile with a Wilson 500? All that extra power just wipes out all the adjactent frequencies so no one else can enjoy themselves.

About the only problem I've had with Radio Shack radios is the price. If you live in an area where Radio Shack is the only "CB" store around, you're pretty much stuck unless you use mail order, but if you have a CB store in your area, you're better off going there and buying the same radio with a different name, cheaper.

What you've just wrote has nothing to do with CB amps. It's not a
stereotype--it's a fact. CB amps are CB amps. They can be used by
hams, but they were never aimed at hams.

You're letting this upset you... Relax.

802. RCI 2950 repair question

Newsgroup: rec.radio.cb
Date: 1999-10-07 00:00:00 UTC
From: Quandt@webtv.net
Message-ID: <22935-37FD61B7-106@storefull-111.bryant.webtv.net>
Source record: 5301

I've been trying to figure out what is wrong with an RCI 2950 I looked at yesterday. Everything seems to be fine when it's powered up except the fact that it rapid-fire scans through all channels. It won't accept any commands from the buttons on the front of the radio (i.e MAN, DIM, SHF ect.), but all of the four rotating knob controls work fine.

Did something fry in one of the chips that controls the keypad interface? Does this sound like an easy fix? Expensive? Common problem?

Like I said everything else seems fine. Although, because of the unstoppable scanning, I haven't been able to hear any real conversations...only quick milli-second burts of audio as the radio just keeps right on scanning at high speed. No controls stop the scanning.

Thanks for you help,

Mark

The fuses are most likely under the dash on the left hand side or on the left kick panel. If you have a VOM you could find a fuse block that is hot all the time and hook it up there. That would be much better for this radio.
See ya
Slider

Professor and James,

Set that radio (am) up to key 0 and
produce any amount of forward power...

Now tune a ssb rig to the same channel
and modulate the am transmitter, the signal
will be unintelligible on am but if you
switch to the upper or lower sidebands you
will hear a pair of mirror image signals
on both and perfectly intelligible as well!

Sounded like fun,

Jack

From: bm672@lafn.org
Message-ID: <37fd174e.15418667@news.lafn.org>
Source record: 5359

Hello, I have been posting the following on all related sites I can find. Thanks to those who have sent info etc.

Thomas

Hello. I am a writer living in Los Angeles who is interested in developing a character who has as his love, scanning the channels and listening to the different dramas that take place in what is a world only known to those who listen. I have no experience whatsoever in scanning, have no idea about the language etc. My father, ironically, was a radio communications man during WWII and one of his hobbies was as a ham operator - no fifteen foot plus antenna, but a great old tube machine that I always enjoyed playing with. I am also someone who has made a living working as a sound editor on films of all types, from small independent to big Hollywood, before I became a writer. Listening has been something I've done all my life and have wanted to have a character in one of my stories be able to show something of what it is to listen. All that said, if anyone has anything they can tell me or wish to start a dialogue, I am curious to learn and be directed in learning about what goes on out there. Thanks for your time and I look forward to talking with and getting advice from some of you.

Regards,

Thomas

>Date: Thu, 07 October 1999 03:27 PM EDT

>you are right on that count but at least i do it up front instead of the underhanded way that the rf police try to do it.<

Yep. Nothing like a BLATANTLY obnoxious person as opposed to one who tries to be civilized about it.

>where?<

If you weren't spending so much time being obnoxious and spent a little more time READING some of the posts looking for more than troll-bait, you might have read it. Too late now.

>what are you talking about? aside from the freq difference, the rf technology and propagation are almost identical between 10 and 11 meters as evidenced by the interchangeablity of cb and ham radios to both services<

If it has to be spelled out for you, you are one of those people for whom the phrase "If you are not a part of the solution, you are a part of the problem" was authored.

>it's too bad that cber's got there too late. hams have held the patent on this one since the 1950's.<

Since you bring it up, perhaps you'd be willing to provide us with a "for instance"...?

>boy, talk about double speak!!!!!!!!!!! all of the hams of the rf police persuation act as though God only speaks on ham freqs so don't run that shit on me boy.<

And how does my asserting that I am no better/no worse than any other man/woman equate to my being a mouthpiece for God?

(SNIP)...>so don't run that shit on me boy.<

So you are saying I *AM* better than you, Jeff? Thanks for the complement, but I hardly think so...

> i have to admit that you have said so eloquently in this last line, what i've been trying to say here for 5 months to all of those clay-footed Gods out there.
seriously, i like it so much that i will repeat it here and print it up to hang on my desk:<

Again, thanks for the compliment, but perhaps if you weren't so insistant on cramming your opinions on what's acceptable/not-acceptable as far as responses top posts, others would just fade away?

You make some valid points, but the "yelling" (internet style) and frequent blatant profanities only stereotypes you as one of "those" CBers, as opposed to the rest who try to make it a useful tool or enjoyable hobby.

830. Re: Antenna Ground

Newsgroup: rec.radio.cb
Date: 1999-10-07 00:00:00 UTC
From: Viffer <viffer@itis.com>
Message-ID: <7tj8nk$pr5$1@news.chorus.net>
Source record: 5368

Try putting a jumper wire across the trunk hinge. There are probably nylon bushings in there that don't allow a good connection leaving only the springs, (can you say an inductive coil?) I had this same problem with my Dodge Neon to a lesser degree. I put a #10AWG jumper with spade connectors and self-tapping screws into the hood frame and the frame of the car that holds up the rear deck. This really helped. Use stranded wire so it can flex with the motion of the hood. I also drilled just a bit of the paint away where the set screws of my K40 trunk lip mount sat and put some dielectric grease there. That really helped.

O.K., asshole...

See below..
> > Yes, their are ways to open the chassis up...
>
> I asked for help. If you don't want to help me, at least don't patronize
me.
> Why did you bother with a reply?

I am not patronizing you. I simply said that their are ways of opening the
chassis up. If that offends you, I apologize.

>
> > Don't install the diode... Makes it sound like shit.
>
> I appreciate your opinion, but I think I'll try it just the same IF
somebody
> generous enough can help me find R264 or the *correct* point to install
it.
> If it sounds worse than the backswing I already get, I can always reverse
> it, right?

So let's see.... You asked for help, I gave you a bit of help, in
recommending that you NOT install the diode, and the first thing you do is
disagree.

Fuck you.

Next time, if your not going to listen to the help that people give, DON'T
POST A REQUEST FOR HELP!!!

>
> > I have worked on a couple of those chassis for people on the newsgroup,
> and
> > they can be made to operate nicely (deadkey 1.5 watts and swing 20+),
but
> > the mods are not for the faint of heart.
>
> "Faint of heart"? Like I said, why bother with a reply if all you're going
> to do is patronize me and refuse me the help I asked for?

I will be enclosing the modification below.

You could have at
> least posted what you charge to do your mods and spared me this "not for
the
> faint of heart" crap.

I don't do this for a living. How much would I charge? I wouldn't do it for you, so cost is not an issue. You are one of the people (It is easy to spot them on a newsgroup) that insists that they can always get "1 more watt" from that radio, or "Just a little more swing" from that chassis...

See them all the time.... They don't interest me.

I'd appreciate some information

I am enclosing it below.

. If anybody is
> generous enough to help me, my email address is doctorbeltway at hotmail
> dotcom. All I'm looking for is a low key and decent forward swing.

I was going to post the information on what I do to that chassis, as a matter of fact, I typed the entire thing out.

I changed my mind. Your an asshole who is undeserving. Learn yourself. Why should I type it all out so you can disgregard it like the last thing that I told you.

Incidentally, you can get that chassis to swing from 0 to 21 watts with a basic circuit build.... However, it sounds like shit with less than a watt and a half of carrier.

Enjoy your radio.

Wait... No.... Channel 6 uses no profanity.

Guess that counts out TV, 2 meters and radio.

>
> >Illegal? Of course. But as a person who has always been fascinated with

mobile
> with a Wilson 500?

Who needs to... The people who enjoy playing with the higher power, and the
inherent limitations of a mobile generating that much power.

It is hard to do, and fun to persue.

I can tell you where the kid that was afraid to dissect the frog, too....
Don't try anything new or different. Just sit in the corner and do
everything Clinton tells you.

Good little Comrade.

All that extra power just wipes out all the adjactent
> frequencies so no one else can enjoy themselves.

No, dirty signals do that.

I know of people who run 30 thousand watts (or more) on 75 meters and don't
tear anything up.

Your another idiot that spews off at the mouth about something he knows
little about, hangs out on Channel 29 (with an elitish little clique of
people just like you) who have very little technical expertise but
continuously brag about how good your stations are.

I listened to the same type of idiots for 10 minutes last night on 80 meters... It was disgusting.

Source record: 5380

woah, back up jack.
you haven't been keeping up with the drama that has been unfolding here over the last 5 or 6 months.
here's a nutshell that i would challange anyone else to claim false:
1) people come here to rec.radio.cb to read, learn, inform, and ask questions.

2) generally, when someone asks a question, they are requesting an answer directly pertaining to said question. ie;
question: how do i put channels in my XYZ radio?
answer: cut here, jump there, change xtal ABC.
seems simple, doesn't it? not here.
if someone asks a question about channels or amplifiers, a portion of the ham community, the ones that i call the rf police or the sheriff and deputy, jump in with spam-like answers as to wether their actions are legal or not. i say spam-like because it has nothing to do with the specific question asked.
if someone were to inquire as to the legalities of such actions, these answers would be perfectly fine.
this portion of the ham community has the attitude that NO ONE who has a ham licence would EVER posess / use a piece of illegally modified equipment.
case in point, rhooligan2 responded to this same post as a "big piece of dog poop".
i rest my case.
they point and bitch at the dust pile in our yard while all the time ignoring the shit pile behind them.
all i'm saying to them is clean your yard first before you bitch about mine because we both have our shit pile but they have their noses up our asses so far that they can't smell their own. they have self-appointed each other the rf police and the guardians of the air waves in bands that, for the most part, don't even concern them. specifically the out-bands above and below cb.
if i choose to go there, that decision is between me and the fcc with no input nessessary from them but they keep side-stepping one simple question.
WHERE DID THEY GET THEIR AUTHORITY TO DICTATE TO ME / US WHAT TO DO WITH OUR LIVES / PROPERTY, (RADIOS).
if i were to follow you everywhere you drive and stop everywhere you stop and everytime you turned around, i told you every little traffic infraction you commited.
you would be asking me the same question. WHO IN HELL ARE YOU AND MIND YOUR OWN BUSINESS.
this is my question to them but thew don't have 2 balls between 5 or 6 of them to muster an answer so the fight goes on.
have a good day.
jeff

Tim, I went over to a diff site where it was supposed to be and it was pulled there also!!! The site was pulled over there cause it violated the rules where it was posted.
I also emailed the domain postmaster and it bounced right on back as not being real!!!

Anyone can modify a Galaxy radio and not void the warrantee!

As long as the modification doesn't harm the radio, Galaxy honors any and all warrantees.

And, Galaxy doesn't have any "certification" process.

I think you where fed a line of shit.... Even if your radio does work good.

He's right. You're better off common grounding the negative and
running the positive to a source of constant voltage at the fuse
panel. Often, there are convenient spade connectors at the fuse
panel just waiting for you to connect things to them.

I say go with the consensus opinion. Most of the posts to this
thread agree that hams do what they want regardless of legalities
just like CBers do. Remember, CBers and hams are PEOPLE. People
will do what people will do. The difference is that hams have
alot more leeway before their operation is illegal. THAT is the
reason why there are more legal ham stations than CB stations.

Probably both. The neat thing is that you only need
about a 6 amp source to power the radio under the most
extreme of conditions. Any constant source with a
nearby spade connector is the one you want. If you
have trouble finding that, go to a high-end car stereo
place and pay them to do it for you. The main thing is
to make sure that the radio is always connected to a source
of power so that it will hold its memory.

869. Re: Amperage Draw???!?

Newsgroup: rec.radio.cb
Date: 1999-10-08 00:00:00 UTC
From: Bill Eitner <kd6tas@netzero.net>
Message-ID: <37FDAB94.659239D4@netzero.net>
Source record: 5257

A TX400 (the 400 probably means peak power) means that the average
power is 100. You always assume 20 amps for every 100 average watts.
So, if you're driving that amp properly, any car's electrical
system should be able to handle the draw. On SSB, double the draw.
Even then a regular car's electrical system should handle it.

Absolutely. That's the whole point. The AM and SSB audio depend
on the mic and the mic gain (dynamike) settings when TR24 is gone.
That gets you the highest possible performance from a Grant/148.
The same goes for TR/Q32 in the RCI/Galaxy radios.

Get the 79-290. If reception is that bad (which I doubt it will
be unless you're a total newbie) you'll be very satisfied.
Remember, you can always pull to the side of the road and shut the
engine off. I doubt you'll ever have to do that, but that instantly
negates any negative crap you've heard about the 79-290 receiver
picking up high levels of engine noise. The 79-290 is a great
value.

Don't see any solder bridge. I did notice the two power lead coils have had all the "black coating" burnt off of them. The diode across the coils was blown at one time and then replaced (looks like the red and black power cord had been crossed).

Also, the radio doesn't scan out-of-control when it's powered up on a bench power supply. It only locks up in scan mode when used on a vehicle cigarette plug. Currently there's only a 4 amp fuse in the cord. Would that make any difference if the radio is supossed the take a 7.5?

Hi 10 Ohm,

You guys are putting me up on a pedestal.

I only know a quarter of the Toll's, Dennis', and Bill's on this ng and I've only learned that through working with a close associate on our amp projects, building only a handful of amp's from published designs or kits and of course through much reading.

I consider myself thorough when it comes to research but I will never, ever be a component level design engineer.

I work for myself, but have as friends some switched on Bsc MIEE members who have written several published papers.

After much pushing by myself, a friend Peter has just completed the first prototype of a class-E FET amp which on a relatively low voltage (30v) has already generated 100w of RF with over 90% efficiency. This design is based on work by Raab at the California State University. 250w AM and 700w of CW for under 10 dollars! When the critical tuning has been sorted the class-S AM modulator will be next.

No, you will not find much info on the www, Bill did say he wanted 'leading edge':-)

This work has the potential to stamp on all bi-polar amp's, at far less cost and without all that heavy gauge wire wrapped around the Suburban.
>Technically Jack you can just simply tie the inputs and outputs of these
>amps together and retune your input and output shunt, now I personally would

>to achieve a good match between the two sections, it is fairly simple just
>not suggested for the inexperienced, and I would be willing to bet you could
>learn a lot from Phil.
I don't dispute that this can work but it would not be my choice! I agree with what you say.

I think there are three camps in the amp world.

Those that are designing and building for the mass market where price and to a large degree big numbers are often quoted far above reality. If IMD figures were quoted well, I leave the rest up to you.

Those that build competition class-C amp's for this end of the market where above standard voltages are often used.

Finally, the competition amp builders that construct their very own comp amp's. Now it's OK if these people have someone fronting their products at shoot outs who have the rest of their system together, power supply, antenna etc. If they are representing themselves in the hope of making money from the sale of their wares after the shoot-out then they are surely going to pull out all the stop's in building the most bad ass amp possible and that includes going the extra mile in spending the time and dollars.
There is no point what so ever in running second place. That does not sell amp's as I witnessed at the Showdown in Motown with 123 and his X-Force units.

Just my 2c, I mean 2p.

Rat Shack has fuse taps that insert into a blade type fuse socket right alongside an existing fuse, many import cars don't have acc'y. terminals. Find a fuse that is normally hot, generally less noise than from running an unshielded line through an engine compartment full of electronic modules. Have a friend who uses mini-8 coax to the battery and swears that the shielding helps a lot, never tried it myself....for 10 feet or so it might be worth a try, solder and shrink-tube or tape all of the connections, use a proper size ring connector to the battery terminal bolt.

Agreed. Rat Shack may not represent the best "value" for your dollar.
But as far as performance, they were no worse (or better) than top of
the line brands, like Cobra.

An interesting point. If the power maxed out at no more than 4 watts, then, I suppose, it could be legal. I would then wonder why we've never had such a feature before. A long time ago (1965) when my Lafayette Comstat 25 was made, there was a switch on the back that dropped power from 5 watts, to 100 mW. The idea there was that you could run your radio in the 100 mW position before your license came. The FCC didn't like that much and it disappeared soon after. But other than those radios, and handhelds, I've never seen "legal" CB's with out-of-the-box factory power adjustments before. I just assumed that the FCC didn't allow them for whatever reason.

Point of clarification. Not everyone who respects the rules, and
believes in legal operation are all "hams". That's where you make your
mistake by painting everyone with a broad-based brush. You are guilty of
2 generalizations with your statement:

1. All hams are "RF Police"

2. All Cbers are reckless lawbreakers.

> this portion of the ham community has the attitude that NO ONE who has a ham
> licence would EVER posess / use a piece of illegally modified equipment.
> case in point, rhooligan2 responded to this same post as a "big piece of dog
> poop".

There are hams that break rules, as there are CBers that break rules.
The fact that some unnamed ham or CBer is running illegally, does not
deprive another ham or CBer, who IS legal, from pointing out the error
of running illegally to anyone asking for illegal mods. Many times
newbies are not aware that what they ask is illegal. They may not want
to be illegal.

> i rest my case.
> they point and bitch at the dust pile in our yard while all the time ignoring

> nessessary from them but they keep side-stepping one simple question.
> WHERE DID THEY GET THEIR AUTHORITY TO DICTATE TO ME / US WHAT TO DO WITH OUR
> LIVES / PROPERTY, (RADIOS).

Again you make the (mistaken) assumption that the only ones identifying
illegal activity are hams. You are bordering on paranoia with statements
that sound as if hams are all out to destroy CB. Most hams couldn't care
less what Cbers do on their own band. The only time hams get on Cbers is
when:
1. They illegally transmit on a ham band.
2. When they run such dirty equipment, that they interfere with the ham
who's trying to work legal ham bands.

Other than that, they simply DON'T CARE.

> if i were to follow you everywhere you drive and stop everywhere you stop and
> everytime you turned around, i told you every little traffic infraction you
> commited.
> you would be asking me the same question. WHO IN HELL ARE YOU AND MIND YOUR OWN
> BUSINESS.

Many people have been in CB radio for years. It is a hobby that has
brought them many hours of enjoyment, and made them many new friends.
Many of these old time CBers are becoming increasingly disturbed by the
"new wave" CBer that has absolutely no respect for ANY rules, or even
the simple actions of common courtesy. The "me first, up yours" attitude
that has taken over society at large as well as the radio. The old
timers are seeing their hobby being destroyed from the inside out, and
in many cases are trying to fight back. If I care about my hobby, it IS
my business, when someone else treats it with disrespect. Since we all
are "the public", we all have a equal share of it, and it everyone's
business. It's not like a private affair that you conduct behind closed
doors. The radio is PUBLIC, so anytime you affect other people, it
becomes their business as well.

>Anyone can modify a Galaxy radio and not void the warrantee!
>
>

Nope. If you have gone into the radio and totally f*cked it up my doing some mod that caused some other parts in the radio to go bad, Galaxy will not honor the two year warantee! That is straight out of the mouth of Monika, who I spoke with two weeks ago from Galaxy.
No one in their right mind would expect Galaxy to repair a radio for free that was damaged by someone who tried to modify it.
The mods John Mahoney at Panther Electronics perform will not harm the radio or void the two year warranty.

>And, Galaxy doesn't have any "certification" process.
>
>I think you where fed a line of shit.... Even if your radio does work good.

Panther Electronics is a "authorized" Galaxy repair center. They do repairs for Galaxy all the time.
If your Galaxy radio is still under warranty and you sent it to another cb shop, they would charge you for the repair and if they tried to fix it and damaged something, galaxy would not honor the warranty.
Being that Panther is a authorized Galaxy repair center, they would not charge you for the repair; Galaxy would pay Panther for the repair.
Do some homework, call Galaxy and find out for youself, go figure, and then run your mouth.

Interesting assumption. Two people I know have Chrysler Mini vans and run a Larson Antenna mounted in between the hood and fender and run the coax through a hole in the firewall and have very little engine noise on their Uniden 66 & 76. So Roogie I don't know what to say to your reply. Can you explain to me how you arrived at assumption?

I have a great reputation. Guys on the radio say "Hay your Jay in the
Great Mojave Desert, love your postings on the CB news group, and keep
it up"
I reply "Thanks a million"

> Just, please, don't tell new guys it is just OK to buy and use an amp in their
> truck.....it isn't OK.
>

I don't think there going to listen to you, there gonna do what they
want.
You telling them "it isn't OK" is like waving a red lantern at a run
away train. Not real effective, but it may make you feel better. Do you
honestly belive anyones gonna believe you with all your unfriendly,
snotty, and biased posts you have posted here? I don't think so.

Jay at jay123a@qnet.com .... in the Great Mojave Desert, just down the
road ah ways from the fillin station.

Instead of turning OFF my boombox, I just turn the
volume DOWN*. I find it is a lot easier for me.

Question: Will the inner electronics leach away
an appreciatable amount of electricity
as I let the boombox sit for hours unused?
It is powered by six D sized batteries.

* Only when I'm listening to the radio (not the
CD ROM or tape).

Big thanks, Gents.

well Dave,to paraphrase one of our
cultural icons, "Your old world is rapidly fading, so you bettert start
swimming or you'll sink like a stone...for the
times-they-are-a-changin'".
You said it yourself, with the reference to new wave cbers. I didn't
implement the changes, they are happening on their own. If it bugs you
and you feel it is your business and you can't roll with it, get out. Or
more simply, turn it off.

Gettin' WAY-UP from the 'pile

send payment and choice of name and type. I will mail you your handle to you
same day air<

This has GOT to be the work of Fred Maia, W5YI. He's the same Ham who
sends out solicitations to file "renewals" for persons who's tickets are coming
up for expiration for $5.00.

Of course his solicitations FAIL to mention that the licensee could do it
themselves for 3 minutes of thier time and a first class stamp postage.

There's always a huckster.

Steve

Hello Landshark: Thanks for the complement.

Yeah Gary must think of me as a "Big Strap" on the Super Bowl. Well I am not a Big Strap, and don't have the hardware to talk on the Super Bowl. My Dads CB Amp I gave away to a blind guy, up on the Hill years ago.

But I do think of myself as a Big Strap metaly though, then laugh, at myself thinking I must be getting worse with old age.

Listening to Rock & Roll music, in the Great Mojave Desert .... just down the road ah ways from the fillin station.

A good friend to Big Bob famous CB'er and flossifier. Big Bob would always say "Its always best to use two twenty or even two twenty one fer them linears"

Which side would you ground the shield to? I would think that you would want to ground the shield at the battery. then ground the radio to the chassis inside the cab for the neg connection.

i have called a truce with 2 other hams on your side of the fence and a will attrmpt to do the same here with you because this is getting entirely out of hand.
if you read all of my posts on this subject in the last 5 or 6 months, you will see that the bottom line has NOT really been screw the rules / laws but has been if i / we choose to say screw the rules, you or no one else here have the right to come up on the perverbial high horse and swing a rule book and a brother-bubba-better-than-you attitude at us. my stated point all along has NOT been i'll flaunt the rules. it HAS been, if i choose to flaunt the rules, you, as a human being, have no authority over me to tell me no. you DO however have the right to gather evedence against me to give to the fcc. THEY and THEY ONLY have the authority to change my activities. if you have read ALL of the posts here in that time, there have been hams come on and, in the tradition of a true elmer, try to educate and inform about the legalities of out-band, power operation without benifit of a ram rod.
when this kind of message comes through on an eye to eye, person to person level, you'll see that i didn't go into attack mode.
when someone comes in from behind on their battle horse, screaming the battle cry, "if you ain't ham, you ain't shit", and swinging the rule sword, i make every effort to shoot them right out of the saddle. eye to eye dialog is alot easier to hear as the above mentioned screaming only causes sudden deafness.
i will put down my keyboard on this subject unles attacked again. it is NOT a surender because we still do not agree but i hope we can have a mutual respect for each others views, rights and opinions in the future.
have a good day.
jeff

What's wrong with this? The man is simply providing a service. To many, the convenience is worth the $5.

You could make the same argument about "Mailboxes, Etc." being "hucksters." For a fee, they will pack and ship your items for you. You could do it yourself for less, but that's your choice. Again, you pay for the convenience. You have the option.

Not sure that would be legal even if the power was kept at 100mW (yeah, right!)
Wasn't there also something in Part 95 which required unlicensed, under 10mW
operations to use antennas that were less than 5 feet in length and/or
self-contained (?)

From: Mike Scott <buzzards@mail.idt.net>
Message-ID: <7tl614$ref@nnrp1.farm.idt.net>
Source record: 5298

I have a Uniden PC-66a that will not xmit/rec on channels
6,10,16,20,26,30,36 and 40. All other channels are ok. I tested diodes
D21,22,23,24,25 and 26 all ok. I also tested all pull-up resistors and they
were ok as well. I changed the channel selector switch and this did nothing
either. The LD (lock detector) pin on the pll chip (TC9106) goes low on all
the above mentioned freqs. I Don't have a good schematic or truth table for
the radio so I am asking your help in figuring this problem out. Thank you.

Most linears pull approx 10 amps for every 100w rf power output as a general guide for current requirement.

Face it, its going to happen were ever there are people communicating
over a shared channel/frequency. I hear it all the time on 2 meters.
Once people get a conversation started, they don't like to be
interrupted, yet proper radio communication protocol says that other
stations should be allowed to break in and you should accomadate them.
People who ratchet jaw hate when this happens and as soon as someone
makes an off comment about it, wham, an argument and possible feud
ensues...

I have a 959 that John Mahoney at Panther Electronics did the complete 959 makeover and it sounds great! It is the cleanest sounding radio I have ever heard. John knows his stuff and he only charged me $40 to do all of the 959 mods.
Plus, with John doing the mods, you don't void your two year warranty. He is a certified Galaxy radio repairman.
Send it to John and be done with it. I guarantee you will thank me later and you will be completely satisfied with the radio's performance.

i still don't catch your drift. please be more specific.

>>what are you talking about? aside from the freq difference, the rf
>technology
>and propagation are almost identical between 10 and 11 meters as evidenced by
>the interchangeablity of cb and ham radios to both services<
>
> If it has to be spelled out for you, you are one of those people for
>whom
>the phrase "If you are not a part of the solution, you are a part of the
>problem" was authored.

we have another side stepper here. even when tring to "spell it out" you made a
left turn at buffalo and compleatly lost track of the subject at hand. go back
to buffalo and get your bearings.

>>it's too bad that cber's got there too late. hams have held the patent on
>this
>one since the 1950's.<
>
> Since you bring it up, perhaps you'd be willing to provide us with a
>"for
>instance"...?
i believe that this was in reference to the double speak thing. it would be
helpful if you quoted all pertaining info.
in reference to the 1950's. i believe it was then that cb was born out of the

ham bands. hams can use all of the codes and seudo-noise toys, (computer modems, packet, fax slow scan, roger beeps, ect.), where cb can use only am,ssb voice.
then if we use an item that makes a noise other than words, you all cry foul. you and your ilk would probably call cheat in a hand of solitare.

>>boy, talk about double speak!!!!!!!!!!! all of the hams of the rf police
>persuation act as though God only speaks on ham freqs so don't run that shit
>on
>me boy.<
>
> And how does my asserting that I am no better/no worse than any other
>man/woman equate to my being a mouthpiece for God?
>
actions speak louder than words. when you and the rf police act as though you were God appointed guardians over the air waves to protect the world against the evils of we out-banders, it speaks volumes about how high you hold yourselves and how low you view us.

>
>(SNIP)...>so don't run that shit on me boy.<
>
> So you are saying I *AM* better than you, Jeff? Thanks for the
>complement, but I hardly think so...
>
you do cart-wheels really well.
i tell you to not run your shit on me and you say that i think that you are better than me???
where did that come from?
as a human being, we are no better than one another which has been my point all along. our views and opinions are what clash violently. how you draw a compliment out of my telling you that you are full of shit is beond my comprehention.

> Again, thanks for the compliment, but perhaps if you weren't so
>insistant
>on cramming your opinions on what's acceptable/not-acceptable as far as
>responses top posts, others would just fade away?
>
again i have to complement you.
all you need to do is substitute "as far as responses top posts" for radio operation/ /practices and you would have another great thought. i'll give you an example:

perhaps if you weren't so insistant
on cramming your opinions on what's acceptable/not-acceptable as far as
radio operation/ /practices, others would just fade away?
does this sound familiar?
this is exactly what the rf police do.
this exactly where the impression comes from that these guys think they have been appointed by God. now do you understand my point???

> You make some valid points, but the "yelling" (internet style) and
>frequent blatant profanities only stereotypes you as one of "those" CBers, as
>opposed to the rest who try to make it a useful tool or enjoyable hobby.
>
>73
>
>Steve
>
on this point we have the perverbial pot calling the kettle black. not so much you personally but the rest of the rf police have, at one time or another have used PROFANITIES aimed at me and even if it isn't in capitals, if i whisper in your ear that you are a "fool, asshole, idiot,jerk, dope, mommy's boy or fuck face", it rings the challenge bell just as loudly as if they used a magaphone. if they are going to show the extent of their potty training in this fashion, then i assumed that this is all that they would understand. some also seem to be a little hard of hearing.
well, enough side-stepping of the problem at hand.
we'll go on to the next question.
it's been fun.
jeff

actually it is a 1/3 true. Lightning take three paths.

cloud to ground
ground to cloud and
cloud to cloud.

LIghtning is essentialy the breakdown of the atmosphere between two points. One
will be positive and the other negative. Thus the ground can be negative and the
cloud positive. Or vice versa. In either case the pootential difference in
charge exceeds the dielectric strength of the atmosphere and the result is a
discharge. Much the same as exceeding the voltage spec of a capacitor. It goes
bang eventually.

*Amplitude Modulation (AM)
*Amplitude Modulation occurs when a voice signal's varying voltage is
*applied to a carrier frequency. The carrier frequency's amplitude
*changes in accordance with the modulated voice signal, while the
*carrier's frequency does not change.
****

Not only does the carrier power remain constant during modulation, it simply does not change at all during modulation. What does change in amplitude is the frequencies around the carrier during modultation. Try and think of Amplitude Modulation as frequency translation. The audio frequyency of speech can not travel very far. So some means must be provided to move the audio frequencies generated by speech to another frequency that is more easier to transmitt or propogate over long distances. Thus we introduce the carrier. The carrier is the mixing agent that allows the voice audio to be translated up from the range of frequencies that our ears are able to distinguih, to one that is not distiguisable to hearing. The modulator acts like a mixer. Two frequency sources are injected in and three come out. The carrier and the sum and differences between the audio frequency and the carrier. It is this, the translated audio freqency, that is changing in amplitude because the speech that generated it, is changing in amplitude.

regards
james

****
*When combined the resultant AM signal consists of the carrier
*frequency, plus UPPER and LOWER sidebands. This is known as Double
*Sideband - Amplitude Modulation (DSB-AM), or more commonly referred to
*as plain AM.
*
*The carrier frequency may be suppressed or transmitted at a relatively
*low level. This requires that the carrier frequency be generated, or
*otherwise derived, at the receiving site for demultiplexing. This type
*of transmission is known as Double Sideband - Suppressed Carrier (DSB-
*SC).

937. Re: Wilson vs. Penetrator (1/1)

Newsgroup: rec.radio.cb
Date: 1999-10-08 00:00:00 UTC
From: jdaggett@gate.net
Message-ID: <38015d0c.9770447@news.gate.net>
Source record: 5336

Scot and the group:

Power distribution along an antenna that has no reactive loading components is fairly uniform. That is the power at one end is not much differet from the other end. Antennea with reactive loading elements will not have the power distributed over the antenna uniformaly. Since Power is defined as current times voltage and the voltage and current in an antenna are out of phase, from this we can easily see that power is somewhat uniformaly distributed over the length of the antenna. Again this will hold true for antenna with no reactive components inserted in. As for voltage feed or current feed, this will depend on the tuning of the antenna and where the feed point is with respect to lambda or wavelength.

example:

a halfwave antenna fed in the center will see an impedance of about 73 + j26. At the ends the resistive portion of the impednace can be as high as 1800 Ohms. The current at the feed point is much higher than at the ends. Like wise the voltage is very low at the feedpoint and very high at the ends. Since the antenna contains no reactive components, the cureent and voltage distribution is sinusoildal, (sine wave).

Now with antennae that have reactive components, (coils or caps) the current and voltage are no longer sinusoidal. Ther power radiated from the antenna is not uniform. In fact more power is radiated from the feed point along the length of the antenna to the reactive component.

Thus an antenna loaded with a coil in the center will have most of its power radiated from the feed point along the length to the base of the coil. The radiated power from the antenna deminishes linearly from the coil to the end of the antenna.

Now for base loaded antennnae, coil absorbs a portion of the radiated power and dissipates it as heat. The rest is radiated from above the coil and diminshes linearly from the coil to the end. Also the current and voltage in the antenna is no longer purely sinusoidal. The end will also be a voltge maximum. The base will be a current maximum.

For gain of an antenna with respect to a reference, one must know the pattern that the reference antenna produces. The pattern of enregy from the test antenna that exceeds the boundaries of the reference antenna, this is called gain. In antenna gain must always be referenced to a source. Otherwise the gain figure is meaningless. Antennae do not amplify the power delivered to them. They redirect it. To obtain gain, energy from one direction must be taken and redistributed in another direction. You cannot get something from nothing. The directivity of the antenna is a more important factor than the gain.

regards
james

No good news here. I've seem lightning actually explode a chimney, so given that, the best luck you will have for saving the radio during a storm is to disconnect the antenna. You can use lightning arrestors in-line, ground rods, lightning rods or whatever, but there is no guarantee of keeping the voltage out of the radio. I have a break in the coax with a barrel connector in a nice, rain free location, that I can easily access, and that antenna gets separated when the weather gets bad. Even with this, the voltage can just as easily get back in on the electrical system, so I try to disconnect the radio equipment from the power system as well. Surge supressors don't work for this either. Just cross your fingers and pull those plugs.

just for the record, roger beeps, per se, are not music, are not intended to attract attention but to signal the end of a transmission, do not whistle, ammuse, entertain, arn't used in the begining of a transmission, and damn sure don't last anywhere near 15 seconds.
nope, doesn't sound illegal to me.
in the 51 radios in my collection, only one has a roger beep and it's a HAM radio.
you say hams use them on ssb to signal the end of a transmission?
on ssb cb when the skip isn't exactly optimum and we talk 124 miles GROUND WAVE, it could come in handy at 12 watts pep. incidently, the one on my 2510 stays switched off.

I am asked over and over how to set the drive level into an external amplifier. Let me first say that this is really only a consideration when using the AM (DSB) mode. The
absolute best way I have found... that is 100% accurate to set drive level is so simple... it's elegant! It involves hooking up the set and the amp as they would be normally connected and terminating into a standard (adequate wattage) dummy load. You set the driver level so that when
you are transmitting on AM (DSB) with and without modulation... the DC current through the amplifier stays at the same level. A simple ammeter in the power lead of the amplifier can accomplish this. This automatically ensures that you are putting out the highest dead key possible without audio distortion!

Source record: 5407

You will need two ordinary 50 ohm antennas and two 1/4 wave lengths of 70 ohm coaxial cable (this length depends on the velocity factor of the cable; could be 6-8'). I recommend running conventional 50 ohm coax to each antenna first to tune each for the best SWR. Connect one end of each of the 70 ohm coaxes to an antenna. Tie the remaining two ends together. From that point, you can run any length of conventional 50 ohm coax to your radio.

By the way, this co-phasing harness (the two lengths of 70 ohm coax) does not have to be at the antennas. You can run conventional 50 ohm coax down from the antennas and then use this harness to match them to a single 50 ohm feedpoint.

The advantages of a co-phased array is its directivity. It will broadcast perpendicular to an imaginary line connecting the two antennas. It will have some level of rejection along that same line that passes directly through the two antennas.

The disadvantage is the flip-side of the advantage. You'll have more trouble receiving from the side. Generally, this is not a problem for truckers who want their signal to propagate up/down the highway and are not so interested in reception/transmission off to the sides. Furthermore, another minor disadvantage is the fact that more hardware means there is more to go wrong. These systems can take a little more maintenance than a conventional single antenna.

Another disadvantage is that on most cars the separation between the two antennas is less than optimum. If properly spaced, about 1/4 wavelength, the directive gain will be about 2.5 dB. Since they will not be optimally spaced, the gain will be much less. Almost not worth the effort from transmit end. Reception could be an improvement in the directive pattern though.

The spacing determines the directivity/rejection that you get. As you go from 0 to 1/2 wavelength (18 feet), the directivity goes from none to maximum.

Why not????... that's the only way to get the full potential of the audio section. Yes, you do have to keep your gain under control. That goes without saying...

Thankyou Dave Hall!

<<There are hams that break rules, as there are CBers that break rules. The fact that some unnamed ham or CBer is running illegally, does not deprive another ham or CBer, who IS legal, from pointing out the error of running illegally to anyone asking for illegal mods. Many times newbies are not aware that what they ask is illegal. They may not want to be illegal.

Many people have been in CB radio for years. It is a hobby that has brought them many hours of enjoyment, and made them many new friends. Many of these old time CBers are becoming increasingly disturbed by the "new wave" CBer that has absolutely no respect for ANY rules, or even the simple actions of common courtesy. The "me first, up yours" attitude that has taken over society at large as well as the radio. The old timers are seeing their hobby being destroyed from the inside out, and in many cases are trying to fight back. If I care about my hobby, it IS my business, when someone else treats it with disrespect. Since we all are "the public", we all have a equal share of it, and it everyone's business. It's not like a private affair that you conduct behind closed doors. The radio is PUBLIC, so anytime you affect other people, it becomes their business as well.

I was not trying to put you on a pedestal, I was just impressed by some of the other stuff I have read elsewhere that you have posted, thats all. I would never just tie outputs of a amp together, just saying that you could, I myself like competition, nothing else as far as amps go, I personally dont talk on the CB that much. but when it comes to competition man that stuff is awesome. Some these guys build amps so they can pay the bills, so be it, I just drag racing with antennas, alternators, amps and everything else that goes with it. PURE ADRINALIN!!!!!!!!!!!!

Dat 10 ohm smoke,
Sure make you choke,
Da more dat smoke,

I think you should be asking the question: Why do I want to tune and tweak anyway? Tuning and tweaking has little or no effect out on the air in the real world. To get any real benefit you have to raise the output power significantly... perhaps at least tripling your power for any tangible increase. This can't be done effectively in my opinion without an external amplifier. My advice... don't tune and tweak, go for modulation enhancing mods and couple to an amp.

I have a MaCo CB VFO for sale. It is V-E-R-Y clean
and it works. Output is in the low 11 MHz range,
and it covers about 300 KHz of bandspread. Runs on
110 VAC only. Has one minor modification: I added
an RCA-type jack on the rear panel for the RF output
in place of the hard-wired piece of microdot coax.
Otherwise, it's exactly as I got it (that does not
guarantee there are no other mods, but I don't see
anything obvious that looks modified). Price $25
plus shipping. Will sell to USA and Canada only.

It depends upon how much transmit time you give it, but in casual use you should get a good weekend's outing from them and probably more. You could use rechargable batteries, but be careful of the voltage--a slightly lower voltage could affect the power output/range of the transceiver. You can buy cheap radios or good ones. You aren't talking the difference between a Yugo and a Mercedes here--buy a quality set--Kenwood, Icom, or Motorola. You get what you pay for and the good brands have all the bells and whistles.

My Maxon HWC-40 handheld has a 'low-power' switch that lowers the output from 4w to something significantly less to save the batteries in circumstances where range is limited but the battery availability is not. what is the difference? as long as the radio is not x-mitting more than 4 watts then it is not in violation.

Think you'll like it, have had a couple and they weren't any noisier than 2950's, took a lot less space under the dash, the WX band helped, and good coverage. There are freq. mods, a pretty stout power mod, and modulation mods. If you can live w/o the cute mike, a 575-M6 sounds super on one.

Source record: 5438

in some of the radios with the 9106 chip, it has a digital display. does your display read all of the channel numbers compleatly and with equal brightness? if not, a display segment may be shorted which could affect the signal getting to the program pins.
also look for a cold solder joint or solder bridge in the circuitry from the ch. changer to the chip.
it would also be a good idea to check all voltages it the same circuitry, step by step for each pin / channel sw. line.
i don't have an actual truth table for the program pins as one probably doesn't exist. the pins are arranged more as display drivers. the chip is actually controled internally by an internal rom code controled by the external program pins but i do have the internal rom codes which won't help you much and the vco freqs if it helps as follows:
tranmit n code, ch1= 3345--- rec. n code, ch1= 3254
transmit n code, ch40= 3433--- rec n code, ch 40= 3342

transmit vco, ch1= 16.725 mhz--- rec. vco, ch1= 16.270
transmit vco, ch40= 17.165 mhz--- rec. vco, ch40= 16.710 mhz
this chip has a 455 khz shift pin which give the if freq shift on xmit and rec.
rec = 0--- xmit = 1
this is pin 8
i hope this helps.
good luck.
jeff

Well, I've got the radio now and I plugged it into the cigarette lighter and no engine noise at all! This is on a 2000 Hyandai Elantra. The downside of this has already been mentioned through - the radio will not retain memory because the rechargable battery won't be able to charge up.

It seemed to strengthen the received signal somewhat. It was just laying on the ground [not connected]. Also tried leaning it against the fence at different angles for the heck of it. QRM was less with the horizontal dipole than it was with the vertical.

I did this for the fun of it and not for the purpose of using it for a serious antenna. I was playing with the idea of making my own beam. You know the boom of a yagi beam is just a supporting structure and not really part of the radiating elements. If you wanted too, you could string extra wire in your attic to form a beam. The reflector [back door] needs to be 5% longer than your dipole. The radiator [Direction of signal] needs to be 5% shorter than your dipole. I would put another radiator [5% shorter than the first] in front of that one to form a 4 element beam.

A good site to learn about antennas is
http://members.tripod.com/~cb_antennas/
If you want some good plans look at Maco's support page. It has owners manuals with measurements and all at
http://www.majestic-comm.com/maco

Chicken wire or chain link fence really isn't a good thing to use. It kinda confuses the antenna because the different lengths of wire act as both radiator and reflector. Have fun!

I don't know if the below was a serious question or not - but anyway there are my two cents worth.

I agree. I've pulled at least a hundred TR24s and
TR32s. Doing so makes a CB no different than older
ham equipment where the modulation percentage is
controlled by the operator through proper adjustment
of the mic gain control.

In fact, I've seen cases where power mics caused the
active device (TR24 or 32) to become leaky which showed
up as a distorted TX audio symptom. So, not only does
removing the active device in the limiter circuit
increase performance, it also increases the radio's
reliability.

Yes, but the tech has to be familiar with them and
have service literature.

> I have my Uniden "tuned" for full
> modulation, I'd like to have that done for the Midland as well, but want
> to be sure the CB tech out here has the techsheet just in case.

That's good thinking. Q33 is the limiter transistor.
It must be removed for full modulation. The 79-290
uses surface mount technology, so there are no part
markings on the board. To find Q33 you have to have
a copy of the specific page out of the service manual
that shows the part numbers for that section of that
half of the main board.

The mod for extra channels is very easy as well as
long as you have the proper instructions and a picture
of what has to be done on the control head board.
Don't be fooled by the misinformation that's on a
few CB mod websites that say all you have to do is
press a couple of buttons while you turn the radio
on to access the extra channels. You have to do a
hardware mod, THEN the button pushing stuff works.

I hope this helps.

Yes, a hardware mod inside the control head has to be
performed. Then the button pushing stuff will work.

> tweak anyway?

To increase the apparent loudness of the TX audio.

> Tuning and tweaking has little or no effect out on the
> air in the real world.

That's not true. You're mixing up apparent loudness
with average wattage. You should specify which one
you're talking about. I agree that tuning up a radio
does little to increase its average output from a real
world perspective. However, a tune up does have a
noticeable effect on apparent loudness--that's why
tune-ups are so common.

> To get any real benefit you have to raise the
> output power significantly...

AFTER you've performed a simple tune-up to max-out
the radio's modulation (apparent loudness). In many
cases, with CB, part of a "tune-up" is the process
of setting the radio's dead-key output to compensate
for the positive peak gain compression that's inevitable
when the signal is put through a common CB amp. That's
another part of "tweekin" radios that you've overlooked.

> perhaps at least tripling your power for
> any tangible increase. This can't be done effectively in my opinion
> without an external amplifier. My advice... don't tune and tweak, go
> for modulation enhancing mods and couple to an amp.

A simple tune-up is the cheapest and most direct way
to enhance modulation. After that, antenna optimization,
location optimization (if possible) and finally, average
power increases through the use of an external amplifier
should be one's goals.

How about some more info. Is it biased for use in SSB radios?
What device is it centered around, an MRF455? What becomes the
heatsink, the speaker side cover? Will it work with 10 meter
and export radios without causing instability problems? Talk
to us--don't drop a half-assed ad and run. You don't even
supply any info on how to get ahold of you if someone is interested.
At this point, your post is just unsubstantiated crap.

> for your help.

Do you have a frequency counter? If so, cut the trace to
the lock detector pin and find out where the radio goes on
the channels where it doesn't work. Also, see if you can
figure out the pattern of failure. In other words, see if
you can figure out what PLL chip pin is common to all the
bad channels and see if you can force its logic up or down
to make the missing channels work. For example, put the
channel selector on channel 5 and see if you can force the
PLL chip to give you channel 6 by changing the logic
(grounding to force low or connecting to the chip supply
pin to force high) on a certain pin. If you can't do that
chances are the PLL chip itself is bad. Another clue is
if you find a programming pin voltage that's neither high
or low with the channel selector in any position. Cut the
trace that connects the channel selector switch to that pin.
If you find that the channel selector is trying to switch
the proper voltages to that pin, you'll know that it's the
chip that's skewing the logic voltage. If you can force
the logic high or low and get the missing channels, you'll
probably find that the voltage to a certain leg of the
channel selector switch is low (somewhere between the
voltage that will change the logic of a programming pin
and ground). Tracing back through the switch circuit
should lead you to the problem.

Good luck.

> the amp as they would be normally connected and terminating into a
> standard (adequate wattage) dummy load.

You don't even need a dummy load for the technique that
you describe. It should be common practice to never run
an amp unless the amp-off SWR is 1.5:1 or lower. If the
amp-off SWR is higher than that, you should be concerning
yourself with lowing the SWR rather than how to set the
dead-key drive. When the amp-off SWR (measured at the
output of the amp) is 1.5:1 or lower, the technique you
describe will work regardless of whether it employs an
average reading wattmeter or a DC ammeter.

> You set the driver level so
> that when
> you are transmitting on AM (DSB) with and without modulation... the DC
> current through the amplifier stays at the same level. A simple ammeter
> in the power lead of the amplifier can accomplish this.

So will a simple average-reading wattmeter.

> This
> automatically ensures that you are putting out the highest dead key
> possible without audio distortion!

The technique you describe has been being recommended
for years and years. All you need is some form of
average reading meter be it a DC ammeter or a wattmeter.

> malfunction is at?All help appreciated. 73 Mark

The low bias should be a clue. How is the bias applied?
If it's applied at the cathode there could be a leaky
part that's partially grounding out the bias as well as
the input signal. Work on getting the bias back to
normal and you'll probably solve the low output problem
at the same time.

Good luck.

I agree. Go with something that uses a pair of MRF455s or SD1446s.
These days those types of amps are called 225s. I recommend the
Blue Face type. It will say Palomar 225 on the front. The front
(face) will be blue--that's what gives it away. If you can afford
a little more, go with the Blue Face 200 XL (aka 200 XLR). The XL
amps have more features and are nicer than the straight 225s which
are economy model amps.

I cant speak for the present but the following were the *real* manufacturers of Radio Shack products about 15 years ago:

The Ham radio's were made by The Standard Radio Company - Top notch equipment

Most of the CB's were made by Uniden, amoung others - Well, you know

The Coax was manufactured by American Insulated Wire and The Carol Cable Co. - Not as bad as everyone thinks.....for the money.

RS Shortwave radios were made by the Sangean Co. - Again, top notch

Most of their Stereo's were made by Marantz and Pioneer - These names speak for themselves.

The RS TV's were really RCA

Their antennas were made by Channel Master and Antenna Specialists (Really Avanti)

And, finally their stereo speakers were mad by Technics, JVC or Panasonic depending one how high in quality one wanted to purchase.

Radio Shack is just a marketing company that uses it's vast distribution capabilities to market products that otherwise would be considered quality. However, most people think that because a product is bering a RS name, that the product is junk, which is hardly the case.

Last year I bought an Olympus TV Satellite System from RS that was really made by USSB.

If something walks, waddles and quacks like a duck, its a duck.....regardless of its name.

1025. Re: Microphone for digital effects

Newsgroup: rec.radio.cb

It is very simple to route your microphone into an effects processor and then into the radio. Ive done it myself and Ive gotten some pretty interesting sounding modulation using Digital Delays, Reverb, Compression and others.

All you have to do is take the two microphone audio wires, route them into the "Line In" jack of the effects processor, and then from the effects processor "Line Out" jack, go into the radio's microphone audio pins on the mic connector on the front of the radio. The only other thing you'll have to do is connect a switch to the radio's mic connector pins so you can key the radio when you want to speak.

I'd say that 26 is more like the "The Bowl C-Channel," at least on the West Coast. I hear more big amps and loud radios on channel 11 than on channel 26. In fact, many of the channel 6 "regulars" seem to alternate between 6 and 11, like Mod Squad in Honolulu.

1031. Which Predator antenna?

Newsgroup: rec.radio.cb

Source record: 5481

I get a huge kick out of all the Cbers that "attempt" to carry on long distance communications with their "pumped up" stations. First of all; most of the radios sound like garbage. The solid state (trash) amplifiers are totally distorted. The D-104 mic's are likewise overdriven and sound like shit. Some ops are smarter than others and understand the value of directional antennas. Most attempt to "get out" with their Antron's and I-max 2000's. The "DX" exchanges (mostly one hop, stateside stuff), carried out by screaming into an already amplified mic., last a pathetic few minutes. The weather reports and signal checks..."How many pounds am I giving you" are laughable. The unfortunate truth is that the average CBer has an eighth grade education, and is full of half-truths and cockeyed beliefs about Radio in general. I pity their neighbors. Having to put up with TVI, BCI and RFI is bad enough. But, to also have to put up with the ape-like gibberish that passes for communication must be truly disheartening. The sooner the Bowl is flushed; the better for all the good guys, e.g. the legal operators, who value friendliness and real conversation!

Hi, all

I could comone tell me is the Pro-520 a good radio to buy or not ???

Please email me at moss708@hotmail.com

thanks,

> Does anybody use Nicad rechargable batteries?

I use Nicad batteries in my Icom 4008As' and get 24+ hours.
Most of this is stand-by, with about 5-10 min. tramsmit total.
They are 650mA Everedys. Nicads should be run down to where the radio
won' work anymore before you recharge them. That way you get the
longest regharge life fron them. I haven't seen any reduction of
transmit power with these batteries, but then again, the Icoms are
strong transmitters and that could be the reason.

Sent via Deja.com http://www.deja.com/
Before you buy.

Can you construct an antenna that looks like either a TV antenna or a mini-satellite dish?

Seriously, there is a relatively new Congressional ruling that supercedes home owners restrictions and allows you to erect outdoor TV antennas and small (18") satellite dishes. This is federal law and there isn't a damn thing the local Homeowner Nazis can do about it.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

a magnetic field is generated by current not voltage
current is high at the feed point and low at the end

the top has high voltage but no current so no radiated field

Well this has nothing to do with ham unless you fell for the troll.
By the way I have less than $250.00 in my HF ham station. I would guess that a large number of Cbers have that much or more it theres. So what is the big deal. If you want to talk on the CB and/or Amateur bands you can spend as little or as much as you want. There are jerks on both you have to deal with. The price of equipment is only and excuse. That's my say on this troll line.

>
radiated power is the point
not the power in the antenna

a magnetic field is generated by current flow
ther is no current at the top of the antenna
so no radiated field

I would suggest running about 150 to 200 watts. More preffered 150 or less. It really depends on
thee efficiency of the amp. and whether the power supply is 20A continues or 20A surge.

>appreciated.. Skipmaster 725
>

Well it really depends on your budget. I have read all the post and one important datail you
left out was what were you figuring on budget wise for an antenna. If you are not looking on
spending a Bundle of money on a good performing antenna. A maco V5/8 is a way too go, or you
could keep your eyes out for a good used 5/8 wave antenna. If you have the cash to burn a beam
is a better antenna, but does have a few more bad points. Just to list a few. A beam has more
surface area which equals more wind load. It is alot more assembling than a Verticle ground
plane antenna. Thus it could end up being alot more work to install that beam if you have to put
it on a 65-foot tower. Then there is having to get the right rotor and I would definitly look
into using a thrust bearing. This all goes along with having a beam. Unless you set it up to
talk pointing one way and keep it there.

Another over looked point i noticed was what type of coax are you using. That could be part of
your problem with your interference. I would go with RG-213 or better. espcially if you have a
long run of coax to make.

yes static is wide banded but the radio only hears the static in
the passband (ie) 27.405mc +-5kc

yes it can bleed off other stuf (ie) 0 to 25mc and 30mc up
but the static it hears is still at 27.405mc +-5kc

so why will it bleed of the static but not the signal (ie)27.405mc +-5kc
that you want to hear

I stick with my 148 GTL, and PC-122. The 122 is bone stock, and has the good old D104M6. And the
148 has a modified AMC circuit to give my audio a little more audio (No It's not clipped). A
D104SE attached to it and thats all I need.

With that theory in mind would like to explain that someone can be struck miles away and
not
have a cloud in sight. It is true that there are lightning strikes that are developed with
the
flow of electrical charge and energy that discharge upward.

I also have the question to pose, Does lighting never strike twice in the same place?

Hehe, I may just wire the radio directly to the battery, if I can find a good opening in the firewall to run the wire through. At first I didn't think the engine noise was bad, but it's about as bad as the 2950 was... I just didn't realize it when I installed it because there was so much QRM on the airwaves. When it quieted down at night and I was talking to the locals, I heard lots of noise.

I will honestly say I don't think I have ever seen a True class B amplifier used on CB. If I did
I just Didn't know it.

Most amp designs are class AB, AB-1, or C. I have seen some Single Tube class A amps before. Not
many.

The class B as above mentioned is probably a class AB. I bet, but I could be wrong and that wouldn't the first time nor the last.

I agree for the most part.

I say put a rotor in the top section of the tower and use the thrust
bearing. Start with at least a PDL-II, an M-103, or a Moonraker IV
on the top of the tower. I highly recommend being able to switch
between palarizations (vertical and horizontal). Forget the 5/8 wave.
Re-mount the A-99 10 or 20 feet above the peak of the roof as close
to your operating position as possible (to keep the coax run short).
Use the A-99 to talk locally and to see if the band is open (the skip
is running as much as you want). Then, if things are looking the way
you want them to look, switch to the beam and fire up the amp. A beam
antenna and a kilowatt makes CB a piece of cake. In other words,
anyone you hear you'll be able to talk to. In a way, a beam on a
tower and a big amp takes the challenge out of it. You may find that
you get bored quickly because your system will provide "sure thing"
performance.

Go all the way and remove TR24--you'll be glad you did.
It's like the radio is designed to work without TR24.
Center slot the mic gain and you'll sound great. To
do so seems perfectly natural on that radio.

The 122 is a little different. It has a ton of built in
mic gain and no mic gain control. So, you have to pre-set
the mic gain with a resistor, or you have to use a mic that
has a gain pot built in to it.

I agree that you're very likely to be totally wrong. You mention AB,
AB-1 and C. From that I really don't think you know the difference
between AB1, AB2, B and C as they apply to solid-state amps.

In any case I'll answer the original author. X-Force stuff is good.
Their Class B amps produce no additional distortion on SSB and still
provide you with the maximum possible efficiency.

NOTE: the below is not a Flame. It is the Truth.

I will beging "MY" rant Now: CB is the forgotten band. The FCC does not give a rats ass about
the band. Only, and only if it interferes with emergency communications or commercial communications. They are way too busy Play big brother to broadcast band radio, selling chuncks
of radio spectrum to the highest bidder. And sometimes then they still don't give a crap.

Example: there was a local radio station that was doing a remote broadcast from a summertime
function. The area that they were broadcasting from was quite close to the operator. He fired

his amp up and proceded to cause so much intereference that his audio was rebroadcasted through
the Stations equipment and ended having his audio broadcasted across The AM broadcast band. He
has supposedly been reported (supposedly is the operative word) by a half-dozen or so Amature
band operators. Well he's still out there.

There was another individual that was living close to the state patrol office and dispatch. He'd
fire off his amp and cause havoc with there communication system. The even more revolting thing
was he bragged about it over the air when he caught wind that he was interrupting their comm.
systems. Where is he? you ask. Still out there doing the same stupid thing.

I remember when amps where a real under ground thing. People who didn't know how or where to get
them weren't told. And you had to be in people pretty good to get one. When things where like
that people where a little more cautious with how they ran them, or when they ran them. Now
evreybody has one, wants one, or sells one. Nobody cares, not even the FCC.

I can't believe that the FCC with their all their intelligence, can't figure out there is a gold
mine out there of fines just waiting to be written up. Now I believe that their is a time and
place for power, but "EVERY GOD DAMN DAY?" Now I know some are going to post "well now your
contradicting yourself." Well yes, with a reason. There are just TOO MANY DUMBSHITS WITH AMPS
OUT THERE.

I have been on both sides of the fence I had an amp. I bought my first amp. in 1992. A Silver
Eagle 350, for $165. Yes I went through that stomp, squish mantality. Until the novelty wore
off, then I started to learn how to operate it more civilized. I quit using it to squish people,
and used it in cases where people need help or needed info relayed to some one they couldn't get
a hold of. Finally I really stoped using it at all. It sat in the glove box of my car, and only
got used when needed in times of emergency. Then I got the bug again when a friend gota ahold of
a power supply big enough to run it on a base. I got the itch to do some damage on the base I
borrowed it from him one night to raise some hell. Needless to say it had a voltage regulation
problem. First Key down the supply was putting out 14V after i unkeyed the supply voltage jumped
up to around 18V. Next try, poof! those poor little MRF455's gave up there poor little

lives
trying to satisfy Ohms and Watts Laws. I deserved that!

Between 92 and now I have seen many amps. pop up on the radio, with these people that sit out
there and Tune and load, whistle, adjust, and never have any real type of conversation on the
air. All they want to know is if they are hitting you stronger. You tell them yes, but the sound
like a there audio has been put through a blender on puree, and they are bleeding 6 channels up
and down. They have the audacity to sit there and tell you that that is a sign of "Getting Out".

All these power jockey wannabe's, (Power Jockeys pertaining to ppl that run 1KW and up), sit out
there all day striving to get that 1 extra fucking watt, which won't make a hill of beans
difference in their signal. When I got out of my amp. owning and running streak the thing I did
was sell my amp. off to only selected people that (A) did not abuse the frequency or (B) was way
the hell out away from the county I lived In so I didn't have to hear the dumb bastard. Well
needless to say My last amp went out of state.

It's not that I tell you this to say I did it and you shouldn't, but most of these people out
here are adults, start acting like one and be a little more responsible. I honestly don't mind
if a CB'er has a amp. but don't abuse it. Yes it is illegal, and that's the law. But, so is
Fully auto-matic guns. People still have them, and use them.

I just get tired of hereing, HHHHHHHEEEEEELLLLLOOOO, HHHEEELLLOO!, AAAAAAUUUUDDDDDIIIIOOO!, all
evening long. Or those that will try to play channel god and think they are all big and bad
cause they have an amp. And they can screw up your converstion if they don't like you. They
think they should be respected cause they can do this. I thought like that for a while until i
grew up and started acting like an adult. You take the power away from those people and watch
them get the shit stomped on. Buy stock setups.

"What are the two thing that can take forever to gain and seconds too lose.....Respect and
trust"

On contraire monfrair. A roger beep was designed to let the listening party, which you were communcating with know when you where finished with your transmition. It is especially useful on
sideband even know you'll get your ass chewed for using one when DXing on SSB. I hate when people
get pissed with rodger beep's on sideband. Seeing that most of the time when you establish contact
with another station, be it skip or just a station in the bottom of the radio cause they live in a
RF hole, they tend to transmit when your still talking case sometimes you have paused for a second, or conditions are unstable.

I know for sure that eveyone that has shot skip has ran into that problem.

You know you sound just like the guy that asked came to my father when we were building boat
houses. He asked for advice cause he had never built one. When he asked a question about some
thing a few seconds into explaining the how and why, the man would quickly reply "well I knew
that", after about Four questions, and four "well I knew that."'s. My father looked the guy in
the eyes and said, "Well if know all that you've asked me, why the hell are you asking me then?"

Sounds to me like the same scinario.

You were given an opinion, Why? because YOU asked for one and know you want to bite his head
off.

Seems to me that YOU came here for some answers, and you get a little fun poked at you. You seem
to be going about it the wrong way. It sounds to me that YOU do not know much about what you are
dealing with in terms of electronics. To me YOU just want someone to hold your hand on how to do
a modification cause your to cheap to take it to a shop. For once I will sit here and dside with
Toll.

I wouldn't give him a god damn bit of info. And I'll say it "DrBeltway, why don't you shell out
a couple 4 to $5000, and take you but down to your local community college and sit in class and
learn the theories behind electronics, and learn how to read a schematic. Also the difference
between a self-biasing circuit, and a voltage divider bias circuit. Then, Just maybe then YOU
won't have to ask some of these questions so YOU won't get pissed off when someone pokes a
little fun at you. Get bent, and hopefully thats what Toll will tell you to do too.

The greatest feeling I had when I first got my ATA in electronics was that now I could have everybody think I was their personal electronics tech. that worked for free.

I'll stop right here, Read carefully below to the post. What you posted is for verbatim.

If the signal is an audible tone, it must last
no longer than 15 seconds at one time. If the signal is a subautible tone, it
may be transmitted continuously only as long as you are talking.

Sounds to me as if what you have written is saying a rodger beep is ok to use.

Hello ray It's easy to tell the flow of conversation when it's local and quiet. But with all the
static, or being a long distance station call, and people jutting in between. It gets alittle
hard to follow the "Normal Flow" and hear every "intelligent indicator".

Hell you ain't gotta be an old timer. I've ran a CB for almost 8 years. And the new brood
of
CB'ers, And I bet it may be the same for hams (but I wouldn't know), they act like 16 year
old
brats. Most of them are 30's to 40's I find it rather funny that they used to conduct
delieveries of cookies at 1, 2 o'clock in the morning. The difference was I had to earn my
respect on the radio. They (meaning a group of about a dozen or so all got radios, and all
hooked up with power) thought that with power they should be respected. That went the same
with
a few that went ham, then came back to talk and had this attitude of "well Billy thats not
how
we do it in ham land, it done like this...". I was the whole talking down bit that
imediatly
pissed me off.

Just give Me 6 months of 30 s units of skip static 24-7 and they will leave.

1105. Microphone for digital effects

Newsgroup: rec.radio.cb
Date: 1999-10-09 00:00:00 UTC
From: Quandt@webtv.net
Message-ID: <2713-37FF2D08-2@storefull-111.bryant.webtv.net>
Source record: 5554

I keep hearing these guys out there with some sort of digital microphone that captures one sound and will play the particular sound in a continuous loop for a long as several minutes or more. Not very considerate to others on the channel (me included).

Now I've always thought the people who were transmitting sound loops were using something like the Echo Max 2000. But even the Echo Max 2000 is only capabile of short bursts of continuous looping of sounds, before the sounds finally fade away.

What gives? Are these people in my area buying electric guitar digital signal processors and hooking them up to their CB's? My electric guitar effects board can digitally maniplate any sound and play it basically forever at whatever volume I select. Some synthesizer keyboards do the same.

Anyone know if new these are CB mikes these people are using?

Thanks,

Mark

Has anyone else come across a new FCC regulation for dealers and repair shops that require them to report the name and verified address of any illegal communications equipment received for repair such as amplifiers, radio that have modifications that let them transmit out of the band they were designed for. I understand that conviction carries a mandatory 60 day jail term, and a $10,000.00 fine if not reporting the they owner of the equipment.

Donald,
First you need to get your own email address so it doesn't look like your wife or mother is as stupid as you appear to be.

Next lose the vulgar tag line. It puts you in a class by yourself. You might not want to be in that class, but on the other hand, we know exactly where you are coming from and how seriously to take your comments.

Thanks for sharing that news release about the stupid mother killing her baby. Goes right in there with the mother who put her newborn in the microwave, but neither has anything to do with radio, so please post it to another group.

Finally, for idiots such as yourself who have been operating for years and trashing the frequencies for others, I'm sure everyone here is most grateful. God forbid anyone should tell you to your face that you have bad breath either. Don't want to offend you, even if you are offending the rest of the CB community.

You need to start reading the alt.sex.something group. You might fit in better over there.

I will try to use the short version here cause itend to get wordy and long, and go off on tangents.

Well as I know it Class A the output current, We will call Io flows for the entire cycle of the
360 Degrees of the input signal.

Class B The Io flows for approximately one-half of the input waveform. However two stages can be
used to provide opposite half-cycles of the signal in the output.

I carefully re read what I wrote I see where I could be wrong on the class B part. Mayby thats
cause I look at car stereo (My other hobbie) amps., and the RF amps under the same microscope.

See I'm used to having the pre-amp, and voltage amplifiers driving into two common collector
trans. One for the Pos slope and one for the neg. Thats what I was going on for class AB.

Class C the current flows for less than one half of the input cycle. Typically operation is 120
degress of the Io during the pos half-cycle of the input. The result is produced by doubling the
class B bias and using 2x as much signal drive.

And Class D is a class I don't even want to get into. I'll save that one for RAC.

just tell him ho to do it.. It's a full Wave antenna just take 11808/F(Mhz)
and that is the length of the antenna and then divide that by 2 and make a
full wave antenna for CB Band.

****

Yes the magnetic field is a minimum at the ends of a half wave antenna. The electric fields are not. Then your response most likely forgot about the electric field. That is radiated also. An antenna radiated both an electric and magnetic field. The TEM radio wave that propogates thru the air is comprised of both a magnetic and an electric fields. That is why it is called a TEM wave, Transverse Electro-Magnetic wave. Power density and direction of the wave is described by the Poynting Vector which is the cross product of the electric field and the magnetic field.

The radiated power density from an antnenna is determined by the antenna's pattern function. This, when multiplied by the far field phasors for both the elctric field and the magnetic field, will determine the radiated power density

and in what directions. For a half wave dipole the pattern function is somewhat simple:

[cos((PI/2*cos(theta))/sin(theta)]

By this funnction it becomes quite obvious that at the ends of a halfwave dipole the radiation pattern equals zero. This is why there is little energy radiated directly off the ends and most of the energy is radiated perpendicular to the antenna.

You are going to need equal lengths of 75 ohm coax a 1/4 wave each if I am not mistaken out of each beam to make a matching section which then can be terminated into your 50 ohm coax of any length into your shack. You will end up with a Phased Array.

I just found out that Cobra has redesigned some of their CBs with NightWatch. I have seen pics and now I want one of these. The radio I am looking for is the 29WXNWST. I found one on Bills2Way internet site for around $129.00. This is the lowest price I have seen so far. 1st question I have is does anyone know of anyplace selling this radio cheaper? The 2nd question I have is that I want to sell my 29WX-ST. I have seen some of the 25's going for around $70 on EBay. My radio was purchased in Nov. or Dec. of last year. I need to know what a fair value on the radio is. It is basically in near mint condition. I saw near mint because it is used and I have no box for it. I do have the manul and everything that comes with it. So what should I ask for it? I don't want to go no less than $70. Does anyone want to buy it? Or should I take my chances with E-Bay? Thanks, ryan

Folks,

I am the writer who has been posting a notice about research I am doing. I did not know that it is illegal for someone to tell what is heard when scanning. (I told you I was finding my way around!) Someone emailed explaining this. Sorry, I didn't intend to put anyone

in a compromising position.

Regards,

Thomas

Before we get too far off the question, <:, a 1/2 dipole was not the antenna in question. The original description was about a 1/4 wave whip. Also, how does all of this explain why it's easier to light a fluorescent tube at the top rather than the bottom of the antenna? The antenna I use is a KW-7. A 4 watt tube taped to the top lights everytime, barefoot! I have also seen the light lite at the ends of a dipole.

After your last blast, I shouldn't answer you...

A single blast of lightening consists of several strikes through
the same path. It happens so fast you see it as one strike.

>
> I do to since these CB ops DO get out all over the U.S. and Canada and
> have great qso's and they do it on much less money than it would cost
> if they did it with ham gear.

Thats the stupidest thing I've heard,since when does ham gear cost
more? The wire to build a 10 element vertical Yagi(or any other 10M
antenna)is cheaper than building one for 11M.
Some of the low power rigs are cheaper than a 148GTL.Sure you CAN
spend more but the quality and performance is there,the best CB stuff
isn't all that great,wish it was.
Actually it's easier to talk all over the world on 10 than on 11
because it isn't so crowded ,the ops are usually a little more
polite,there are many good reflectors,the forieghn ops speak english,the
forieghn ops run the same freqs we do.

I have a wierd situation I was hoping someone here might be able to help with. I'm using a Midland 79-290 radio with a Big Foot 1/4 wave antenna. When I transmit with the radio on AM, I don't get a full scale, it goes up to about S8. When I hooked up the SWR meter to the radio, it went to full scale when I keyed up. Any idea why this might happen? Does the lower reading on the scale when I don't have the SWR meter hooked up indicate a problem? With the meter hooked up, I show less than a 1.5 SWR with power on AM around 4 watts. I had a Wilson 500 hooked up to it and I got a full scale with that antenna, but when I tested it, I got an SWR of 3.0, so I obviously have to go with the Big Foot antenna.

> 10 ohm resistor,through rectifier and on to g2.

Okay.

> Should I be looking for a
> leaky cap that is grounding out my input somewhat ?

That's a possibility. Scope the input signal path
to make sure the input signal isn't being attenuated
too much on it's way to the cathodes. You say the
tubes tested 75%; is that on a gain (transconductance)
test or an emission test? Sweep tubes will show good
on an emission test even when their gain is low.
Check the input (beteween radio and amp) SWR to make
sure the amp's input circuit is fairly resonant with
respect to the radio.

> Is -14V about right
> for bias on g2

No, it should be lower than that. As the grid goes
negative the bias decreases. To increase the resting
plate current the grid has to be made more positive
with respect to the cathode. On the other hand, if
the tubes are flat, the bias voltage could be correct
but there's just not enough emission to cause the
proper amount of resting plate current. I'd feel alot
better if you could provide transconductance figures
for those tubes. As I remember, that amp originally
used 8950s just like the 700-CX transceiver used in it's
TX output stage. I may be wrong, as it would be alot
of work for nothing to change from duodecar sockets to
novar sockets. In any case, you should expect at least
10 dB from that amp. That means 100 out for 10 in. So,
either the input signal is being attenuated, the output
is out of resonance (if that were the case you'd probably
notice the excess plate dissipation right away), or
something is effecting the amp's ability to produce
an adequate gain. You need to be able to explore all
of those possibilities.

Because you don't agree with the method you call
the people who apply it idiots. However, just
telling people not to do something isn't enough.
Put your experience where your mouth is. Tell
us why it's the wrong thing to do and what is
the more appropriate thing to do.

> This is
> something OLD.

That just backs up the fact that it's not a bad thing
to do. If it were such a bad thing it still wouldn't
be so commonly done.

> "You Don't Know Jack"

I'm certainly glad I don't know you.

In my opinion, you're just another puke that can't
get past the word "illegal." The problem is that
you're a tech and you do your customers a disservice
by purposely limiting the performance of their radios
because of your belief system. I'm sure you take in
tune up jobs too. I've seen guys like you. You take
the customer's money, set the carrier wattage at 4,
the AMC at 100% modulation, the ALC at 12 watts PEP,
and give the radio back to the customer saying that
it's doing "all it can," "all it should" or some other
crap to that effect. It bothers you when other techs
remove limiter transistors, but lying to and short-
changing your customers when it comes to their radio's
performance doesn't bother you.

Think about it.

SWR is always the concern with performance. Don't try to select an antenna that puts the meter in a certain spot you think is right... make the antenna match right and then look at where the meter falls. If you don't like the meter position, merely adjust the meter deflection inside the set with the potentiometer.

Do you even know what a rhombic antenna is? it is a FULL Wave antenna. Moon raker is far from being Full wave even stacked. you take the horizontal and vertical driven element and see if there as long as the formula that I give you is. I bet it is not.

Rhombic = 11808 / F(Mhz) = total length.

11808 / 27.205 = 434.403 feet.. No way would you have a moonraker stacked at even 200 feet.

My opinion is that a moonraker has full wave elements for 11 meters.
Roughly 9' on each side of each element...
Maybe stacked is the wrong word... implying several complete antennas...
maybe a four element rhombic array would be a better term for a moonraker.

> the power? I want a powerhouse. I don't care if it weighs 100 lbs.
> when
> i am done.

Then why are you against running an amp?

Amplifiers are designed to deal with the extra heat and
DC input power required to produce "powerhouse" levels
of output power--radios alone are not.

A simple tune-up and a $100 amp will blow away ANY mod
that ANYONE could do to that radio at ANY price simply
because the radio is limited by how much DC input power
and heat it can deal with. Look at the radios that
make 100 watts--they have linear amplifiers either
hanging out the back or hanging off the bottom AND they
don't perform as well as an equivalent separate radio/amp
combo.

Just suck it up and face the fact that if you really
want a "powerhouse" you'll HAVE to use an amp.

> What does cutting R104 do,what do VR6 and VR7 do? I don't
> know allot about radios or modifications, but I am really interested in
> learning so any information will be appreciated.

Bypass the modulation limiter (remove TR32), set the carrier
(dead-key) wattage at 2 (that's what VR6 does, VR7 sets the
SSB output power), peak L36 for maximum MODULATED output power,
and buy an amp.

>described by the Poynting Vector which is the cross product of the electric
>field and the magnetic field.
the electrostatic field requires the associated magnetic wave to propagate
with out the magnetic field the electrostatic field will decrease at a high rate
with increase in distance

normally becoming negligible about 1 to 2 miles from the antenna
>
>The radiated power density from an antnenna is determined by the antenna's
>pattern function. This, when multiplied by the far field phasors for both the
>elctric field and the magnetic field, will determine the radiated power density
>and in what directions. For a half wave dipole the pattern function is somewhat
>simple:
Yes but that is a complicated way of puting it
If you take two points along the antenna.
at right angles to the plane of the antenna
the fields will add
the grater the angle the phase differece will increase
and the instantaneous field level will go down
along the plane of the antenna the phases will cancel

>
>[cos((PI/2*cos(theta))/sin(theta)]
>
that is the formula for a half wave dipole in free space
this has nothing to do with the amount of power radiated
at points along the antenna
it deals with the direction the power is radiated
>By this funnction it becomes quite obvious that at the ends of a halfwave dipole
>the radiation pattern equals zero. This is why there is little energy radiated
>directly off the ends and most of the energy is radiated perpendicular to the
>antenna.
Yes that is correct

I am talking about at what point the power is radiated along the antenna
not the place it will go

>
the florescent tube is in a high voltige field
it is like a tesla coil but it has a 100+ volts at 27Mc or so
not a Mv or so at 100kc

at the top the voltage will ionize the gas in the tube
at the bottom it is only 15 to 20 volts which will not ionize the gas

it don't nead to contact it the capacitive affects will couple the
required voltage to do the job

Source record: 5651

10-7 wrote:
>
> Bill, did you jump on the x force wagon because of #12's input or his
> designing of the bias circuit.

Yes. I also had a hand in designing that bias circuit because
Dennis and I were both doing alot of bias circuit experimentation
back when the X-Force bias design was on the drawing board. We
pooled the info that was the result of our research. The result
is fantastic but expensive in CB amp terms. Fully regulated with
proper temperature tracking is all you could hope for and it's
there in the X-Force product.

Also, I have a ton of respect for Dennis. He's good with this
CB amp stuff. I have to admit that Dave may be even better, but
I have to go with who and what I know. Dennis has been here and
earned my respect. I have tons of pictures and anecdotal reports
that say the X-Force product is top-drawer. I've never corresponded
with Dave, and no one I know uses his product. What can/should I
do? I stay neutral with respect to Dave--that's all I can do.

If you look back, I've tried to be neutral all along. I'm on the
west coast; I don't see the high-end stuff that's prevalent in the
mid-west, south and east. Out here it's Pirate and Skullcracka;
which, in my opinion, are both substandard compared to Dave Made
and X-Force. I'm finally starting to form opinions as to the
highest end stuff, but I have to (for the time being) give the
nod to X-Force based on personal experience. On the other hand,
if you look at my posts, you'll find that I usually mention both
as though they're equals. Alot of that is based on what you've
said in the past about X-Force starting out as a Dave Made clone.
I choose to believe that and figure that everytime someone says
something good about the X-Force product he's also complimenting
the Dave Made product.

The best I can do is to say that either is a good choice but that
I have a more direct connection to X-Force so my posts may tend to
lean in that direction.

> And is class "B" as efficient as class "C" For AM use.

Not as efficient, but it provides extra gain that could be
helpful in certain applications.

On SSB, Class B bias is the most efficient class of
operation when no audible distortion is a requirement.

You have to remember that solid-state CB amps that have
no positive DC bias applied are not true Class C amps.
They are just on the Class C side of Class B. That's
why they produce a distorted but useable signal on SSB.
A true Class C RF amp using bipolar transistors has to
have a NEGATIVE DC bias applied to the bases of the
transistors. That's never the case with CB amps.

1203. Re: Uniden Grant channel mod

Newsgroup: rec.radio.cb
Date: 1999-10-09 00:00:00 UTC
From: Bill Eitner <kd6tas@netzero.net>
Message-ID: <37FFE833.2D1FB560@netzero.net>
Source record: 5652

There are several approaches to the 8719 channel mod. That's probably
why you saw so many. Since you're a newbie, you should go with the
easiest and most common mod. The easiest mod is to set up two switches;
they can be front panel switches that you isolate, or they can be
switches
that you add on. In any case, one switch should be set up to ground pin
10, and the other should be set up to connect pins 11 and 12 together.
That's all there is to it. The coverage (with a few gaps) will be
26.815
(15 channels below channel 1) to 28.045 (64 channels above channel 40).
After you've done the mod, don't go nuts with the high channels. The
radio is only designed to cover the original 40. When you go outside
that range the performance drops off. You can use all 15 lower
channels,
but I wouldn't venture above 27.805 unless you're talking to someone
locally that has a strong signal.

Good luck and have fun.

$110. No one has bid on it yet because of that. If the guy
was smart he'd of set the reserve at $110 and the starting bid
at zero or $5. He shot himself in the foot in that he doesn't
know proper auction strategy. The idea is to start the bidding
low. Then, hopefully, you'll get 2 or 3 guys trying to outbid
each other in order to "claim the prize." I've seen that strategy
work to the seller's advantage time after time. For example, if
you manage to get 2 or 3 guys going at it, you can end up getting
2 or 3 times the reserve (the least you expected to get) easily.
On the other hand, I've watched decent deals (like this 79-290)
die on the vine (never get a first bid) because the seller set
the first (minimum) bid too high. The mistake is that the seller
is setting the minimum bid and the reserve at the same price. The
reserve is unknown to the bidders, but the minimum bid is not. It's
common sense; set the reserve at the lowest price you'll accept,
and set the minimum bid low to generate interest in your item. If
the reserve is not met you're not obligated to sell the item. What
could be easier? The problem is that alot of the users of E-Bay
(and probably every other auction site) just don't understand basic
auction strategy.

Substitute a dummy load for the antenna and note what the radio's
meter says. When you hook an antenna to the radio you should see
the same thing when the antenna is tuned correctly.

> transmit without the meter is ok?

Probably; based on what you said the SWR was with the
1/4 wave.

> I'm not experiencing reduced performance?

That's another good indicator that everything is okay.

Again, a way to be sure is to sub in a dummy load and
see what the radio's meter does. In my experience,
the meter shouldn't read full scale unless the SWR
is high. Normally, the reading will be two-thirds
to three-quarters and will increase when you modulate
steadily (whistle, hum or hold the first syllable of
a word like "audio").

Check it out and see what you come up with.

1209. Re: Question?

Newsgroup: rec.radio.cb
Date: 1999-10-09 00:00:00 UTC
From: Bill Eitner <kd6tas@netzero.net>
Message-ID: <37FFF22A.B40052E4@netzero.net>
Source record: 5658

Fortunately, power supplies work in average power while CB amps are commonly rated in peak power.

So, a 10 amp at 14 volt regulated supply can provide 140 average watts. CB amps are about 50% efficient, so a 140 average watt power supply can run a 70 average watt amp. So, a CB amp that's called a 225 but only peaks at 180 will only hold a 60 watt average on most of today's high-end wattmeters (like Bird and Coaxial Dynamics). So, in reality, if you're not overdriving the amp with dead-key input, a good 10 amp supply will run a 225 on AM.

On SSB it's a different story. The rule of thumb is to double the AM current draw when considering SSB use. That means our 225 requires a good 20 amp supply if the owner expects to successfully use the amp to it's full potential on SSB.

That completes today's lesson in Amplifiers 101. This material WILL be on the final exam. ;-P

A mediocre beam beats a great omni. Run both. Put a conservative
beam (2 to 4 elements) on the tower, and the A-99 on the house.
It's a no-brainer. You're wasting the tower by only using it
to support an omni.

The freq mod is super easy for the tech with the info.
The job is to find him. If all else fails, send me the
control head and $15. I'll do the mod and send the
control head back.

> open the
> clairifier

The coarse clarifier control is already opened.
It's opened from the factory. Just don't tell
anybody. ;-)

> and turn down the watts (if needed) to drive my amp.

If all else fails, I can do that for you too.
Remember that Q33 has to be removed too (for
max modulation in all modes). It's especially
important when the dead-key is set to a low value.

I do the whole mess for $40 including some
broadband tuning that I'm not mentioning here.

If all else fails, I can do your radio for $50.
That's $40 plus $10 for return (conus) shipping.

If you become interested my e-mail address is good.

Good luck and 73.

If you go with a set of stacked threes you can use a longer mast pipe and put both the omni and the beams on the same tower. It works like a charm.

I agree. Unfortunately, the only one I've been able to listen
to is Dennis. I'd like to learn from both. In fact, what I'd
really like to do is set up situations where I could pit one
against the other. Each one of those battles would undoubtedly
expand the envelope of CB amp technology for all of us.

> > I stay neutral with respect to Dave--that's all I can do. If you look

Thanks. I realize that I'm farting around in an area where I
really don't belong due to where I live. It would be really
easy for people to tell me I don't know what I'm talking about
and I'd very likely have to agree. I try to answer questions
without stepping on toes--but I can't always do that to everyone's
satisfaction.

> Alot of that is based on what you've
> > said in the past about X-Force starting out as a Dave Made clone.
> ----------
> ----------
> and they still are from the ones i have seen first hand, not counting the
> base amps

There you go. I agree. The base amps are the ones that are
heavily influenced by Dennis. What's interesting to note is
that the mobiles are beginning to go in the Dennis direction
too. In a year or two X-Force and Dave Made will very likely
be different enough to be honestly considered to be separate
entities. At that point we'll be back to using competition
results as the only measure of which one is better.

Thanks for the reply Bill.

You're more than welcome.

Viffer wrote:
>
> you have to pay ebay even if the item does not sell. that is why people
> don't set the minimum bid too low.

The amount that you have to pay E-Bay is nothing--and they'll let you post the same item again if it doesn't sell for free. Think about it. E-Bay sets the rules. They set up the reserve and minimum bid systems. They pretty much lead you to the strategy that I laid out. Look at say a dozen successful auctions and tell me what the common threads were throughout those auctions. I guarantee that you'll notice a low minimum bid, a well written explanation of the item and terms, and at least one decent picture of the item. What I've just laid out is as close to a formula for success as you can get.

Because of the reserve system that E-Bay uses, there's no reason whatsoever to set the minimum bid at any more than $5. If the reserve is not met, you're not obligated to sell the item. It's that simple. The reserve is not disclosed to the bidders; therefore, they don't know whether they might be getting a killer deal or not. That's the trick. Use the hidden variable to your advantage.

Also, what makes you think setting a high minimum bid will guarantee that the item will sell? It's just as likely that a high minimum bid will prevent anyone from bidding on the item. In fact, that how it usually goes. People bid when they think they can score a killer deal. A high minimum bid guarantees them that they won't score a killer deal.

I hope this helps.

You just got a bad one. In general they aren't that bad. All mass
produced 10 meter rigs have to meet production cost guidelines;
therefore, none of them are 100% bulletproof. I've said it before
and I'll say it again, ALL serious CBers need to have backup equip-
ment. A backup radio, a backup mic, and a backup antenna are required
these days due to the corners the manufacturers have to cut to meet
production cost guidelines.

>

The turbo mike will NOT do continuous sound loops, nor is there a "sampling" mike. There is a device that will record up to 20 sec., and that could repeat over and over, other than that it would be as Wildcat said which would be musical effects equipment.

i have seen some radio, antenna combinations give strange readings.
if the swr was high, it seemed as though the higher swr reading would "draw"
more power from the radio hense a higher meter reading. the lower swr would
result in a lower meter reading. a different brand of radio on the same high
swr antenna setting would result in a lower power output.
i'm not sure what processes were at work there but this was my observation.
the only thing that i can think of would be some high swr protection circuit
inside the radio which do exist.
good luck
jeff

*> some data?.
*
****

A Moonraker is a yagi and not a rhombic antenna.

Gino:

1) how much property do you have?
2) where do you wish the main lobe to point.
3) Do you have access to large wattage no inductive resistors in th evlaue of
300 to 2000 Ohms?

for a terminated rhombic the terminating resistance will be 300 to 800 Ohms. The
actual termination resistance will depend on the characteristic impedance of the
antenna itself. Depending on the tilt angle the length of each leg of the
rhombus will vary. For a tilt angle of 60 degrees the optimum length of each leg
is 2 wavelengths. Thus you will need to have about 144 feet or 88 meters of
wire.

for a unterminated rhombic, the length of wire on each leg should be resonant
lengths. Unterminated rhombics take more care in tuning than the terminated
variety. Also it is good to get the whole structure at least 1 wavelength above
ground.

*>It certainly is a stacked rhombic...
*>
*>
****

In fact the rhombic is longer than a full wavelength. In order to get a decent gain and directivity out of a rhombic the leg length should be 4 to 5 wavelengths per leg. At 11 meters you are looking at 166 to 200 meters of wire to make up the antenna.

simple. a 1/4 wave antenna is nothing more than a 1/2 wavlength antenna cut in
half. Fed at the same point that a 1/2 wave antenna would be, the impedance at
the rfeed point is about half that of the center fed dipole. The end of a 1/4
wavelength antenna will also be a voltage maximum like that of a 1/2 center fed
dipole. Thus the center fed dipole and a 1/4 wavelongth vertical will have high
voltage at the opposite end from the end. Since it is the elcetric field at the
end of the antenna that will excite the gas in a flouresent tube, a 1/4 wave
vertical and a center fed dipole will both ligth up a flourescent tube.

>answering machine with no return call.. What do you think on their Son of a
Gun base antenna...Also, I do run 213 coax, it is a 100 foot run<

1. I think the Jo Gunn verticals are a waste of money. The Maco V58 is a better antenna (so I've heard) for less $. The Imax 2000 IS a better antenna, for I have one and have previously wasted $ on a Jo Gunn. I modified my Imax and put a modified Maco GPK on it.
2. I have usually in the past used Belden 9913. I made the mistake of changing to RG213 once, (much increased RFI/TVI), went back to 9913, would also recommend the few extra cents per ft. and get the Times Microwave LMR400.

*>Yes the magnetic field is a minimum at the ends of a half wave antenna. The
*>electric fields are not. Then your response most likely forgot about the
*>electric field. That is radiated also. An antenna radiated both an electric
and
*>magnetic field. The TEM radio wave that propogates thru the air is comprised
of
*>both a magnetic and an electric fields. That is why it is called a TEM wave,
*>Transverse Electro-Magnetic wave. Power density and direction of the wave is
*>described by the Poynting Vector which is the cross product of the electric
*>field and the magnetic field.
*the electrostatic field requires the associated magnetic wave to propagate
*with out the magnetic field the electrostatic field will decrease at a high
rate
*with increase in distance
****

In the case of energy being radiated off an antenna we no longer have staic conditions. The electirc field produced off of an antenna is directly related to the current flowing through that antenna. You must also take into consideration that in antennae with no rective copmponents, The current is a sinusoidal waveform. It does not matter if it is a 1/2 wavlength dipole or a 1/4 wavelength vertical. The current and voltage in the antenna is sinusoidal. The energy being radiated from the antena is radiated from the whole antenna not matter how it is constructed. The current is flowing thru the whole antenna. It never flows thru just a part of it. Durin one cycle the current at the feed will be a maximum at 0 and at 180 degrees. At 90 and 270 degrees the current will be a minimum. The voltage at the feed will be out of phase by 90 degrees. Thus at the end of the antenna, when the current is minimum, the voltage will be maximum. at other time the voltge will be a minimum and the current will be a maximum.

Try and see this example.

Sound is reproduced when say a guitar string is plucked. The wave produced off the string is controled by the length and the whole string is vibrating. So is the same for RF. Like the giutar string, the RF energy radiated uses the whole antenna.

Now reactive components alter the current distribution within the antenna. Current will still flow thruogh the whole antenna. It no longer will be a sine or cosine function. The reactive component sees to that. A load coil will not stop an antenna from radiating above it. It will affect the pattern function.

Thus the pattern off the antenna is distorted from that with no reactive components.

Yes the plane wave that radiates off of it needs both the elcetric and the magnetic fields. Poynting's vector requires both. The definition of a plane wave needs both.

The energy in the plane wave is alternating back and forth between the magnetic and the electric field as it propogates. That propogation is either throuogh ground waves or sky waves.

****
*normally becoming negligible about 1 to 2 miles from the antenna
*>
*>The radiated power density from an antnenna is determined by the antenna's
*>pattern function. This, when multiplied by the far field phasors for both the
*>elctric field and the magnetic field, will determine the radiated power density
*>and in what directions. For a half wave dipole the pattern function is somewhat
*>simple:
*Yes but that is a complicated way of puting it
*If you take two points along the antenna.
*at right angles to the plane of the antenna
*the fields will add
*the grater the angle the phase differece will increase
*and the instantaneous field level will go down
*along the plane of the antenna the phases will cancel
****

It may seem commplicated but it is true. And really not that complicated once you visualize it.

****
*>
*>[cos((PI/2*cos(theta))/sin(theta)]
*>
*that is the formula for a half wave dipole in free space
*this has nothing to do with the amount of power radiated
*at points along the antenna
*it deals with the direction the power is radiated
****

Yes this is true. It shows how energy is radiated off of a given antenna. This concept holds true for all antennae. It helps to describe the power density around the antennae.

****

*>By this funnction it becomes quite obvious that at the ends of a halfwave dipole
*>the radiation pattern equals zero. This is why there is little energy radiated
*>directly off the ends and most of the energy is radiated perpendicular to the

*>antenna.
*Yes that is correct
****

thanks. I knew I had to get something right.

****
*I am talking about at what point the power is radiated along the antenna
*not the place it will go
*>
*>
*>regards
*>james
*>
*thanks for taking the time to post
****

I think that I have answered that now. In a nutshell the whole antenna radiates.

regards
james

A good quality ext power supplied meter will normally show true readings and keep inline impedance constant. A cheaper meter will change impedance and tx meter circuit characteristic's. Put the swr meter at the antenna connection and see if you get the same results. I think you will not get the same differences.Hence meter quality?

I was just curious if anyone had heard any other reports about shoddy quality in 2950's in the past couple of years. I have a 2950 that was bought in the last couple of years, and it had more cold solder joints and loose connections than I could count. I spent 3 hours repairing the board. Now the damn power connector on the radio came loose and shorted out inside the radio. Now I cant get it to power up without it blowing a fuse. Should I give up on rangers now or what?

Yeah Bill, and you have dreams
about someday knowing what you're talking about!
Guys like you have been butchering
radios like this for over 30 years! Guys
like me (and there are damn few) spend our
days explaining to our customers why
guys like you do things like this to
their radio equipment! Remember, I'm
the "no parts in, no parts out guy"! You
have the figures all wrong! I'm the guy
who uses peak reading measuring equipment
to measure the power output of am and
ssb transmitters! (stupid me) I'm the
guy who can get 30 watts ssb and 25 watts
am out of a 148gtl/Grant XL without
destroying the amc/alc circuitry! Somewhere
down the line you got this idea that if
you can't do it then it can't be done! And
you're the one with the open mind?
Just because everyone does something
the wrong way doesn't mean it's the
right way to do it! That's the kind
of abstract thinking that i've learned
to expect from you!
Obviously you haven't been paying
any attention to any of my previous
posts here so what's this bs about
participation? And I have never used
the word illegal on this ng! You can't
have any participation with someone
who can't remember what someone else
posted! If you don't know me then how
can you make the statement that you've
"seen guys like me"? You're so full
of self contradictions that you don't
know whether you're coming or going!
What is apparent to me as well as
others here in this ng is that you
think yourself to be some kind of
authority figure when it comes to
communications. My question is, if
you're so damn sharp, why aren't you

in some ham newsgroup instead of
hanging out here peddling your wares?
Is it because by comparison, you
pale in the presence of your peers?
Go into to one of the ham newsgroups
and try to convince some of those
guys to disable the alc circuits in
their expensive amateur transceivers
and amplifiers. See how many of them
follow your advice! Or maybe you have
tried that only to have them laugh you
out of the ng and that's what you're
doing here! I would simply put this
to you....that maybe you think more
highly of yourself than you ought to!
That maybe you find yourself talking
up to fellow amateurs, and finding less
resistance talking down to cber's is
somewhat more to your liking because
it affords you some illusional "perch
of authority"!
Your answer is to broaden those
signals, increase the splatter, damn
those thd products and full speed ahead.
This is the old way and it's been
going on for far too long! The time
is long overdue........it's time to
realize that we don't have any consideration
for our fellow operators when we operate
"trashy" equipment such as this within
the narrow spectrum which is cb radio!
I may be a lot of things, but closed
minded is not one of them!

Jack

If you size it up we are only trying to have fun, its not like we are robbing a bank or harming these certain CB cops kids, or breaking into there house. Simply put just good clean fun, thats all. most of the guys who try to police illegal cb use are probably trying to fit an image that they think comes with the ham radio hobby, I have a lot of friends that hold their amateur license and they do not act like this, they are more concerned with real life values, not something that makes about as much sense as "who didn't come to a complete stop at the stop sign in front of the school today?" even though they were only driving 10 miles an hour. man give me a break man, they had just as much fun when they talked across the world on their cb radio, me personally, I think that they are all very bored, enjoy bosting to their friends about how screwed up the cb is, anyway I agree that it is cool that these guys try to help, and I will continue to try and help, even if the cb cops disagree!!!!!!!!!!!!!!!!

Dat 10 ohm smoke,
Sure make you choke,
Da more dat smoke,

Good morning friends and welcome to another episode of "The Bowl". This morning on the bowl, we heard several folks complaining about high income taxes. Boy were they worked up! Of course, these folks have never actually paid income tax, since that would neccessitate having had been employed at some point. We know they are not employed since they seem to be on CB radio 24 hours a day. These CB Sociologists, let's call them, rant and piss and moan about government, although admittedly they don't vote! Let's see now...they don't work, don't vote, and spend all their time bitching on "the bowl." They collect government subsidies, yet seem to have plenty of dough for the latest Taiwanese splashbox, echovomit microphone with rogergeek, Texas Spur amplifier (transmits on all forty!), and I-Spaz antenny.Oh... I forgot to mention these folks are white. Irrelevant you say? Not at all friends; these are not the self styled, disenfranchised, people of color. Nor are they refugees from some far-flung war worn land. Nor are they disabled in any way. No friends... these are typical, low-life, uneducated, unwashed, white trash CB RADIO OPERATORS. Exactly like some of you reading this message. The good word from here is...GET A LIFE YOU LOSERS! Stop smoking those Marlboros and eating Wendy's at the Microphone all day. Use your welfare checks to better yourselves, or better yet, get a job! We now have the lowest unemployment rate in 30 years. You have no excuse anymore! Show some respect for yourselves and read a damn book. Do something, but for God's sake; get off your dead ass and get off the bowl. It's killing the last vestiges of brain cells you ever had. And the scary part is...they don't grow back!

Check e-bay policies again. E-bay now charges for reserve auctions. It's not a lot depending on the price of what you are selling but it does add up if you are selling a lot of different things. My Fianc&#65533; and myself do a lot of selling on e-bay and believe me the charges can add up over a few months.

It's just polite to use lower case letters when on the internet. Upper case is for increased emphasis or 'yelling.' As long as you continue to use upper case letters when you try and converse anywhere on the internet people will continue to ask you to 'lower your voice.' Either you can fight it, resorting to more and more abusive and loud speech, or you can just hit that little button on the left side of your keyboard (caps lock) and join the rest of the community speaking in a level tone and not YELLING!

A Moonraker may have a rhombus shape but it is not the type of antenna people are refering to when they talk about a rhombic antenna.That would be like saying that a carp skeleton at the end of your feedline is a fisfbone antenna and maybe in your mind it is but it is not what people are talking about when they mention a fishbone antenna.

By the way, it is also in the 1987 manual on page 16-14. It is figure 24.
It is probably reasonable to assume that it is in the 1988 manual as well.

Even if your ARRL manual does not have the graph, it would surprise me
if it didn't have some text regarding the effect of line loss on the
VSWR measurement at the input of the transmission line. Let me quote
what the 1987 book says:

"The VSWR as measured at the input or transmitter end of the line will be
less [than at the load], depending on th eline attenuation. It is not
alway convenient to measure VSWR directly at the antenna. By using the
graph shown in Fig. 24, however, you can obtain the VSWR at the load by
measuring it at the input to the transmission line and using the known
(or estimated) loss of the transmission line.

"For example, if the VSWR at the transmitter endo of a line is measured
as 3 to 1 and the line is known to have a total attenuation (under
matched conditions) of 1 dB, the VSWR at the load end of the line will
be 4.4 to 1."

Satisfied?

By the way, this directly contradicts Toll Free' claims.
Toll Free said:
> No you won't. You see different SWR readings due to voltage standing
> waves on the coax... Not due to the losses in coax!

Whom do you believe? ...the ARRL or Toll Free?

The stinger 100 was never biased for ssb. It also had 1 MRF 455. It had a preamp and on/off also. This board never worked very well as the RF circulating thru the radio developed oscillation and major shielding had to be used. Average output was about 55 watts PEP. Also this unit was made by the same folks that made the Elite Black Face Units.

no and i don't think you have either. this, i'm guessing, is why you posted
this as a question.
since the fcc removed the requirement of a license to repair cb radios, this
would effectively remove the shop from the fcc's control unless he did the
mods. it's not the shop's responsibility to play rf cop.
how would he "verify" the address, go follow the radio owner home? not my job.
i heard about 10 years ago that if you sent a president 2510 back to uniden for
repair that had the cb mods, they would turn you in voluntarally.

O
snip

>Yes. Changing the length of the coax does not affect the SWR.
>It is a fact.

True, but changing the line length (tuned line) can do the same thing
as a line flattener or a transmatch. It can change the SWR reading.
This is a real indication of the load the transmitter sees.

at 0 and 180 degrees
the feed point current and voltage is at maximum the current
at the end of the antenna will be zero and voltage will be minimum

at 90 and 270 degrees the feed point current and voltage is minimum
at the end of the antenna the current is zero and voltage is maximum
at that instant the current going to the end and the current coming back
is the same value and 180 degrees out of phase so you have
no induced current flow

at 0 and 180 the current going out of the feed point and coming back
i in phase so you have maximum induced current flow with that current
flow you have voltage drop and therby power used or radiated

you nead voltage and current to get power
at 90 and 270 you have high voltage but zero induced current
at 0 and 180 you have maximum current and the voltage drop
the comes with the radiatinon reseistance that is when you
get maximum radiated power

some books state that the antenna radiates electrostatic waves
and some state it radiates magnetic waves
some say it radiates both
to this day it is all theory
they have not even ben able to disprove ether
what a person thinks just depends on what school you come from

if someone states that this is the way the antenna radiates and
every other idea is wrong that just means they think it has ben

proven and noting has

(point) is light a wave or a particle

>>
i don't have a date for it but i had such a comsat and it DID have a 100 mw
switch stock. the law back then was 100 mw with an antenna less than 5 feet
long. i suspect that the switch was there for the lowest power nessessary for
close in comms.
a 100 mw walkie talkie will talk 1 mile on a 1/2 ground plane. i know, i've
tried it as an experiment.

Maybe your existing equipment is poor because your antenna is
too short. Anything you put on a 2 foot antenna will suck.

I don't care for base loaded magnet mounts, but it might be the
best choice for you because you can take it off to go in tight
places.

I don't think there are any mods for that radio. Nothing at
http://spike.forfree.at/~skinner/ or
http://www.angelfire.com/ks/cbmods/
for that radio.

Bob Edens wrote:

>From: BILL213

>Can someone tell me what this amp will put out and if its any good?

I had a Thunderbolt 101 back in the early 90's, for the buck it's one of the best amps around, extremely clean, well made and not a single problem.

Most of the time I ran 4W AM which gave me 70-75W out, SSB 12W with 125-150 out.

The amp uses two 6LQ6's which can be hard to find locally so if you purchase the amp make sure to have a pair of replacements just in case.

thank you for getting down from your high horse and sitting on your throne and
giving us those words of wisdom.
for the people who DO do the things that you say, it is too bad, isn't it.
for the rest of us who have gone beyond the 8th grade but go on to the
out-bands, talk skip inteligently, use somewhat higher power but make great
effort to keep our equipment clean, and really do use manners ie; ask for
breaks, don't step on others, keep our beams off from a targeted path to others
antennas. how can you draw such conclusions about everyone in the country who
keys a mic. on these frequencys? either you have an extreamly sensitive radio
and antenna system or you hunt butterflys with buckshot. it seems that you are
a bit narrow minded and might want to scan some more channelsbefore makeing
such broad, all-encompassing, blanket statements.
this is what drove me to the out-bands. less noise, bull, and better company.
jeff

I need to "tune down" my Uniden 2510 to accomodate the 75 watt kicker that it is currently overdriving. I was told that VR-103 is for AM and that VR-108 is for SSB. Is this true? I opened up the rig and couldn't find VR-108. Am I blind?

I was also told to tune the am down to 5 watts and SSB to 10 watt swings. Does that sound right? Any tips would be appreciated.

You said buses and coaches use those v. big alternators.

Well, after searching deja etc it came up with yet another American
based ng called:

misc.transport.urban-transit

Maybe you can find a bus or coach breakers yard (no pun intended)

and find a couple of those alternators.

I've done my bit, now it's your turn:-)

HR2510:
Modulation: VR-114
A.M. Power: VR-103
S.S.B. Power: VR-104

On A.M., have the radio DEAD-KEY 2-3 watts. With 100% modulation, you should see a "swing" of about 10-15 watts. Also, adjust the SSB for a P.E.P of about 12 watts.

I have a Mirage 2950,in very good condition,never been mobile. It comes with the Mirage Echo mic,orignal box,and manual.It has had a few mods:

1)24-30 Mhz
2)Selectivity improved by adding crystal in IF line
3)AM detector diodes replaced with Schottky barrier diodes
4)Agc improvement mod
5)Replacement of IF amp transistors with higher gain/lower noise transistors
6)8 pole 2nd If crystal filter added in place of 4 pole
7)super swing mod
8)am AF transistor replaced with better transisitor

This radio peforms quite well. No problems with it at all.

There as a lincensed ham I do have to correct you most NCT's
know that 11 used to a ham band. Why do we know because enough of the
OT's will never let us forget it and somehow blame US for losing it in
the first place. and yes we care and kinda wish the specturm came from
somewhere else because then we would not have listen to or read about
the "good old days" when it was a ham band

The shop I work at refuses to work on any illegal equipment, because of the fines and charges that could result from the working on such equipment. I don't know of a requirement to turn anyone in, but would not be surprised with all the new regulation if there was one. Since we don't work on that type of equipment it would not effect us. As far as verifying an address that is no problem, that we do everyday. If it is credit card or check the bank can do it. Ever heard of a drivers license?

i'll make that wager. i havent qsl'ed in years but i have 112 countries
confirmed direct with post marks as proof. how many do you have total? we wont
count any cards from qsl managers because there not provable but if we were my
total would be even higher. let me know. 73 tim 2-IR-082

I would like to correct you. The band was never taken away from hams. It was turned into a band that had to be shared with non hams. Hams could and still can use 11 meters, as many do. They are just limited to 4 watts if they want to go by the regulations, as some do.

Most of the ones that yell the loudest you will fine were once CBers only and then got the ham ticket. Besides most of the ones that can remember 11 meters as a ham only band will soon be gone.

I believe the ham magazines (QST, CQ, etc) attempted to stir the pot
and get hams dander up by printing some rabble-rousing articles
about "losing 11 meters" back in the 50's, but it never quite caught
on as an issue.

"We can't control you, but you must be controlled if you are
to exist; therefore, control yourselves, or cease to exist."
- A government ultimatum to Amateur Radio, 1921.

Having been licensed since 1961 I dare say I could count on both hands,
and have fingers left over, the number of times I have heard other OT
(or any other) hams mention the 11 meter band once being a ham band, or
caring that amateur radio lost it. And I still say most new hams do not
know it was once a ham band.

<*>

FCC to step up 10 meter enforcement

The FCC's Legal Adviser for Enforcement Riley Hollingsworth says hams can expect more rigorous enforcement on 10 meter issues next year. Hollingsworth told visitors to the Shelby Hamfest in North Carolina that the next area of enforcement would be the encroachment of unlicensed individuals into the 10 meter band and a crackdown on illegal RF amplifiers. His announcement drew loud applause from the Shelby crowd. Hollingsworth elaborated on the comments in a recent interview ARRL Audio News concerning this and other enforcement issues.

"There are really two areas we need to really crank up on next year. One is the incursion into 10 meters by unlicensed operators, CBers and so forth. And also the sales of illegal equipment on the Internet and at hamfests and so forth. We really need to crank up enforcement in those two areas."

Hollingsworth told the crowd that he'd spotted more illegal equipment at Shelby that he'd seen last May at the Dayton Hamvention. You may remember that at the Hamvention, FCC Field Office personnel from Detroit warned several vendors about potential violations relating to the advertising or merchandising of RF amplifiers capable of 11 meter CB radio operation.

(FCC, ARRL)

I have been a HAM and a CBer for several years and I enjoy radios in general, I would have to agree that HAM gear is cleaner thats whay I use a Yaesu FT-757 GX-II most of the time along with my Browning, but I have found that skip on the CB is crouded, and DX on the HAM bands is boring, I find triple nickels to be a good compromise.

actually 26.815 is the alternate station for the big boys on the bowl. this is where most go to local talk when the conditions are strong (not that many are into local talking). its always interesting to hear guys talk down the road with 10 or more kw's.

The illegal usage will continue.
I do not reasonabilly believe that that there is an end in sight.
Amateur operators do have self policing...yet have no legislative powers
over others.
The only thing that may be of benifit to curtail illegal use...is when
they (the illegal) becomes tired of their toys.
I do remember the days when the most powerful station was the one who
had invested in a good antenna setup.

And i remember being a child in the 60's playing with all the "exerimental" stuff my grandfather (W2EJT.....sk) had built for the government (amps that took up the whole friggin basement wall) in the 30's-50's. Don't even go to the place where you are going to tell us that HAM's were going for the best antenna setup and not for power. You got to be blowing it out yer ass if you think anyone is buying that crapola.

William Walcher <KE4SZG@webtv.net> wrote in message news:23475-38011ACB-82@newsd-263.iap.bryant.webtv.net...
The illegal usage will continue.
I do not reasonabilly believe that that there is an end in sight.
Amateur operators do have self policing...yet have no legislative powers over others.
The only thing that may be of benifit to curtail illegal use...is when they (the illegal) becomes tired of their toys.
I do remember the days when the most powerful station was the one who had invested in a good antenna setup.

I don't think it would hurt business that much. In fact our shop has a 4 week back log just doing legal work, as do most real radio shops. I'm not talking about the shops that that have warranties on the work they do that aren't enforceable. There is more than enough work for real technicians that.

1337. Free Sonar FS-23 (almost)

Newsgroup: rec.radio.cb
Date: 1999-10-10 00:00:00 UTC
From: Kevin <kpevin@mediaone.net>
Message-ID: <YhcM3.7483$1a1.364111@elnws01>
Source record: 5936

This FS-23 was given to me and I have no use for it at all. It is 100% complete and in decent shape except for a hole drilled in the side for a toggle switch that was hooked to nothing. Very dusty on the inside - been sitting in a basement for 20 years. It does not work, tubes light and sound out of the speaker but no signals with an antenna hooked up. It also hums with the vol down so I assume a cap(s) is dried out. I didnt even try to transmit or figure out whats wrong... Whoever wants it figure like 8-15.00 to ship it or you are more then welcome to pick it up in the Chicago area. Save this fine old piece of CB history from the dumpster. photos at:

http://www.interlync.com/gold1/sonar.html

There is a keydown this weekend, do it on the higher channels. I say this
because you always have these parties on a different channel every time,
most keydowns are held on the lower channels.

There is one on ebay for $32.50. Ebay sells stuff for more money
than you can get on the newsgroup. I have one. They don't seem
to be rare because I see so many for sale. Good luck on the
footwarmer.

I might be talking out of my hat here but...I seem to recall that amp used about +90 (or more) volts on the screens. If your screen grids are not grounded then I suspect they did use a hi + voltage on them and that's what is missing. You find where that voltage went and the amp will probably work.

Since it's been many years since I've even seen one of those I very well could be wrong. Good luck and I welcome anyone to refresh my memory of this amp if I am wrong.

A friend gave me an old Raytheon Ray-Tel TWR-2 CB radio this past weekend. It's in decent shape, but doesn't work (the tube filaments light up, but that's it). Since I work for Raytheon, I thought it might be fun to try to restore it to working condition, just for grins. So... does anyone have any information on that model? Owner's manual? Service manual? Sams Photofacts? Anything of interest?

you have obviously never paid any attention then. since your a big ham(or at least have that mentality) then you should know that 11 meters is one of the best bands there are for dx during the high sunspot times like now. listen on 27.555 usb in the mornings and youll hear nothing but europeans sounding like there around the corned or down the road. in the afternoons youll hear some africa and mostly south america until the evening comes and the pacific starts to roll in. its just our luck as freebanders that were smack in the middle of the two best ham bands and the propagation acts accordingly.

Today in the box I found 3 new divisions:

141SD103 St.Pierre et Miquelon
186SD101 Djibouti
283BRC/DX St.Kitts & Nevis

These 3 qsls are now in my web!!!

http://www.geocities.com/titoradio

: The info is a bit late for being "newsworthy", and you make it to read
: as if amps are forbidden on 10,....not true.
:
: Butch Magee, KF5DE

This was from last weeks NewsLine, so it is recent.

And it is illegal to manufacture a 10 metre amp. Hams may
modify an existing amp for personal usage however. But
no manufacturer will be able to get one type accepted. Ham
transceivers are allowed to be type accepted in the 10 metre
band for higher power.

: dont you guys let the authorities do their jobs by themselves
:
: True, CB amps can't be compared to drugs, murder, or even DWI.
: There are a lot more critical problems in the world, and CB is
: very low on the priority list of any enforcement agency (as
: it probably should be).

CB is now a high priority to the FCC. It is called "fixing the
broken window" type of enforcement. The theory is that if
you let a window stay broken then it will lead to other types
of crime as people see that no one cares. The mayor of
NYC uses this tactic. He goes after small street crimes
like jumping the turnstyle in the subways.

Stop the small crimes and you will no breed bigger criminals.

: But it's SAD to see a "looters mentality" prevail in what was once
: a GREAT hobby. (i.e., during the LA riots, people who looted the
: abandoned stores did no one any "objective harm". The stores
: were insured...the cops looked the other way..."everybody"
: was looting....chances of getting busted were slim, etc.)
:
: What's wrong with breaking laws -- especially when it "harms
: no one"? I can only speak for myself, and personally, I would not
: want to be the kind of person "who only obeys laws when the cops
: are watching". To me, that kind of person is untrustworthy and
: sleazy.
:
: Now some may want to label the above opinion as characteristic
: of an "RF cop mentality", but if you do, you're really missing
: the point.
:
: I don't support anyone going around "turning people in".
: Vigilantism is not the answer, and neither is ham vs cb
: trashing and bashing.

Hams have an obligation to be self policing. No other
hobby has that obligation.

: I make no claim to be morally superior, but I sincerely believe
: that a "looters mentality" contributes to a lesser quality of
: life -- for everyone. It can be argued that the politicians are
: responsible for our problems, but I don't buy that. I think we
: are each responsible our actions, how effect others, and
: how our actions ultimately affect the whole of society.

Small crimes breeds people who do bigger crimes.

The mayor of NYC went after small crime like turnstyle jumping
in the subways. Not only did they arrest a number of people on
outstanding warrents and for having illegal weapons, it decreased
crime in general. If we care enough to enforce the small laws then
we care enough to clean up the messes that breed crime. And
small crimes, that hurt no one, breeds criminals.

The "Washington" base went through 2 "phases". The early one, that did
not have the channel 9 switch, was based on the UPD-858 chassis, and was
functionally equivilent to the TRC-457 and 458. The later Washington

(with the channel 9 switch) was the later MB-8719 chassis, and was functionally equivilent to the "newer" TRC-490 (Which also had a channel 9 switch).

You're absolutely correct, and that was most likely the reason why the
"100mW switch" on the Lafayette radios didn't fly in the eyes of the
FCC. The Comstat 25 also had 25 channels, which disappeared along with
the 100 mW switch, when the "new and improved" 25a hit the market.

I remember when I ran mine in the 100 mW position, coupled to the high
gain antenna, I could talk about 5 miles or more. I could never do that
with a 100 mW walkie talkie.

The Comstat 25 never made the Sams books. You most likely have the 25A
or 25B. Neither of which had the 100 mW switch.

Those were courtesy tones. Since a repeater has a "hang time" before the
carrier drops, the tones are used to signal that one of the transmitting
parties has stopped, and that the timeout counter has reset. Courtesy
tones can also convey information. The pitch of the tone may be
different if it detects the proper PL tone for accessing the repeater.
On large repeater systems with multiple inputs, the tone duration,
amount, or pitch can signal which input the signal came through on.

The "roger beep" itself may not be illegal, PROVIDING, that it's sole purpose is to be used in weak signal work, to facilitate communications.

The problem is that the rules also state that no noise shall be used who's sole purpose is to amuse or entertain. Considering that the vast majority of people, who use roger beeps consistently, are not using them to facilitate weak signal communications, they are therefore using them for amusement and that act is illegal.

Look at it this way. A legal CB radio is not illegal. But if you use it to jam another person's QSO, then you are USING it illegally. The same applies to roger beeps. The beep isn't illegal, but how it is used, in the majority of cases, is.

Hams (especially years ago) had much more respect for the rules, and usually will not break them. There is much more leeway for creativity with antenna setups, than power. Once you reach the legal limit, thats all she wrote, (unless you advocate breaking the rules). Antennas, were much more open to creativity. The guys that managed to put more of their power into the air were the ones with big signals.

There are many hams that pride themseleves in running QRP- less than 10 watts and working the world.

There is no challenge in running power. Any idiot with a fat wallet can run power. The true challenge is to work the weak ones with low power. That is when you know your DX skills are fine tuned. Efficient antennas help out alot here as well.

I do not know many hams that run "big" power. Most run HF with just rig power (100 watts). Some opt for the killowatt, just to get over the noise on 75 meters, but many do not. I know that there are a few "big gun" contesters that I'm sure are more than a little tempted to bump up the power a bit when they're working pileups. But they're in the minority around here. Most people can't afford, or can't justify spending, the money for big amps. In the grand scheme of things 1 KW is only 10 db above 100 watts, and with a more efficient antenna, the difference is less. Also many hams do not run big power because of TVI problems with neighbors. Most hams at least TRY to keep the peace.

1st and foremost, a comprehensive understanding of radio fundamentals, theory, and applications. Without that background, you're basically poking in the dark, and doing things, but not knowing why. There are many books out, that will tell you to "Turn XYZ pot, and peak ABC coil for max power", but don't really explain WHY this happens, or the consequences. You can also fry something, and without good troubleshooting skills, you will not be able to track down and make effective repairs (Which can be embarrasing when you try to explain to someone why their new $300 radio is no longer working when all they wanted was a "peak job").

You also need good test equipment. A GOOD power meter, a scope (For that all-important modulation), and I prefer a spectrum analyzer just to see the dirt that starts coming out due to unstable mods. A set of non-conductive plastic alignment tools for making adjustments. A good regulated bench power supply that is capable of handling the "big" rigs, is also a must have.

I also prefer to have schematic diagrams for the radios that I work on, but this won't be necesary for simple peak jobs.

Unfortunately, in order to keep peak modulation from exceeding 100%, the
average level tends to run much lower than if the limiter were active
and acting like a "speech compressor".

>

And I've repaired more than enough radios where the operator ran too
much mike gain with a power mic, and without the limiter there to take
the hit, the audio chip fried. Those audio chips do not like being
almost constantly driven into squarewave distortion, and it does shorten
their useful life.

Nothing wrong with having an open mind. But preaching and promoting a service which does not significantly improve a radio's performance, adds to adjacent channel interference, has the potential to increase RFI, and can shorten the radio's life is not IMHO a good thing.

> the more appropriate thing to do.

Removing a limiter allows an excess of 100% modulation. Why is this bad? for one thing, while you may get marginally "louder", your signal has also become broader, and is spreading over adjacent channels, which interferes with other people. Unless you enjoy being self-centered and rude to other people, this should not be a condition to strive for. In addition, people with the limiters removed start to become "rough" or "fuzzy" around the edges when they have it cranked up. The reason again is that the modulation waveform is now starting to look like a square wave. Squarewaves are not conducive to clean audio. If the limiter were allowed to function, and set for 100%, you can raise your mike gain, without fear of becoming distorted. You may hear the cat fart in the next room, but when you talk, it will be clear.

I have done numerous range tests between radios that I have adjusted. One with a limiter set at 100%, and the other with no limiter and the mike gain set to not exceed 100% on MOST peaks. The radio with the limiter is perceived as louder in this setup simply because of the higher average modulation. If the "limiterless" radio was then adjusted

to a higher gain setting to match the other radios average modulation, the peak modulation sounded harsher, and the radio would be splattering adjacent channels. There is no significant increase in range either. If I can just make 20 miles with the radio with the limiter, kicking the limiter out makes no appreciable improvement on the received end. A grasser is a grasser, overmodulated or not. This is radio fact, not CB hype.

> > > This is
> > > something OLD.
> >
> > That just backs up the fact that it's not a bad thing
> > to do. If it were such a bad thing it still wouldn't
> > be so commonly done.
> >
It's common because the great majority of CBers do not understand what they are doing, or don't care, or are just plain oblivious to the wishes of other people, and are easily swayed by fast talking "seemingly" knowlegable techs out for a fast "peak and tweek" buck. When I was young, inexperienced, and "knew-it-all", I used to yank limiters left and right. Afterall, I thought, louder was better. Then I grew up, and learned a little, and actually got to own the proper test equipment. I also learned to appreciate a good, clean sounding signal, and how much easier and more enjoyable it was to listen to than an overloud, obnoixious, distorted one. The plain truth is that a great many CBers cannot be trusted with the responsibility to run a radio with no limiters, since the "more is better" instict always seems to take over and they end up overmodulated. Then when you try to tell them about it, they tell YOU that your radio must be junk, because "big bubba" in east japip, hears them just fine.

> > changing your customers when it comes to their radio's
> > performance doesn't bother you.

Legality is not the point here. It's about readibility, good manners, and radio longevity. I don't consider it a disservice when I put back the limiters and properly set them up, and then hear comments on just how good the radio now sounds. I've converted alot of people just by letting them experience the difference first hand. You don't realize it until it stares you in the face. How many times do you have to make mr "loud and proud" repeat himself because you didn't catch every word, or certain words that he seems to slur. heck he's loud enough, why can't I understand him? Then you hear him with a properly set up radio, and listen as his words just leap out distinct and clear. So tell me, who's doing the disservice?

Besides, I've made enough money repairing radios that were butchered by the "loud-and-proud" crew. Many, many blown audio chips and final transistors. Funny, the radios seem to last once I set them up properly.

And it bothers me to see people adding to the general noise level that is, what has become of CB radio.

ATTENTION CB SHOPS!

Hi, My name is Bob Worthington. I am an account rep for LESCO Distributing. We are a wholesale distributor that specializes in CB radios and accessories, as well as other mobile electronics and home electronics. We have four warehouses, one in Dallas, (where I am) one

in
Granger, Indiana, and two in Florida, Miami and Orange City, giving me the
ability to ship from whichever warehouse is best based on product availability and shipping time. We have over 10 million
dollars in inventory and have been in business for 15 years. Some of our
product lines include Galaxy, Connex, Superstar, Northstar, Cherokee,

Cobra, Uniden, Wilson, Solarcon, Hustler, Turner Road King, Astatic, Francis, Firestik, Workman, Bandit, Vanco, Valor, Midland, and Everhardt.
We sell wholesale only, so I require a copy of your Tax Certificate and a
signed resale form to set up your account. Our prices will surprise you,
especially if you have been buying form some of those so-called "distributors" on the net. I have been in the CB business a long time, so I
know my stuff. If you want to start buying right, call me. My job is helping you make money. Call 1-800-527-2939, 8:30am to 5:00 pm Mon thru
Fri. ask for Bob. Our website is www.lescodistributing.com. We have an on-line price list you can access once you set up an account. Thanks!

I do not see a problem with this. I at one time was one of the one running around with an amp for 11 meters. I think if we as ham operaters pushed amateur radio a little more and let people know they dont have to take the code test then maybe there would not be that big of problem. But on the flip side it is to easy to buy a cheap CB radio and amp verses buying a VHF/UHF radio. I dont think there will ever be a good answer though.

Your all kinda right - lightening does take many paths. (usually the shortest, straightest path to ground). Its too powerful to complete a turn in a nice orderly fashion, some current will, but not much. The worst lightening is the positively charged, that's the stuff that starts fires, toasts your equipment, etc. Most of the lightening you see is nothing more than static cling. Its all negative and positively charged ions interacting alot like people do (some you like - some rub you the wrong way). Electric theory is interesting, some argue that electricity travels from + to -. but in a flash light (for example) it travels from - to +. Both are true.

Carp,

ALL Amateur Radio transmitters, receivers and transceivers
that are sold commercially MUST be FCC Type accepted. Surly
you've seen pre-release advertisements for new rigs that
state "pending FCC Type Acceptance." (I waited six months
for my Yaesu Quatra amp "pending FCC type acceptance," I
got tired of waiting and bought an ETO amp instead.) That's
why there are no external RF amplifiers (linears) sold in
the United States that have 12 or 10 meters on them. They
can't pass FCC Type acceptance if they do. Most companies
will give you the parts or information to make them work on
12 and 10 meters if you prove you have a valid ham license.
Every one of my commercially built rigs have an FCC type
acceptance plate or sticker on them somewhere. Some are on
the back, or bottom of the rig and some are inside but all
of them have FCC type acceptance.

It is true that a ham rig doesn't have to be type accepted
for a ham to use it but for commercial sale it must be type
accepted.

Kevin, WB5RUE

Hard to respect such a person who endangers his own families welfare
and others by his illegal acts,regardless of what radio service,I would
actually be LESS forgiving if this individual was a licensed amateur and
he may well be.....some more of us should follow the gentlemans lead
who is trying to help the authorities.

>I believe the ham magazines (QST, CQ, etc) attempted to stir the pot and get hams dander up by printing some rabble-rousing articles about "losing 11 meters" back in the 50's, but it never quite caught on as an issue.<

A similar episode occured in the late 70's when a previously and ever-since unknown preson named Cooper made a suggestion that part of the Amateur 220Mhz band be given to a new "Class E" CB.

The author was ficticious as was the "threat" to 220MHz. But the FCC *HAS* recently added new Part 95 service in the 219MHz spectrum. I am not sure what the limitations on it's use or licensure will be, but it will not be a "license free" service like Class D is now.

Keep your eyes open, folks!

Steve

This one goes under the heading: TYPICAL CB MENTALITY

I heard some people arguing over the use of channel 31. One guy said he had been on the air since 1961 and had been using 31 the whole time. The other guy said the channel was hardly ever in use, so he and his friend were gonna talk for a few minutes. The first guy then proceeded to whistle, make fart noises, and play country music over the first two guys who wanted to use the channel. Even though the other guy did not want to make a call, had no one to talk to and had not been using the channel, he still thought he had the right to "hold the frequency" for his own use, because he and his buddies "always talked on 31."

If you want it to work more than 5 minutes you shouldn'tYou can get a 500 and drive it with a mod V. It works better than a 667. Or you can get a dx1600 and drive it with the mod V

eBay really talks out of both sides of their mouth as far as their prohibitions against "illegal equipment" are concerned.

They do not allow the listing of scanners which have been modified or are ABLE to be modified for cellular phone reception, even though possession and sales between individuals of these radios is completely legal. Yet, they allow linear amplifiers to be listed and sold openly in the "CB" section of their forum. Items which are most certainly illegal for both possession by and sale to unlicensed (CB) operators.

What's wrong with this picture?

in some countires where the AT group and other 11 meter groups have members it is highly illegal to use 27 megs. in iran, iraq and a few other countries it can even lead to the death penalty(they consider it spy activities). most european countries have very active radio police as well. were fortunate here in the usa to have a lazy government.

Does it really matter? After all, on Ch 2 AM, you're only gonna get locals anyway, and if there's an RFI-down, er.. keydown, it won't affect it unless it's within a couple miles anyway...

Wouldn't it make more sense to have a "CB Party" - also commonly refered to as a "net" - on SSB instead of AM?

i doubt they were talking about the cb party effecting the keydown more like the keydown effecting the cb party. if you people really want a schedule to meet other cb'ers check out the Kp net on sunday mornings. theres only gonna be 7 more so hurry.

****

Details

The Net frequency is 27.580 USB, ... (.570 or .590 with QRM).

The Net will run for 9 consecutive Sundays beginning 3 October at 12 Noon GMT, and ending on 28 November.

Purpose

The purpose of a NET is to have fun, study 11 meter propagation, and see who can follow a precise schedule. Are you a REAL Dx Man ??

General Information

The KP NET costs nothing to participate. No QSL's to send, no money to spend at the post office or on QSL cards. It is open to all callers regardless of which group you belong.

Every Sunday, there will be 2 Net locations

One in Europe, and one in the Western Hemisphere (North or South America, or West Indies). Each Net controller will be present on the frequency for 2 hours. The European controller begins at exactly 12:00 GMT, and closes the Net at 14:00 GMT. The controller in North America begins at 16:00 GMT, and closes at 18:00. The locations of the controllers will be posted on this site approximately 5 days in advance of the Net. Click the "Net Controllers" button to see who will control the next Nets.

How To Participate

It's very simple. Be present on the Net frequency at the correct time. When you hear the controller, just call him, and wait until you are confirmed. He will

return a progressive number to confirm the contact. This progressive number serves as a contact "confirmation", and is not a progressive number for sending QSL. It is for your records only. Again, there is NO QSL to send. If you don't have conditions directly to the Net controller, then try to "QSP" your call via another station that HAS CONDITIONS. QSP check-ins are permitted. If you have no conditions at all…… Hey… .That's radio.

Scoring

One point for each progressive number you receive. There are a possible 16 points for this Net period. The operator with the most points is the overall winner. The operator who has the most points for their country is the country winner (minimum of 3 points). The operator who has the most points for their continent (or area) is the area winner (minimum of 3 points).

Prizes

You can win 6 Million Dollars by playing the Florida Lottery. We would love to offer a cash prize but unfortunately, Knight Patrol is not as rich as the State of Florida. However, for this Net period, certificates of appreciation will be awarded to the winners, second place and third place participants in the following categories.
Overall winner, Area winner (North America, Europe, Pacific etc), and Country Winner. For more details, click "Current Scores" then "Last Net".

KP Net History

The KP Group was the first Group to organize International Nets on the 11 Meter Band. Our first net was conducted in 1988. In the spring of 1994, there were over 3,000 check-ins made during an 8 week net period, running 4 Nets each Sunday. (Europe, East USA, West USA, and Australia). The most check-ins received in a single Net was 199 recorded by Peter Kp 2o3. Former Net winners include Kp 6o9 Anthony, and Kp 213 Roy in Trinidad and Tobago, Kp 9o4 Marino in Florida, and a big surprise in the last Net (Fall 1997).... 30AT401 Mr. Christian from Spain.

Tips and Tricks

1. Don't miss the first few Nets. If you do, it will be very hard to catch the others. Always try to maintain a perfect score from the beginning. This way, if you Should have one day of bad conditions, you will not be too far behind.

2. Use of the Internet is allowed to locate the net, and contact friends who may have conditions to the controller when you do not. Be reminded that you must make RADIO CONTACT (directly or indirectly) with the controller to be awarded one point for your check-in. QSP check-ins ARE allowed.

best regards, Tim 2-IR-082 Texas USA

Who gets hurt when someone sells an amp for use on the 11 meter band? No one.
(Ok, so maybe you set off a car alarm or two as you drive down the road talking
with your amp on, oh well! :))

Who gets hurt when a pusher sells crack to a 12 yr old child? You're comparing
apples and oranges.

just because there all illegal doesnt make them on the same level. are you more worried about your kids getting some dope in school or somebody on the street pushing amps to them(like they would even know what a amp is). what would they say? "the first amp is on me! see if you like how it makes you feel when you key up and if you do come get the next one from me" not hardly. you guys trying to compare amp dealers or makers to other types of criminals is a joke. you know that wont fly around here.

I wish I could see more law abiding citizens like the ones on this newsgroup.

Just the other day I was walking down the street, about to cross at a crosswalk and I saw the most horrendous thing - a jaywalker! Well, I gave this jaywalker a piece of my mind. He ignored me so I ran to the nearest police station and reported him. After all, this sort of crime can't go unpunished because it is, after all, a crime. I of course have never jaywalked because I am a law abiding citizen. I'm studying real hard so I can get my driver's license too. That way I can drive across the street and I'll never have to use a crosswalk again.

dont you guys let the authorities do their jobs by themselves

True, CB amps can't be compared to drugs, murder, or even DWI.
There are a lot more critical problems in the world, and CB is
very low on the priority list of any enforcement agency (as
it probably should be).

But it's SAD to see a "looters mentality" prevail in what was once
a GREAT hobby. (i.e., during the LA riots, people who looted the
abandoned stores did no one any "objective harm". The stores
were insured...the cops looked the other way..."everybody"
was looting....chances of getting busted were slim, etc.)

What's wrong with breaking laws -- especially when it "harms
no one"? I can only speak for myself, and personally, I would not
want to be the kind of person "who only obeys laws when the cops
are watching". To me, that kind of person is untrustworthy and
sleazy.

Now some may want to label the above opinion as characteristic
of an "RF cop mentality", but if you do, you're really missing
the point.

I don't support anyone going around "turning people in".
Vigilantism is not the answer, and neither is ham vs cb
trashing and bashing.

I make no claim to be morally superior, but I sincerely believe
that a "looters mentality" contributes to a lesser quality of
life -- for everyone. It can be argued that the politicians are
responsible for our problems, but I don't buy that. I think we
are each responsible our actions, how effect others, and
how our actions ultimately affect the whole of society.

I have a RCI 2970 for sale that has super mod, processor, talk back, mic, and mobile bracket. It's in good condition.
ASKING $350

Hewlett-Packard Model 180A Mainframe Scope with Model 1801A Vertical Amp, 1820A Time Base , Manuals and a Tektronics 10 : 1 probe. Very good condition~!

ASKING $150

Davemade Model M200 broadband amp that covers 3-30 MHz is in good condition.

ASKING $225

I will cover shipping to the lower 48 States. Shipment completed upon receipt of Postal Money Order. Serious inquiries only please!

Oh joy...he's gonna mess up ANOTHER USENET NG!

>konstans@geocites.com wrote:

>There as a lincensed ham I do have to correct you most NCT's know that 11 used to a ham band. Why do we know because enough of the OT's will never let us forget it and somehow blame US for losing it in the first place. and yes we care and kinda wish the specturm came from somewhere else because then we would not have listen to or read about the "good old days" when it was a ham band<<

Mark...you try to lie and weasel your way through the Amateur NG's, and that didn't work...so NOW you are going to come here and lie to THESE people too?

Mark does his level best in other Amateur Radio related NG's to do anything to denigriate ANY other Amatuer that doesn't believe that he should be granted an immediate waiver of all Morse Code tests...And his previous "comments" on the Citizen's Radio Service are just as uncomplimentary.

A run down of Mark's "credentials"

Claims to be a "drafted" officer in the United States Army Reserve, but they won't let him "resign". This is very peculiar since Mark is openly gay/bisexual, and openly solicits sexual encounters for same on the Internet.

He originally tried to tell me (a retired Marine Corps enlisted man) that he was a "lieutenant colonel" to try and get me to stop challenging his posts on RRAP, then when confronted with the fact that DOD doesn't know him, he changed that to "just" a lieutenant, and he is serving under an AKA since he's on the lam from an abusive ex-wife.

Mark also claims that trying to master the 5WPM morse code for the slowest of HF Amateur licenses is "torture", yet he ALSO solicits "DOMME/SUBMISSIVE" encounters, with him being the submissive...guess he LIKES torture?

He COULD get a medical waiver for his alleged dyslexia and other neurological deficits, but he keeps ignoring the pleadings of a dozen others to go to a NEUROLOGIST...Mark for some reason believes his ALLERGIST should give him the waiver, but the good Doc won't do it...wonder why...?!?! (This from a person who purports to have a 246 IQ...guess that doesn't include the ability to take a hint!)

Claimed only a few months ago to have a Bachelor's in Chemical Warfare...NOW states he has a MASTER'S in "History of the Law"

That Mark would insist that the "newcomers" to Amatuer or CB radio know that 11 meters was once an amateur allocation is just another attempt by him to stir an empty pot. He just likes to hear the ladel banging inside the pot!

Sorry Mark! Caught Ya! You lie in the other NG...you lie in here!...WHEN WILL IT STOP?!?!

The Uniden Trucker is also known as the PTC-104, the only mod you are going to fine is to use an Expo expander kit A for 118 chanels, it should do 4w swinging 15w with a D-104.

<wb5rue@stic.net> wrote:

> ALL Amateur Radio transmitters, receivers and transceivers
> that are sold commercially MUST be FCC Type accepted.

I'll repeat what I said to the other mistaken fella. There is
NO FCC requirement for Type Acceptance of any commercially
sold Amateur Radio equipment. Period. Not even for amplifiers.
(That'll raise some eyebrows!)

Here's the deal --

External RF Amplifiers -- These must be *certified* (key word =
certified) in accordance with Part 97 (97.315 and 97.317).
This was largely written to shut down mfrs of 11-meter capable
amps. It is NOT type acceptance.

Everything else -- most other amateur rigs get caught up in other
non-Part-97 *certification* requirements related to Part 15
emissions due to internal processors, non-reception of cellular
phone frequencies, etc., etc. A lot of other equipment is
subject to similar certification -- your PC, your radio/alarm-clock,
your walkman, and your wifes microwave oven. Again, none of these
have anything to do with type acceptance.

Type acceptance is a wholenudder animal, and no amateur radio
equipment is subject to type acceptance.

CB equipment is subject to type acceptance (in addition to Part
15 certification).
GMRS equipment is subject to type acceptance (in addition to Part
15 certification).
FRS equipment is subject to type acceptance (in addition to Part
15 certification).

Amateur radio is NOT subject to type acceptance.

1 the bands are not yours. it is allocated to you by the itu. they giveth and they taketh away.

2 you are nobody. you have no powers and no rights to clean up anything except whats yours. and nothing is yours except the equipment you use, not the freqs you use it on.

3 i bet you would love to give all those truckers using amps a wipping. sounds like thats right up your alley.

No. The real problem is that we have raised an entire generation who has no respect for the law. The "It's okay as long as I don't get caught" mentality prevails. Just another example how we're sinking ever lower as a society.

Yeah. Isn't that nice? A licensed ham cannot purchase a high-quality AMATEUR amplifier for use on 10 meters. Why? "Because CB'ers might use them." Yet he can go to any truck stop and select from a full line of Texas Star, Palomar, etc., CB amps which work nicely on 10 meters.

What a joke!

I don't see the use in this post. If CB radio is open for use for whatever, the two guys could one... "pump their shit up" with use of GOD's gift to CB (amps), two... move to a different channel, or three... 10-21. Less confrontation, less hassles.

There will always be a local radio BOSS (more like self-proclaimed). CB or not. American ego you might say whereever you go. Same in Hawaii, same in California and same in Florida. These are the places I've been in the past year and a half and thats what goes on. I've listened on 2 meter and 440mhz around my end and the same goes on up there too. Its inevitable I guess.

My 2 pennies...

If the audio limiter circuit has been disengaged, there would be no use for a power mic on the GrantXL/Cobra 148GTL. Tech's should either find out the mic application the operator will use and modify the radio to its applicable use or advise the operator to not use a power mic for use with a wide open rig. I've seen guys walk into a CB shop, have the tech modify the radio because he wants to be LOUD, and walk out the door. No questions asked. I would ask the tech first on what should I use and then go from there. But... thats just me.

A lot of Americans just don't realize how BAD it can get in other countries. They look at the minor gun and drug problems we have and say, 'this is bad, this is hell.' They would blow their resistors if they saw what went on in the rest of the world's sewers. We must be doing something right some of the time because our problems are minor compared to most of the rest of the world. US agents operating within our borders rarely come to a house (or a village) and kill everyone inside and leave like a thief in the night.

Yep. That'd be them. The selector actually had a red letter "A" and "B"
after channel 23 to signify the channels. Lafayette's earliest HB-525
mobile rig also had the "A" and "B" switch.

> Can a power mic hurt a radio that does not have the limiter clipped?

Normally no. The limiter will keep the audio at a "safe" level. Bill
reports that he's seen a few radios where the limiter transistor has
actually been damaged by excessive mike level. I've never seen that, but
I suppose that it can happen.

If you keep the power mic set to a level that just gives you the
modulation that works, and don't go above it, you should be fine.

How about having an on line price list so we can see if its worth opening an account

I hope I did`nt brain my damage.

You self rightous amateur's make me laugh.Not only do you cross post to stir the pot but you don't have a clue.Like i have said before, if you want a nice big output amp for cb just call any ham store or manufacture you don't need a ticket.Go to the ham site www.qrz.com and its ready to rock and roll on all bands.All thanxs to are ham friends.And if you want to convert any ham radio that can be found there too.Take care and have fun.

1493. Advised mods for President Lincoln?

Newsgroup: rec.radio.cb
Date: 1999-10-11 00:00:00 UTC
From: rjchen@leland.Stanford.EDU
Message-ID: <7ttlgh$325$1@nntp.Stanford.EDU>
Source record: 5892

I think I may get a President Lincoln soon and was wondering what mods are advisable to do on this radio? or what mods should I NOT do?

Also, is the Chipswitch useful if I'm primarily going to stick to 11 meters? and 10 if I decide to get into amateur?

Last thing, what kind of RF output should I expect from a well-modded radio?

Thanks,
-RC

if its modded well they wont try to squeze every last watt out. the chipswitch is great for dx'ers and sidebanders but not if you just talk am on the same channel everyday. they do 8 watts am and 25 watts sideband all day without getting warm or stressing anything. 73 tim 2-IR-082 http://irdx.org

Enough of the "I do it better than you" bullshit. Different people take different roads and all meet in the same place. After 20 years of working on them, I've seen things people have paid to have done to a radio that served NO use what so ever and I've seen mods done where I just sat back and went......DAMN ! ! ! What this who thread will come down to is that there are as many ways to tune a radio as there are people doing it! Set the radio for the installation and what the user requests........You're not being paid for your beliefs or opinions unless asked. If you won't do the work the customer wants and do it the way he or she wants it done, then send said customer to a shop that will do it the way he would want it done in the first place rather than generating ill will toward you or the other tech. In areas where there is competition for service work I see all these users AND techs badmouthing each and the final result is they (the customers) will travel a little further down the road to yet a different shop and not have to deal with all the in-fighting between shops.

I have been listening to 2 meters since 1974, and I have never, ever,
EVER, not even once, heard anyone playing music on any frequency in
the band. My reception area covers the better part of six counties in
upstate New York.

Tru dat ..Me growing up around New Orleans and going to a school where there was only 14 whitepeople I dont really see color as a basis for anything , but out
of respect of my breathren of either side of the invisable line that I have been
granted to cross either way, you say terms litely.Though everybody is my nigga. Though my meaning has no race applied nor do blacks .Its some blacks use it to have a reason to fight . Its some whites who use it as a term to attack some people in the black culture. In all reality I am a true motherfucking G and I keep
rolling , Then again I can talk ellegant and not that way. In life there is a place
for everything. Infact As every culture knows there is a boundary we all know its there and yes there are racists from all sides .I dont condone racist actions on either side. Usually a person is racist beocuse of a few things . 1 the surroundings
he lived in , Being his/her mother or father having something done to them and telling them that other cultures are bad or they had something done to them like being beatup or there mother raped buy a certain culrute so they hold it against the whole culture. In life there are NIggers of all cultures be it white , black , hispanic etc .
Though its all ok I guess. I mean people will be people .Anyway though I would add onto Tolls message there. Maybe the candy asses of all cultures would just not gie a dam. By the way TOLL man I have quickbooks 2000 but the dam thing is messed up.Its seems to not have the right serial number. Ack thats Intuit for you..
Dumbasses.:P~~ wink

Not to pounce on you just to throw in a little humar about what my culture has done.
MY culture me being white well mostly I am part Indian , It has over the time called black people people of color .When if you punch the hell of out a white man heis all black and blue.YOu punch a black guy ant shit happening.So hell I squeeze
on your neck and you turn red.YOu squeeze on a black persons face and he is still black .So who is the real people of color.Just thought Id throw that in to make people think.:P

1515. President McKinley CB alignment

Newsgroup: rec.radio.cb
Date: 1999-10-12 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <7tvt6g$kc2$1@oak.prod.itd.earthlink.net>
Source record: 5964

A friend I got hold of a President McKinley SSB CB set and it's a mess.

I have two questions...

I want to undo the clarified mod to get the thing aligned and working. It's just too sensitive to use the way it is. I don't have schematics or service manual. I know about the resistor and diode, and I'll put them back. I want to get the thing working first, THEN go in and 'unlock' the clarifier by changing to a regulated feed, not try to make it slide 6Kz.

My friend ordered the book from Thomas Publishing, volume 2, as that was the only reference found. But it's useless. It turns out that AFTER getting the book, you find out that the tuneup for the McKinley is listed as being in Volume 1, and variable adjustments are in volume 4. It had info on how to hack the PLL with two toggle switches and on how to convert the clarifier (with no examples or descriptions on the stock condition). Totally useless for what we needed.

Question #1:
So, where does the clarifier originally hook too? Whoever did the mod did clean work unhooking it, and without ever seeing another stock unit, I have no idea where the wires go.

And I want to do a general alignment. It's so far off frequency it's ridiculous.

Question #2:
Does anyone have the alignment order and test points for the PLL?

And if anyone could scan and email me a section of the schematic with the PLL it would be GREATLY appreaciated!!

Mike

1516. uPD-858 PLL SSB CB set

Newsgroup: rec.radio.cb
Date: 1999-10-12 00:00:00 UTC

Toadster <ktm@lanset.com> wrote in message
news:3802be13.0@news.sac.bfp.net...
> Could you experts out there Please tell me:
>
> 1) Where is TR24?
Put radio on table with speaker side facing up, control nobs facing you.
Remove the cover and looking down at the radio, both R-131 and TR-24 are
in the lower right corner section of the radio. A magnifying glass
really help see those numbers.

> 2) Would simply removing it make the radio perform better?
It does make the audio louder, and with the AM carrier set right it will
"swing" better, but there is the trade off with poorer sounding audio on
sideband.

> 3) Would removing R131 and using an Astatic 636L make for a good
sounding
> radio?
This would be the best choice. Removing R-131 will give you the "swing"
you looking for and will not effect the SSB audio. I have a Cobra 148-f
with an Astatic "Road Devel" mic. I have the AM carrier (VR-10) all the
way down and have R-131 removed. Gives me about a 2 watt "dead key" and
peaks around 15 watts with a whistle or 10 - 12 watt with normal talk.
With the boot on low, I see peaks between 30 and 50 watts. I keep the
Dynamike on the radio at about the "11 oclock" position and the mic
about a quarter way up fron the "off" position.

1523. Re: 29 LTD CLASSIC MOD KIT?

Newsgroup: rec.radio.cb
Date: 1999-10-12 00:00:00 UTC
From: 10 OHM SMOKE <peak-a-boo@mindspring.com>
Message-ID: <7tvvrb$m5c$1@nntp4.atl.mindspring.net>
Source record: 5972

The talk back is usually done in one of two places in the radio, most likely it was done on the solder side of the board back by the pa jack, it will be a resistor soldered on to the board between the center conductor and board ground at the pa jack, it should be noticeable, try taking it loose and see if your talkback goes away, if so just add a switch where you have removed one side of the resistor, to the resistor and heat shrink it and go to board ground somewhere. or ground it where it was already grounded.
As far as mod kit or swing kit you can do this yourself fairly simple. In the back left hand side of the radio by the small aluminum heat sink where the final power transistor is located you will find a jumper labeled (JP36) remove this and in its place put a 220 microfarad electrolytic capacitor one leg in each hole where the jumper was, now take a resistor (75 to 150 ohm) and place it across the back side of the board to each of the legs of the capacitor you have added, a little solder and make sure it is not going to touch the case of the radio and your in business, changing resistor value will change where your deadkey will be set, also this resistor needs to be a minimum of a 1/2 watt.
Good luck

Dat 10 ohm smoke,
Sure make you choke,
Da more dat smoke,
Da more ya broke,
Damn dat 10 ohm smoke!!!!

Challenge: Point out where, in Title 47 CFR Part 97, it is mentioned
that amateur radio transceivers must meet type acceptance.

(All you will find are limits set on spectral purity. Ours is the
only radio service in which operators are entrusted to have the
technical competence in which to abide by the stated regulations;
this privilege of trust is due to the amateur's self-policing nature.
We either abide or lose our license.)

Haaaaa. Twenty meters has always been the most useful band. Twenty meters and down. Even during the bottom of the solar cycle, 20 and down work very well. Seventeen meters and up are much more subject to solar activity and MUF. There are many times that 20 is useful and 15 isn't. Twelve meters becomes iffy most of the time, and 10 meters even more so. I can look at my log book and see how MANY contacts I made between 1988 and 1993, and how FEW were made from 93 to 98. No, eleven meters was never of much use at all for any dx--at least for the amateur community.

This is exactly right. Somebody else mentioned FCC conformance, or certification. That is also correct. Some local, county, and state agencies require electrical equipment to have UL and FCC certication (where applicable) if it to be sold new through retail outlets. Manufacturers are anxious for their products to conform to these regulations. One issue involved in certification now seems to be whether the equipment is easily modifyable to receive 800 MHz cellullar or not. Amplifiers must not be easily modifyable to operate on the 11 meter band.

Hi,

If you want, you can use the Wilson Trunk Lip Mount and order the 36"
Short Load Antenna (SLA) in place of the 62" whip that comes with it.
We sell this combination quite a bit. The SLA can also be used with the
Wilson Mag Mounts as well. In other words the SLA can be used in place
of any 62" wilson antenna.

> It was the Hams prime hf dx band!<

Jack, I don't know where you are getting your info, but that's just not true.

Until then, the HF allocations were 80, 40, 20, 15, 11 and 10 meters.

20 meters was and still is the most productive HF band for most reliable communications. 15 can be just as good when the sunspots are fairly stable, but it's subject to rapid fading.

17 meters is now experiencing great popularity since it's got basically the same propagation as 20 meters, but isn't nearly as populated.

40 is a good night time band if you can either squeeze in between the SWBC stations on phone or use CW on the bottom. 30 meters, like 17 for SSB, is getting more use for CW DX as it is not nearly as crowded as 40. Also, the mandatory lower power for all classes (max 250 watts) keeps the QRM low.

There's no question that 11 could be used for DX...it's just that there wasn't as nearly as many stations on it, foreign OR domestic. And 10 meters is a great band when it's open.

But by NO stretch of the imagination was 11 meters EVER a "prime" HF allocation for Amateur Radio.

1530. Radio Shack FRS 101 Help

Newsgroup: rec.radio.cb
Date: 1999-10-12 00:00:00 UTC
From: AJ <phoenix@eticomm.net>
Message-ID: <380396f7_1@news.eticomm.net>
Source record: 5979

Can anyone help me with troubleshooting reciever problems with FRS 101s? We have about 20 of these radios that are a couple years old and about 5 of them have lost their recieve even though they transmit well. Is this a common problem?

What is the plug-in board for? Are there diagrams and/or troubleshooting guides available?

Any info would help.

No,
but the rooftop antenna installation is what first attracts anyones attention.

I get griped at by the neighbors for creating interference, the local
neighborhood association has been trying to force me into removing
the installation entirely (I was here before they were). and it seems as
though
everytime there is a problem that is radiop related, I also get that knock on
the door
asking what I am doing? etc.

There are 2 hams that live close by and theres a 25 KW am transmitter located
in
a field just east of my location (910 KFYI).

So, I don't see why I have to put up with all the bitching. I meet all FCC
requirements
here (even had the fcc come in and do an inspection to determine where the
problem was).

This is why I get any attention at all from the neighborhood, I have a very
visible setup.

He doesnt have to make his radio equipement available unless he is a licensed ham, interfering on ham freq is the key here. When people are on the radio they are creating far less havoc than if they were on the street. yes, they yell scream cuss, fight, whistle, deadkeys, play music. but this is a release of sorts for some a way to blow off some steam you might say, i know the asshle are gonna say yeah but its illegal, and so is jerking off in the closet but ya know what you still do it. The other cheek needs to be turned on occasion for the far greater effect that can happen by busting all these cbers and manufacturers, do you not think a lot of money is passed around because of the stupid cb band better think again. Peoples mortgages are being paid there property taxes are being paid and money is being circulated around from all this, call mcm,westgate, rf parts , mouser, ask them how they would like there gross profits cut because joe tune up artist is no longer in business and doesnt buy anything from them any longer. as far as CBers Keep em off the ham bands and let them play on 11 meters its like being put in a big cage and have at each other, at least you know where everyone is.

Forfeiture. Now that's a great idea. That's like giving government enforcement officials (police, DEA,
SBI, FBI, FCC, etc.) a blank check. Since forfeiture falls under civil law it's not "not guilty until proven
innocent" but "preponderance of the evidence". Many people have had items (cars, houses, money)
seized by the government who were NOT guilty yet could not afford the civil trial to get it back.
Unless you have been in a cave for the last 10 years you couldn't help but hear the many horror stories
told by honest innocent working folks who got tagged beacuse they had too much cash or a kid who sold
a narc a joint. The bad guys can afford to lose stuff to forfeiture.

I have heard Texas drug enforcement officials "shopping" for vehicles to stop. No lie. I heard and watched
them stop and detain 2 Hispanic young men who just "fit the profile" (not many Hispanic folk in Texas...hi. hi.).
They had $600 in cash and a new truck. The undercover officers had followed them from Austin and had the
local police dept. stop them and call the dogs out.

The officers then spent the next hour talking on their radios about how their boss would like a new truck, and
how the cash would make a nice addition to their training ("entertainment") fund. Well the 2 men had the
money by legit means (receipt from selling some tires and rims)), they were searched (twice) and basically
hassled just to "maybe turn something up" (direct quote). After they let the men go I continued to listen
to the officers while they headed back to Austin, "shopping" for a new SUV. They actually pulled into a
gas station and scoped out one guy who they were sure "fit the profile" (was ethnic and had a nice ride)
but they decided not to hassle him after he turned out to be a local deputy. I really wish they had called the
locals on him.

BTW, The Chief of police in this Texas town drove a nice caddy thanks to a hapless pot smuggler who
stopped in the wrong rest stop. Having that nice car available for the Chief was definitely a crime deterrent.
Wonder what he drives now...

Forfeiture. BAD IDEA. Unless you live in a police state...

****
if you really want this then the only direction i can say is to direct a

gun at
your head and use it. its crap like that messing up the band not amps.

From Super Side Bander
****

I, like a lot of technicians/shop owners out there provide a service for a lot of people. There are always things that we do that we don't agree with or would not do to our own radio equipment, but when someone asks you to do this or that you provide them with this service.
Whether it be toy installs, super mods, echo's, there is always someone that is not going to approve of it.
My point is this however, why would someone take the time to complain to me if they were not so narrow minded, if they were to fall face first on a needle, it would put out both of their eyes.

Happy CB'ing Ya'll From Texas!

Bt The Way, I still need the diagram to convert the roger beep to a fart in the DX Radios. Please email me if you can help.

Thanks

Charger

Looking for someone who has a ts430 with out of band transmit mod? I've received info from many folks but would like to hear from someone who owns one. Yeah I know its not hampropriate for this mod on this radio, so please keep your "legal" comments to yourself. It would seem that there are 2 very different mods listed to enable this radio out of band transmit and I want to hear from someone who actually owns one or has done the mod on the 430 specifically. I would like to thank all those who offered me their info on this, and if I have no luck finding someone out there with this radio or hands on for the 430 I'll probably flip a coin on the mods I've been given.

Thanks in advance.

Jeff

Beg your pardon, when you use a cb, even though you are not licensed,
you are still bound by FCC regulations and you must make your equipment
available for inspection.

OK,I would rather have him bleed on my TV (I don't own one but I am
trying to be rational).There are no known drug dealers around here and
no burglaries because we have made them a priority.
People selling and using amps think its OK and people selling and
using crack usually think thats OK.

Just a simple call to the FCC would eliminate so much of this. Come
on guys. Daves absolutely right!

>available for inspection.

everyone that transmits rf must make your equipment available for inspection

CB,HAM,FRS,GMRS,AM BRODCAST,FM BRODCAST,POLICE,FIRE,AMBULACE
ALL PART 15 DEVICES,CORDLESS PHONE,RC,WALKYTALKYS,
MICROWAVES LINKS,PAGING TRANSMITTERS,CELL PHONE
AND OTHER STUF

If you do not you may will be hit with a NAL

Why you say part 15 devices must be available for inspection
becuse ther could be someone with a old radio that is generating
noise around 150mc or so and wiping out police and ambulance coms
with in a 1 to 2 mile radieus with out that rule then she or he could go on using it

and do not say it can't happen well ther has ben a few cases in which that happened

To all those that think the FCC cares,

I have sent in 5 complaints about a local person that Dead keys and blocks a city, and now hes not dead keying hes retransmitting scanner police signals and jams the air waves more. He use 2 radios some how and when we all change channels, within a matter of a few minutes hes blocking a new one.

After some very stupid comments from the FCC I was informed by a person there that there were not enough employees any more to chase down offenders and that that 11 meter band was not a priority.

Thats why it isn't licensed any longer.

Well after that comment I sent back another note to the fcc with MY license number and now they choose to ignore the complaints. I have had all in my area send an email to the fcc to the person I was contacted by, and now all we get is retured email.

So tell me this DO YOU THINK THEY CARE !!!!!

Duane,

The Wilson Fiberglass antennas will definitely work with a mag mount, however caution should be used in the size selection of the magnet. I would not go over 2' or 3' with a five inch magnet. Any size over that should be used with at least a triple mag mount.

Tony

There really isn't any such database or anything like that. If you have a handle in mind, just listen around in your area for a little while and if you don't hear anyone using it you're probably safe. Don't be surprised or upset if you find out that some venerable old timer that passed away had that handle and the folks in your area don't like it being used out of respect. Kinda like a sports players retired numbers.

Friend,
If the FCC or any other government agency feels like entering YOUR
HOME they sure a shell will do so. They also are under no obligation
to knock first. They may very well crash the front door in. What do
you think they have those battering rams for? They sure do NOT need
your permission or anyone else to enter. Better just step back......

PS
10KW from a mobile is ridiculous. Who are you trying to bullshit?

You guys are dead wrong , I have seen firsthand and was in the vehicle at the time the FCC rolled up on a guy in Phila running 10kw out of his mobile, they knew he was transmiting since they got many calls of him creating interference from sitting in the same spot daily, but they could not see any radios mounted when they looked in, no microphones, no amplifiers, just the antenna on the suburban they asked to look inside and were turned down, knowing they didnt have any evidance of a radio they stood there with there Johnson's firmly in hand So you tell me who has to make there station available. A licensed Ham must, since when you take that test you have no choice you are now on record as a amatuer station and must make your station available. So what you are saying I must let the FCC in my house to check out my cordless phone. I don't think so.

The PC122 is a good all-around performer a probably the best SSB value you will find.
BTW: $79 is a VERY good price for that unit.

Indeed! If type acceptance were needed, then we couldn't put any of
our personal home brew transmitters or amplifiers on the air at all,
since I don't know of any hams willing to spend the time and money to
have their equipment put through type acceptance testing.

By definition, IT IS NOT type acceptance, otherwise all those transmitters you've built over the years are illegal. Right!

Of all the Bulverisms (see the C.S. Lewis collection "God in the Dock", part III, chapter 1 for an explanation) I've read online, this is one of the silliest. Exactly how did you come up with this "insight" into Hawke's motivations? Do you have a gift of telepathy you haven't told us about? Have you commissioned PIs to investigate his life? Out of all the miriad reasons why a person might be an swler, but not a ham, is there any valid reason you can give why you picked out this one?

>Your statement doesnt make sense, your not a ham ,but
>you have to put up with comments from non hams and cbers.

It made perfect sense to me. He has no transmitters, but does have a quite visable antenna system. Because of the visable antenna system, his neighbors tend to blame him for every little glitch on their TVs, radios, and phones, despite the fact that he's not operating a transmitter. This is a problem any ham should empathize with.

When are you usually on the radio? I might not be making the trip down there, boubt that though, I can usually talk where I want to.

I listen to (27.385 and 27.555 LSB) quite a bit, along with my group channel 27.405 USB quite a bit.

Do you talk to the local group here on 38lsb? 202(EW), Rebel-215, Janet, Cindy and all them? They are north of me, so if they can make it to you so can I.

Message-ID: <AUSM3.1306$b84.203408@ptah.visi.com>
Source record: 6135

My wife and I both ride motorcycles with Uniden Pro538w CBs and antennas mounted at the rear side. Transmission and reception are both good and clear at rest and around city speeds. But once we're on the freeways, it sounds like we're on different planets.

(1). Use "no groundplane" antennas from RadioShack, which are about 2.5' tall-- with SWR readings under 1.5:1 on both CBs, for all channels. These antennas supposedly don't require a groundplane. When I looked at the base of the antenna, I also found that the shielding of the coax is not grounded as usual at the mounting location. But SWRs were good.

(2). Due to poor performance at speeds, I installed "regular" antennas with shield of the coax grounded onto the motorcycles. These antennas stand about six feet, also from RShack. SWR readings on these antennas shoot off the meter on all channels (passed the 3-mark.)

** For the antennas in (2), I used the same cables which originally came with the antennas for (1)-- except, I grounded the shielding (braided) conductors. I have not tested (2) on the freeways, since SWRs are so bad.

Please advise.

Thanks,

Winn.

Wow, almost six hours and no meaningless babble from the RF crybabies!
Ken Waters <kenh2os@pacbell.net> wrote in message news:3803D47F.D3B22466@pacbell.net...
To all those that think the FCC cares,
I have sent in 5 complaints about a local person that Dead keys and blocks a city, and now hes not dead keying hes retransmitting scanner police signals and jams the air waves more. He use 2 radios some how and when we all change channels, within a matter of a few minutes hes blocking a new one.

After some very stupid comments from the FCC I was informed by a person there that there were not enough employees any more to chase down offenders and that that 11 meter band was not a priority.

Thats why it isn't licensed any longer.

Well after that comment I sent back another note to the fcc with MY license number and now they choose to ignore the complaints. I have had all in my area send an email to the fcc to the person I was contacted by, and now all we get is retured email.

So tell me this DO YOU THINK THEY CARE !!!!!

1602. CBers to be reigned in...

Newsgroup: rec.radio.cb
Date: 1999-10-13 00:00:00 UTC
From: cbradeeo@aol.com
Message-ID: <19991013094731.03783.00000365@ng-fv1.aol.com>
Source record: 6002

October 13, 1999: Today marks a new era of enforcement of FCC regulations. The Compliance and Information Bureau (CIB) formally received its funding and its Congressional mandate to ENFORCE the law. A new arm of the FCC, called simply, The Bureau is retasking many of its field engineers even as I write this. Their new job will be to monitor compliance and enforce FCC regulations in all services including the Citizens Radio Service (CB Radio). It seems the years of ABUSE by some would be "high power" CB operators, and so called "Freebanders" using non type accepted equipment, has finally goaded Congress into action. The new bill regarding local police control of CB radio is expected to pass in the House this year. With local police control and real money being funneled into CB enforcement; we will soon be hearing a quieter and more polite CB band. "Freebanding" will be a thing of the past in this country, as will noisemakers, dirty linear amplifiers, foul language, idiot beeps, and lots of the stupidity we hear every day (much of it right here on this NG). All illegal ops should take heed. Change your ways now, or pay later! For the other 75%, the thoughtful and legal ops; Keep Up the Good Work!

1603. Re: FCC to crack down on illegal 10 metre amps.

I feel I *must* step in here. In my books, an SWL is every bit as much a ham as someone with a license that says they can transmit, and that is the traditional view too - not some modern-day liberal definition.

In rec.radio.amateur.equipment 10-7 <boygonbad@aol.com> wrote:

The traditional view has always been that a ham is someone who holds an
amateur radio operators license. I have never heard of an swl'er being
referred to as a ham. And that is not ment to put the swl'er down in any
way.

Message-ID: <7u247b$p2q$1@fir.prod.itd.earthlink.net>
Source record: 6006

A little while ago, I posted a request for info on the McKinley.
Specifically, schematic or PLL allignment instructions.

I've since found that there a number of radios that might share
the same chassis, since the mod information I've been able to
find on the internet all list the same part numbers and references.

So, with that in mind, I'll make the request again, but also list
any of the units that will give me a clue to what I need.

They are:

Uniden (President) Washington
President McKinley
President P400
Cobra 140GTL
Cobra 142GTL

Again, what I would like is a schematic 'section' that shows the PLL.

What I need at least is an alignment procedure for the PLL.

And if someone can tell me what the original clarifier hookup was.

Mike

I am probably the most pro-enforcement individual you will find in this newsgroup or elsewhere. But I am strongly opposed to these proposals which will give enforcement powers to local law enforcement agencies.

Most police officers and sheriff's deputies do not possess the necessary level of knowledge to enforce laws pertaining to personal communications. How many cops on the beat, for example, can tell the difference between a CB and a UHF commercial transceiver? When a neighbor complains of interference on her TV from "that CBer over there with the antenna", how is Officer Friendly supposed to know the difference between an A-99 and a 2 meter vertical? Or, what if that same A-99 is being used on 10 meters by a licensed ham? When a routine traffic stop reveals an RCI-2950 and a Texas Star amplifier, how is the cop supposed to know if it's illegal CB gear or being used legitimately on 10?

Do you see how this could conceivably cause more problems than it solves? To those of you who say "if you're a ham, they have no authority over you and you have nothing to worry about", consider this: you're usually guilty until proven innocent when it comes to matters such as this. If you are operating legally and the police confiscate your radio equipment, it is YOU who incurs the hassle and expense of going to court in order to reclaim your property.

Hams who think this is a great idea to eradicate illegal CBers better think again. Do we really want to let this genie out of the bottle?

>What comments are those. can recall making coments whereby I accept for the purposes of disccus an unflatering remark about CB and go on for there, I guess the idea of an IF.. Then .. statement is beyond your mental horizion<

Unflattering remark? YOUR assertion was it was akin to a birth defect, Mark. I'd say that was a bit beyond "unflattering".

>Indeed it is the refuseal to accept that resignation that is the reason I used the phrase drafeted in the first as you should know by now, you have sent two harassing me on this subject<

And you have insulted anyone and everyone (except Len Anderson, who is menatally ill anyway) who was a vet. And I haven't harrassed you about anything. I have asked you to stop lying and to stop insulting and humiliating yourself and American vets.

You won't, because you get off on insulting people. You are doing it here by trying to insult the folks of RRCB's intelligence by bringing your whining and flailings to another NG where you hope being a pest is acceptable. Well, it not anymore acceptable here than it is elsewhere.

>Do mention that you threnten to kill me in the preceeding post. and that you have had explained to you that the exustance of legal aias etc is not a crime, I not on the lam I simply don't want to return to being harassed by said absive exwife, I guess I have you indeed, unless you are.. no that would be paranoid<

Yeah...right....I would risk prison to threaten the life of a twit like you.

>Gee Steve but you can't understand I want to tortured by a gorgoues Female not a code key.<

No...your ads are seeking men. Some women, but you make a point of seeking men to urinate on you...Now THAT I would travel to Illinois for. And drink a case of rot-gut beer on the way up there!

>Excuse me another Stevie distortion The Doc is willing it the ARS that is not, The ARS allows waivers of 13wpm morse not 5wpm morse<

It's NOT the "ARS" that's holding you up, blockhead...It's the FCC and your refusal to go to a physician who specializes in the correct discipline of Medicine for neurological and learning disorders.

>Never claimed a BA in Chemical warfare. I claim a Masters in History, based on my work in the History of Law. If you are going to call me lieing at least get straight what you say I am lieing about<

Yes you did. Said it was your degree that got you railroaded into this Army commission that you can't get out of.

LIE LIE LIE LIE LIE LIE ! ! ! ! ! ! ! ! ! ! ! ! ! !

>No I don't lie, You insist that you and only have right to decide how I may think or express myself and call it lieing when it fails to suit your way of thinking<

MY WAY OF THINKING is to NOT misrepresent myself to people who have the contacts and resources to prove me wrong.

You are NOT an Officer.

You do NOT have a degree in "Chemical Warfare" (there is no such thing, even in the Armed Forces acadamey's)

You do NOT have a degree in the law, history thereof or otherwise.

You were NOT drafted, nor are you being held to any kind of involuntary servitude in the Armed Forces.

And lastly, you are NOT worth the trip to Illinois, even to pee on you!
So GET A LIFE!

well that sure sounds pretty, but if i want , i shall operate my illegal equipment the way i see fit. now as far as cussing and operating out of band, tell it to the hand bud, i haven't done that in years, also why don't you go to the ham radio ng and tell them to quit using illegal power on 11 meters, seems to me a lot of people are going to be caught up in this and some of them will most certainly be hams, just a thought.....bye,.....bye,bye,bye.....

Well sorry to say, but you are being way to
general. I'm lucky if once a year I go above
27.405 or below 26.965. So your statement that
"I'm fair game" is Bullshit!!! I had my "Ticket"
once and I'll tell you, it practically was the
same as listening to channel 17 around here.
That's why I said you should enforce yourselves
before you come down to whine on the 11 meter band.

Oh by the..... Small minds, breeds narrow views.....

The government can't even control themselves. How do you expect them to do anything about this. I do see them doing something about the stations that are completely out of control with power and causing problems with the TV's, but as for a simple traffic stop and seeing the radio sitting there, I don't think a thing will happen because the cop won't have a clue what he is looking at.

Matt,

Back in the days of Norman conquerors, CB radio
was "primitive" at best. 2 channel, 100mW handhelds
were common, nobody worried about antennas. The famous
Norman Vertical Antenna that you are talking about was
recently found by archaeologists and is the only known
specimen like it. It was probably never used until
CBs became more diverse, circa 1640 A.D.

The secret to a pawn shop John is that the owners know full well that most of their customers are not mobile people and most likely don't have any options to buy the product anywhere else. Its kinda like a food market in a poor neighborhood. The owner of the market knows full well that the customer's that use food stamps aren't going to take a bus 1 mile down the road to save 30 cents on a pound of butter, therefore they can gouge the price.

Please be specific, just which hams have you heard lately whining about loosing 11 meters? I have been licensed since 1961 and could count on my two hands and have fingers left over the number of hams I ever heard say anything about 11 meters being taken away, and that would have been years ago. Hams could not care less about loosing a few kilocycles from 26.960 to 27.230 when they have 28.0 to 29.7 at 10 meters?

Not necessarily true. Given the ridiculous amount of laws on the books today, there's no way to assure a police officer will know about and/or understand the ham exemption.

Consider the similar situation of mobile scanner laws. In most states, licensed amateurs are exempt from such anti-monitoring laws. Whether the presiding officer is aware of this (and decides to accept the exemption) is anyone's guess. I personally know licensed amateurs who have had their mobile scanners CONFISCATED by overzealous and/or uninformed law enforcement personnel.

Sure, they can go to court and get their equipment back. But this requires THE INNOCENT AMATEUR to incur the expense and inconvenience of taking time off of work and possibly hiring an attorney. Not to mention being denied the rightful use of his property during the period of confiscation and possible damage to said equipment while it is being "held" by the police.

Same thing will happen here. It's not a good idea.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

1637. Re: 148gtl/Grant XL vs. Export Radios/2950

Newsgroup: rec.radio.cb
Date: 1999-10-13 00:00:00 UTC
From: Jack Thurston <fire228@cybertrails.com>
Message-ID: <3804BACB.1758@cybertrails.com>
Source record: 6037

Dwight and Lina,

I use both of these radios on a daily basis!
The receiver in the 148gtl is vastly superior
to the receiver in the 2950, so what downgrade?
The transmitter in the 2950 produces more
power than the transmitter in the 148, so who
cares? There are ways around that. I use the
2950 in a sparsely populated area where maximum
receiver selectivity is not an absolute necessity
because there is not a large amount of traffic!
The 2950 receiver front end would never "cut the
mustard" in the middle of a truck stop with 400 trucks
and god knows how many of them using the band at
any given time! This is where the receiver in the
148gtl outperforms the receiver in the 2950, or just
about any other export radio for that matter. The
fewer channels that are covered by the receiver, the
better the receivers ability to reject interference
from signals on adjacent channels. As far as the
receiver is concerned, going from the 2950 to a
148gtl will be an "upgrade" every time!

Jack

The receivers in export radios, by virtue of
the fact that they cover such a wide range of
frequencies, requires a lowering of the "Q" in the
inductors of the receiver front end to achieve
the bandwidth required and makes them a poor choice
if receiver selectivity and immunity to adjacent
channel interference is a major concern!
If the manufacturers of this equipment wanted to
make a major contribution to diminishing the
"logjam" in the 11 meter band, they would produce
a transceiver that takes advantage of 3 or 4 stages
of conversion instead of the tired "dual conversion"
front end so proliferate in all equipment that is
currently on the market, type accepted or otherwise!
This is one of the primary reasons that savvy
operators operate amateur equipment in the citizens
band service, so that they might take advantage of
state of the art receivers with "tight" receiver
front ends which provide a large measure of relief
from "bleedover" and other forms of adjacent channel

interference! Imagine having a station operating one channel away from you at a distance of a mile or so and not hearing any splatter on your frequency! Not much attention is given to this, the most important half of the transceiver, the "receiver".....

I would think Mr. "liners are illegal" would love this shit.
You are always whining about how "Linears are illegal" and free banders
should be caught and fined. WHAT A FUCKING HYPOCRITE!!!!!!!
Now that laws are being passed that could effect YOU, whether or
not you are doing anything wrong, you start whining. You come on
this newsgroup several months back PREACHING part 95. of the F.C.C.
and posting statements every time someone asked "About my linear"
or "how do I mod my 148" and your classic response "It's illegal
see part 95." or "It's against federal law to mod that, and big fines
and or jail" Now that they are going to pass laws that will screw you
too, you start this whining..... Go fuck yourself, you live
with what's been created, whether you like it or not, but stop
being such a hypocrite and whiner.
I hate dirt bags like you and your Butt brother Joe, I would
thoroughly enjoy just keep this going for a long time.....

Tim,

Funny you should mention that. I
have found that the 2510 performs
fairly well in this department! The
148gtl and the 2510 are the 2 radios
that grace my bench at the shop, for
these very reasons! I have added an
if notch bandpass tuning circuit to
the 2510's receiver and I find
that in conjunction with the noise blanker
the receiver provides excellent
performance. (This replaces the swr cal
control on the front panel and the cal
control is preset with another variable
potentiometer so that the swr function
still operates). Thus, the stock
appearance of the front panel/face is
preserved.

It is not a ham exemption. It is an exemption for ANY kind of FCC
station license. That could be a ham license, a GMRS license, a marine
radio license, etc. The type of license does not matter, the point is
that stations licensed by the FCC will not fall under the scope of
this law, only unlicensed stations.

Oh my God, I just love this stuff. You are BOTH wrong. Using 'reign' instead of 'rein' is a common error with an uncommonly used word, but 'RIEGNED' ??? Give us all a break. You know what they say?? "People who think they know it all are particularly irritating to those of us who do."

Sorry Wildcat. The word is Reign. Put riegn in your spell checker and watch in
> horror as you realize once again that you are a bonafide idiot.

Sorry Oh fool of the airwaves but the word RIEGN (pronounced reen) is a legal term, the definition of which is to have a person at ones will by virtue of a legally binding contract. I really dont expect the "Fisher Price" spell checker in your computer to be capable of advanced English.

Maybe when you grow up, Ill send you a complimentary copy of Blacks Law Dictionary, that way you can attempt to impress people at parties with your superfluous vocabulary.

John, there is no such thing as an ENFORCEABLE $20,000 fine from the FCC for refusing to provide entry into ones domicile. I dont who told you you could be fined for not letting the FCC in your house but its apparent you've bought it hook, line and sinker. The ONLY time you can be fined for such an act is when a judge has ordered entry into a house by virtue of a standing search warrant and the occupant of the house refuses to acquiese. This IS the only time a monetary fine can be LEGALLY issued. You, like many other Hams think the FCC has these broad powers that allow them to trample on ones Constitutional rights, which could be the farther from the truth. Pick up a book instead of believing what everyone else is saying.

i agree, i have had both and thou art correct oh wise
jack.......bye,....bye,bye,bye..............ps. i think the 2950 was an
abvious ploy by the manufacturer to get around the rules and sell these
radios to unlicensed individuals. and i believe that mainly because of their
wide banded tendencies and the ease with which these radios can be modified.
i think the older 2950s were better than the new ones and that goes for the
cobras as well. just my two cents worth, ice cream man out and going to the
truck to sell goodies to the neighborhood children so i will have enough
money to buy me some radio equipment.........................icm
out..........

nope the secret to pawn shop ownership is knowing full well that you have to deal with less than honorable people , at least most of the time. also good location for this type of business is necessary. you have to be close to both your potential customers and potential sellers of shall we say, 'hot merchandise'. and finally , you must be willing to bend the rules as far as they will bend and cover your ass with paper , as far as the laws of your state necessitate. all this and not having any scrupples about it as far as morality and ethics and well i think you are set.....just my two cents worth, icm , the artist formally known as pinhead, back quiet and hiding in the bushes , from those mean old gooserider keydown boys,ooooooooooooohhhhhhhhhhhh, they be buggin.....icm out.....

Exactly! The marine radio service requires type accepted equipment that
adheres to the technical requirements of Part 83.

The same would be found in the aviation, land mobile, FRS, GMRS,
citizens Band, and other commerical services. But NOT Amateur Radio.

You will never see a tag on a ham radio that says "Type accepted for
technical requirements of Part 97"

You WILL see a tag that says "FCC approved" or "Complies with FCC Part
15" or something similar.

I agree 100%. I've been saying this ever since the "local Enforcement"
idea first reared its ugly head. We've had discussions about this on the
band. One of our locals is a cop and even he agrees that most cops
wouldn't know a mike cord from a coax connector.

Most of these "bills" have language in there exempting hams, and other
licensed radio ops, and presumably flashing your license to "officer
Friendly" should be all that's necessary to get him to back down. But I
wouldn't trust it.

Give the money to the FCC and let THEM do what they do best.

Well, ya runs your stuff, and ya takes yer chances...

If some of these "power stations" are hams, then they deserve to get
busted as well. Thos who make the most noise will attract the most
attention.....

Robert,

Yes you can use the SLA 36" whip in place of the 62" whip that comes
with the Wilson 1000 Trunk Lip Mount Antenna, that is the design
intent. Lets say you are favoring us, or any other company for that
matter with the order, ask for the Wilson 1000 Trunk Lip Antenna with
the SLA whip in place of the regular 62" whip. You would just pay the
difference of the whip.(approximately $3.00)

As to your next post:

Tony

Could you do the same with a K40 mount and an"SLA"?

I would not suggest that unless you want to experiment. The Wilson SLA
was designed to replace a 62" whip
whereas the K40 whip is 57".

Tony

It's hard to believe there are so many radio users that react with hostility when it comes to giving up their ILLEGAL activities. I won't dignify them with the title CBers. These radio users hurl epithets, whine, piss, and moan. They accuse, wheedle, justify, (and even make up false legal terms). These wannabe "big guns" and "freebanders" are nothing but the equivalent of litterbugs and stop sign runners. They have shit in the sandbox. They have brought dishonor to an honorable hobby. They have caused us to come under undue legal scrutiny. They have made it difficult for us to enjoy our hobby, by causing an unknowing public to paint us all with the wide brush of disfavor. Because of these inbred degenerates, all Cbers are thought to be of their ilk. As I stated, however, it amazes me that they would so vigorously defend the indefensible! We want our illegal amps. We want our "extra" channels. We want our potty mouthed antics to go on as always. We want our dumb-assed (attention seeking) roger beeps. They are like 2 year olds, who, when caught with an entire bag of cookies, sob hysterically when Mommy takes them away! Grow up and obey the LAW, or get out of our hobby! Yes OUR hobby. You forfeit your privilege to operate when you disobey laws created by a Democratically elected government. If you don't like the law, write letters and campaign to change it...but, I'm shouting down a well again...most of you are too lazy to get jobs, forget about actually registering to vote...

The reason for this is many Hams are mad that the FCC is targeting the Amatuer Band and not the cb band so they cry about the amps and freebanders etc, when in reality many hams are CBers in hiding and are also contributing to the mess.

<<sounds more like hitler or stalin cir. 1938.
jeff>>

The world was a different place in 1921. You might be
interested to read a book called "200 meters and down".
by Clinton DeSoto.

The early "hams" had a bit in common with unlicensed
freebanders of today. They were totally unlicensed (as
the FCC did not yet exist) and unregulated, and except
for their common bond as radio hobbyists, they were
not yet organized. But with the sudden growth of
broadcasting and the resulting scramble for frequencies, the
only way "amateurs" could survive federal prosecution (and
extinction) was to band together and fight for a legitimate
share of the radio spectrum. To gain this, they agreed to
a licensing requirement and to be persoanlly accountable under a
set of rules and regulations administered by the precursor
to the FCC. One of the ways they convinced the US gvernment
not to do away with them was to prove that their "hobby" was
crucial to advancing the state of the radio art, and also would
be utilized as a valuable public service in times of disaster,
among other things. It's a fascinating story, well worth reading.

: i'll have to go with toll!!!

The Radio Amateur's Handbook is correct. I think Toll Free is talking about the ideal case, where the coax attenuation is negligible. If that is the case, then VSWR does not affect the coax loss significantly.

Amateur's used to make good use of this characteristic by running open wire feedlines - which are close to being lossless. The would use an "antenna tuner" between the transmitter and the feedline. The antenna might be such a mismatch that it caused a 10:1 VSWR on the feeline, but that did not matter.

This thread started out with someone claiming that you could change the VSWR by varying the length of coax. This is not true. What is true is that you can change the input impedance to the coax by varying the length.

: No theory behind it at all. It just signals the end of one parties
: transmission. Makes it easier to communicate. Just ask the
: astronouts....

It was used by the astronauts primarily on moon missions. The reason
for this was the LONG propogation delay time. With over one second
delay from transmission to reception - that would mean a lot of lost
time over a period of thousands of transmissions during a day.

: rhombic... then what would you classify it as?

I would classify it a "cubical quad". A rhombic has its main radiation lobe or lobes (depending on the termination) in the plane of the wire, not at right angles to it.

A rhombic will not have directors or reflectors.

Rhombics also tend to be at least 1 wavelength on a side - which would make the total loop length greater than 4 wavelengths.

The FCC has issued a form for alternative enforcement options. Since they don't have the manpower they have released the proper papers to allow bounty hunter to enforce FCC rules. Anyone can do it, and it works best in groups. The hardest part is finding the signal. From there go to the local hardware store and pick up some nice sharp compact cable cutters, and some bolt cutters. If you really think it justifies it, if this guy has done nothing at all nice, and the entire city agrees and sticks together---CUT HIS COAX AND ANTENNA. (NO FLAMES) What would you do?

Ken Waters <kenh2os@pacbell.net> wrote in message news:3803D47F.D3B22466@pacbell.net...
To all those that think the FCC cares,
I have sent in 5 complaints about a local person that Dead keys and blocks a city, and now hes not dead keying hes retransmitting scanner police signals and jams the air waves more. He use 2 radios some how and when we all change channels, within a matter of a few minutes hes blocking a new one.
After some very stupid comments from the FCC I was informed by a person there that there were not enough employees any more to chase down offenders and that that 11 meter band was not a priority.
Thats why it isn't licensed any longer.
Well after that comment I sent back another note to the fcc with MY license number and now they choose to ignore the complaints. I have had all in my area send an email to the fcc to the person I was contacted by, and now all we get is retured email.

So tell me this DO YOU THINK THEY CARE !!!!!

It doesn't gain you that much. By stacking (co-phasing) two identical antennas, you only gain 3 dB gain - at the maximum. The rejection improvement off the sides is only - 3 dB, at the best.

This generally makes little difference in perceived volume - although it will make your S-meter read higher.

1726. Antenna for GE handheld 5980

Newsgroup: rec.radio.cb
Date: 1999-10-13 00:00:00 UTC
From: bum <goldmanis@my-deja.com>
Message-ID: <7u1ako$5cu$1@nnrp1.deja.com>
Source record: 6175

hi all!

I got a few of those GE 5980 handhelds quite cheap (about $15 incl. s&h at OnSale), and the range of these units suck. We tried it out in the city and got barely 300m. Now, after reading posts in this newsgroup, I assume the main culprit is bad antenna. As I don't want to invest more in antenna than in the unit itself, the question is: can i make my own antenna that can be either attached instead of stock one, or mounted on a car roof with some cabling? I'm new to radio scene, and don't know alot about all this stuff. I believe I have to use coax cable (what kind?) to connect to the antenna, what is the wiring at the antenna end? Maybe I can even use a coax cable itself as antenna?

Thanks,
Peter

Unfortunately, VHF equipment was very expensive in the late 50s. The FCC
wanted the radios to be affordable - so had no choice but to use an HF
band segment. As 11 meters was not being used by the Hams - 10 meters
is generally better - it was the logical choice.

: alienating hams of that time from the CRS from the word go.

Bull! Hams were not using 11 meters. Why should they, when 10 meters
was better for DX - and was a larger band segment?

If Hams had been commonly using the band, the FCC would never have
reassigned it.

: Furthermore, placing the service here insured that propagation
: characteristics at 27 Mhz would guarantee the eventual problems that
: we now see on the band with respect to signals from thousands of miles
: away booming in on all 40 channels.

Agreed. For some reason, the FCC did not feel this would be a problem.
I suspect that they never thought it would become as popular as it did.

From: Hawkwynd <hawkwynd@my-deja.com>
Message-ID: <7u1m8i$do0$1@nnrp1.deja.com>
Source record: 6185

I am getting a similar problem, only it's not buzzing, but a constant 5-7lbs of radio 'noise'. I lower my RF gain on my 2510, but then I cannot hear signals that well. All signals seem to be buried by this noise. I notice that when I put the 2510 in my van and drive away from the house, the signal level of the noise decreases.

Called the Elec. co, who checked thier lines near my house to rule out bad wires - all ok there. Down the road there is a large transformer on a pole, but when I drive closer to it, the signal meter level still lowers as I move away from my home.

All computers off - all major appliances off, still getting the noise levels.

Anything I can do to 'filter' this? Could it be that my antenna is too close to the power lines (35-40 ft.)?

SWR matches out within specs. Transmitts fine, radio checks as far as 40 miles away have confirmed good Tx. Just this noise is making RX nearly impossible on weaker signals.

HELP!

Thanks in advance

I have a Uniden 2510, which since I moved to my new home, I notice I get alot of static noise to the tune of about 7lbs on some days. I lower the RF gain, but lose faint signals then. Antenna is an Antron 99, and the SWR match is perfect (nearly).

What can I do to reduce this noise level? Moving the antenna is an option, as it is about 30 feet from some power lines that I think could be the problem. Called the electric co, but they report nothing foul with the lines.

Still, I'm getting this interference, and would like to resolve this.

Thanks

Are you sure it is your house? If you live in a residential neighborhood, it might be a neighbor's house, but pull the main breaker on the house and see if the noise goes away. if it does, you know the problem IS in your house. Start turning breakers back on one at a time until the noise returns, and then check that circuit for the trouble maker. Beware of things like door bell transformers.

> It is still a fact.

No, that is NOT "type Acceptance", that is "Part 15 compliance". You are still confusing 2 sets of completely different requirements.

Part 15 compliance among other things, makes sure that an electronic device does not emit an out of band signal strong enough to interfere with users of other services, as well as sets standards for spectral purity.

Type acceptance is an ADDITIONAL set of requirements that are specific to the radio service that the equipment is to be used on. In the case of CB radio, things like 40 channels, modulation control, power output etc. This is specific to the CB service. In order to be type accepted for CB, you can't, for example, have a radio with VFO frequency control, it has to be channelized and PLL controlled.

None of this applies to the Amatuer radio service. Hams are allowed to use VFO's because the HAM is responsible to know where the band edges are. The ham is allowed to adjust his power because he is supposed to know the limits and is responsible enough to adhere to the rules.

It is this technical competance, that allows the ARS to not require type accepted equipment.

The 1-640 was a 23 channel radio. $100 is kind of steep for something
that obsolete. Nice radio in its day, but I've seen them go at hamfests
for $30.

Source record: 6202

Hi,
I have a Kenwood TS-440SAT 10M serial number, very good cosmetic and electrical condition, with VCO mods done in California. Built in antenna tuner. Covers 0.3-30 Mhz continuous TX/RX. With hand mic, power cable, owners manual, and radio. $600 + shipping

I also have a Heathkit Warrior Kilowatt linear amplifier. Uses 4x 811A tubes. Output power
is between 500 and 700 watts. Covers 10/11/15/20/40/75/80 meter bands. Also works on 12/17/30 meter bands. Can be modified for 6 meter band too. Very nice. It's heavy -- so probably needs to go by fedex or UPS. $400+ shipping.

Will sell the package for $900. I'm a non-smoker so you wont get a radio that smells like an ashtray or has nicotine stains all over it.

Email if interested.
thanks,
Joe

This is an FCC "Fortfeiture Notice" and not a court case, nor does it
demonstrate that the defendant actually paid the fine.

You are right. It isn't a court case. It isn't a court case because it didn't go to court. It didn't have to. The FCC has statutory authority to fine the operator. The operator can appeal, but what would be his appeal? The rule states that if you don't open your station to inspection, you have violated the rule and are subject to fine--period. So, what is to argue? If the guy should actually get an attorney to take it to a court to argue, he is going to lose. There is no way that he can explain away what he did. If he doesn't pay the fine, it gets sent over to the IRS and they begin to have their way with the violator by collecting a little for the rest of his life. The jerk will pay the fine, one way or another.

Look at the bottom
footnotes (No payment verification). Any government agency can fine anybody
for anything.

What an idiot!

Dave amps do not suck they are just fine. The only problem here is service and selection.

It's rough in the amp building industry. especially when you can provide the customer with a great product. If you know the laws of "supply and demand" then you know whati am talking about. But when you see a decrease in the demand for the product you yourself are producing then you need to examine where you went wrong.

No need for bickering and nitpicking over who did this and who did that who cpied this who improved that. Just concetrate on your incoming, standing and outgoing orders. Especially the orders that have already left and have been delivered. That is the most important part of the business is the service after the sale.

So keep it real.

His appeal is based on a violation of search and siezure rights. In America, niether the FCC nor Almighty God can demand their way into anyones domilcile without a warrant. How many times do I have to type this?.....You guys are arguing about one of the most basic principles of an individuals constitutional rights. Ill say it again, CONSTITUTIONAL LAW 1st, ADMINISTRATIVE LAW 2nd. Civil rights always supercede administrative statutes.....My God, take your HAM hat off for a second and think about it.

>The rule
> states that if you don't open your station to inspection, you have
violated the
> rule and are subject to fine--period.

Gary, you are not paying attention. We are not talking about being fined for refusing an inspection, we are talking about being fined for refusing an "Immediate" (on the spot) inspection. There is a huge difference between the two. The FCC clearly has the right to inspect a station however they do NOT have the right to enter anyones home to do so. The FCC inspection law as it is currently written will NOT hold water if anyone ever held their feet to the fire.....The biggest problem with this discussion is that most of you guys think that the Part 95 and Part 97 rules are the Holy Grail.

>So, what is to argue? If the guy should
> actually get an attorney to take it to a court to argue, he is going to
lose.

Lose what, his Ham license? Or be forced to pay a fine if he's a non-ham? I dont think either (as long as he's not a moron). Let me ask you something Gary, when you are fined for something do you blindly take out your checkbook and pay or do you research the validity of the fine? If a cop told you that he caught you doing 10mph over that speed limit on his radar gun, do you put all of your faith in that electronic device to substantiate your guilt?

> revocation of a license, maximum monetary forfeiture, or other Commission
> sanctions.

This is where YOU really should learn the English language. Where in this statement does it say you will ACTUALLY be fined? I am reading the word "May", as in "may be fined". Mr. Hightower, did you ever hear of a law that did not have the penalty clearly written. There is no such thing as the word "MAY" is U.S. lawbooks. A person either breaks the law and faces a predetermined minimum punishment, or there is no punishment. What is the predetermined minimum punishment here? Is it $5.00 or $460,000? In your

state, if you murder a person, is it completely up to the judge to determine the punishment for 1st degree murder or is there a minimum penalty in years? Cant you read?

If you could interpolate this Rule, which I realize how hard it must be for you, you would see that the actual penalty for breaking this rule is the foreclosing of further negotiations to resolve the fine with the FCC. It does not foreclose any right to argue your position in front of ANY legal body or panel. Like the many other Hams that have swooped into this newsgroup, you like to mentally add things between the lines of rules which are clearly written, thus allowing you all to make these far fetched assumptions.

Most ISP's would also check out the source. You might also think again before posting a fake handle on the net.....there is no such thing as anonymous with wonderful things like spamcop out there that can easily track a thread back to it's source....YOU TOO ARE A FUCKING IDIOT AND DON'T UNDERSTAND THE INTELLECT YOU ARE MESSING WITH. Gosh.....If i got biited by Mindspring that would leave only about 50 ISP's that I could sign up with.....Just keep in mind.....Even weasles like you can't hide behind your keyboard!

If thats the word you like to use Outlaw that is fine, but again shows how off the shelf some of the FCC laws really are, a law enforcement officer that goes around catching rapist,drug dealers ,mobsters,scam artist, murderers, child pornographers , pedophiles, these are the real criminals that need attention not someone talking on a cb radio with 1000 watts, I guess if you ever drive over the speed limit which I am sure you do /done I guess we'll call you a Outlaw driver

AB7RS,

Show me ONE manufacturer who quotes
line losses in coaxial feedline relative
to antenna system standing wave ratio!

You won't find any, because feedline
loss in and of itself is NOT a function
of SWR.........

Good luck....
Jack

quoted line losses are at a perfect 1:1 SWR,the loss goes up
drastically from there,especially with coax and that is one reason so
many people use ladder line.

1782. Re: Sick boomer deluxe 600 needs help

Newsgroup: rec.radio.cb
Date: 1999-10-17 00:00:00 UTC

Can I use non-matched, matched pairs, or must I use matched quads as replacement pills to fix my error? Also what will the performance be like compaired to each other? As for cars... my dead pontiac blew the trans I drove it for aslong as I could but It was not dependible and and wasn't worth fixing to much rust in and the engine needs work. my mothers tourus is on the 3rd trans and needs another, my F250 is rusting rather well also it needs a front end rebuild and a new ?computer? the fuel pumps don't turn on unless you jump the positive lead on the battery to the ECC relay socket, a friends ford probe has a bad engine he had the heads replaced now 15000 miles later the same problem. I used to be a diehard bieliver American automobiles (I am still to a point) but I havent had a lot of luck, nothing would make me happier then driving to school and work in my big 4x4 F-250 but I don't have the time or the money to fix them nor the money to pay for the gas... I drive well over 150 miles a day to work and school and for the money this was the best deal.

p.s. My dream truck is a late 40's early 50's full bodied dodge power wagon... imho you can't get more American than that.

AB7RS,

People who use ladder line usually
have a load impedance that they're
trying to match somewhere in the area
of 300 - 450, maybe even 600 ohms....

Jack

AB7RS, Tracey

I fail to see how this is going
to help the individual asking the
original question since the antenna
that he referred to is designed to
use 50 ohm coaxial cable, unless you
happen to know where we can get some
50 ohm ladder line?

The question is rhetorical.....
We are talking about coaxial
type cable here, right?

Jack

I've read most of the posts about the FCC's ability/inability to enter w/o a search warrant and the question comes to mind...Are there that many of you out there making such a pain in the ass of yourselves to the cable companies, public safety and neighbors in general that you even need to worry about this question??
In my limited past knowledge of the FCC's actions, I recall they generally bring a Marshall and/or local cops with them who most likely will be carrying a warrant to search the premises for radio gear. I also recall the warrant needs to be read carefully by the intended searchee because these warrants are sometimes not overly specific and could lead to other problems should something else be noticed.
One other thing I know comes to mind and that is the primary operator of the station needs to be there during the search unless someone in the household foolishly lets them in when the primary op isn't there. Also the Feds can only show up during normal hours...unless you happen to be operating at 3 am. This then is considered normal because the station is in use.
Personally, if I were running that much power to be noticed I would move my heavy equipment to a different room and remote control it or maybe have a second legit station setup elsewhere to show anyone that surprises you.
Of course this would be a moot point in some cases because the FCC will probably already have a good idea of how much you're

running by the time they get to your door.
I guess the only real answer to keeping the Feds off your case is (1) don't do anything illegal or (2) if you must do it illegally, don't create problems in the "hood" so you won't be noticeable.

Jerry,

First of all, I don't know what you're
using to measure swr, but make sure that you are
using the least amount of power necessary to
provide meter calibration for the swr meter and
no more.
I believe that the jo-gunn 3x3 star is a "beam"
antenna. (correct me if I am wrong here) Set the
beam "on its back", pointing straigt up into the
air in an area that is clear of all metal objects
for at least 37 feet in all directions. At 200
feet of RG213 the loss will be in the area of
approximately 1.5 db., with a good quality cable
design, but let's forget all of this for the
moment. After implementing all of the above
criteria, retake your measurements and let me
know what happens.

Jack

Well you could spray some downy liquid on your carpets and this
should reduce or eliminate the static on your body. If this doesn't
sound good than you can hit a local industrial electronics place for
some commercial carpet/tile floor anti static liquids and these will
work too.Just a bit more expensive.

I heard a story from a truck driver recently. It seems that some IDIOT was being an IDIOT on CH. 19 with big power in Cal. recently. A driver saw the danger comming & tried to warn other people of the DANGER ahead, and could NOT get through because of the MORON keying down acting like an idiot uselessly. Because someone couldn't get through, an accident happened & the driver was asked WHY he didn't warn others about it. He told the BEAR that HE DID, but the MORON on the CB covered him up so no one could hear him warn others. The Bear did understand, because he hears the MORON too. They ought to accuse him of MURDER !!!! I guess he's going to answer at the Judgment if not sooner!!!! Dave

Do any of you guys have any recommendations on a
good base antenna for a handheld CB radio?
I use a 120 to 12vDC converter so I can use
my Midland ProSport XL CB as a base unit.
Right now, I just use a large(30 in) "rubber duck"
antenna which says that it will increase range by 50%!
Unfortunately, that's not the way it works.
Thanks in advance for any help.

Thomas

Bro, you couldn't have said better. I have been inspected (Ham Station) that the CATV (Cable Co) suspected of causing problems (2 Meters and Channel 18 (HBO) are one and the same) so the Cable Folks called the FCC to do an inspection for interference I was causing (The Cable TV Co just knew I had a radio). The FCC guy came to my house with several of the Cable People and indentified himself by showing me his credentials. I knew what the game was at that point since I have had some complaints about "messing up" HBO with my radios. The Fcc Guy had me make a contact on 2 meters and ran a spectrum anlysis on my signal and asked my what power I was running (5watts) and he asked me to use my highest power setting which is 50 watts. He looked over my license, made a phone call and then told me my equipment was within legal tolerance (Something I already knew). At that time I showed the FCC Inspector the Channel 18 birdie leaking off at 145.250MHz ant which time he inspected the Cable Co and found thier cables in my "Hood" to be leaking too much signal into freespace. After traveling around with Mr. FCC and showing him the points of ingress and egress for signal leakage, he proceeded back to my house where he summoned the "Chief" Cable Guy and told him of his findings. Mr. Cable Guy acted stupid and wanted a recheck, at that point Mr. FCC told him to get his supervisor here at which time Mr. "Chief" Cable Guy balked until the Mr. FCC told him the he was going to order the system shutdown due to leakage in the Aircraft and Amateur Bands. The Owner of the Cable system was over there in about 5 minutes out of his office. Mr. Owner started to argue until Mr. FCC stated in no uncertain terms he wanted this fixed immediately. Mr. Owner balked until Mr. FCC stated he calling the Districr Engineer.
Mr. Engineer stated over the speaker phone to NAL the Cable Co for the Amount of $1,500.00 and give them 3 days to repair the problem. After the 3 days, Mr. Fcc showed up again and asked if I could hear a 145.250MHz birdie and I demonstrated what was present at that time, only a low signal. I transmitted on HF and 2 meters and was not heard on the cable system.

The cable system tried everywhichway to place the blame on me and when the FCC guy verified it was their problem, Cable was not happy since it cost them over $20,000 to put in new cable, repair fittings and ground the system.

Moral of the Story:
Try to stay legal because the cable and phone Cos. don't know anything about radios and will let someone else take the blame for their problem. You never know. I had some idea this inspection would have happened since the Cable Co thought an FCC isnpection would be to their advantage (the cable co just knew it was an "illegal" radio) to force an

inspection. Since then I have become chummy with my FCC to learn what makes them tick, what makes them happy and how to avoid problems.

LESSON LEARNED: Don't mess up in your "HOOD" because if the complaint factor reaches critical mass (lots of neighbors and an occasional politician) the FCC will be goaded into action. (Never goad 3 letter federal agencies into action, they tend to over react)

Cross-posted to: rec.radio.swap,rec.radio.scanner,rec.radio.cb,alt.radio.scanner,rec.radio.amateur.swap

Hello to all.
I'm looking for this little tunable FM transmitter (87-108 MHz)that
was made in the late 1960's by Kinematix, model number "IMP II".
It's 3 x 1-1/8 x 2-3/4 in size.
It's black and has a slide power switch on the front.
A microphone could also be plugged into the top. It was tuned
with a plastic tuning tool. This gem is in the 1967 Lafayette
Radio catalog for $39.95.
Does anyone out there have one of these at the bottom of a draw?
If so, and if it's in working order I'd like to buy it from you.
Let me know how much you want for it.
Please e-mail me direct at: mrusso@hoflink.com
THANKS, Mark N2FLF

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

The question as to determine where the problem is occurring would be answered after he grounds the station, because if it is static from the carpet he will still get a zing when he touches the rig, assuming the electrical panel is properly bonded to earth ground, as it "should" be then you can go to the ground screw of an electrical outlet to see if the static or electrical charge is coming from the rig or from you rubbing your feet on the carpet, Me personally I would try to go either to the earth with either a 6' minimum ground rod or determine whether or not the water pipes in the building are PVC or copper, you can check to see when the building was built and then check local codes to see if they allowed PVC in the building for plumbing, If the building is really old then you can safely assume that the building was plumbed in galvanized pipe, but just check with the city codes and go from there.
Good luck

Man ignore these people that offer no help, what has probably happened was the amplifier went into oscillation due to a mismatch at the antenna. this caused the amp to stay "keyed up". if you have seen major smoked than there is a lot more damaged then the transistors, there is even a good chance you might not have damaged any transistors., but very possible. My point is if you replaced the transistor this will not fix your problem, and as far as a "transistor tester" this is a crock you dont need a $400 dollar transistor checker (whatever that is) but it require some explaining to understand how to test them with a VOM, any way you have damaged more than just transistors if you have seen a lot of smoke, replacing the pills is just the tip of the iceberg. Where are you located? E-Mail me and I can help you in more detail.

Hello Randall161: No I don't want to be a a$$ hole. Your the one who posted a typical unfriendly posting to CB'ers, not me. All your posting said was enforcement subject matter, and not one word of friendly advice or welcome to the ham community, ect. And probably just like all the rest, in like a lion, and out like lamb.

We see a lot of snotty and unfriendly postings of this sort, on the rec.radio.cb newsgroup. Pity!

Do you really think the problems of the ham and CB radio services will be solved by your postings. I don't think so. Its the same thing I saw when I was a kid in school. The whiners and tattlers, they don't make statues of guys like that, now do they.

This is what you e-mailed me:

Subject: Re: Re; 10 meters
Date: Sun, 17 Oct 1999 20:15:32 -0400 (EDT)
From: randall161@webtv.net
To: jay123a@qnet.com (Jay)

I suggest you tend to your business,
I will be on as long as I please....

Its totally different to what you posted on the ng. Whats the deal? I never said anything about you not posting.

randall161@webtv.net wrote:

> So you want to be an asshole.. Go for it jay

Such a potty mouth, do you hang out on 3950?

A little thin skinned ah? Sorry for what ever makes ya all snotty and unfriendly.

Jay at jay123a@qnet.com .... In the Great Mojave Desert, just down the road ah ways from the fillin station.

Yes i have listened to my CB lately. I listen and talk on it every time i get a chance between school and work. In my area we don't have the problem you're talkin about. You can tell a HAM operator in this newsgroup cuz they insult CBers in thier posts. And then you have the people who post these FCC stories that you don't even know if any of it is true. Who else would post them and why would they? To TRY to scare CBers. But i don't see why HAMS have to come into this
newsgroup and raise hell about this. Its not like personal communications systems were made for compitition. If the HAMS don't like the over modulated, over powered CBers then they should get off the band and get back to the band they were on in the first place. I agree that the childish anitcs are getting out of control and i'm tired of it too like on channels with heavy skip.

IMO, pulling TR24 is not a waste of time. The use of a power mic is just as splattering as pulliing TR24. Now if the application is used in conjunction, you would have a very over-modulated radio. TR24 pulled completes the whole by-pass of the AMC circuitry to enhance the stock GrantXL/Cobra 148GTL mics. The audio (I hope we can all agree on this) from these stock mics (and the replacement mics too) are excellent because the mic element is between 600 and 700 ohms.

Putting a power mic to this radio is a waste of money IMO. And with the see-saw effect of more swing, less modulation, the over-modulating GrantXL/Cobra 148GTL can sound louder and clearer with a simple mod of enhancing the PEP swing to 25 watts than using a minute watt swinging over-modulated (dirty) unit with a power mic.

It can be done. I've done it and my guys are happy with their units as well.

My couple of pennies...

137

Rick

So far 50% of the replies I have gotten have been in support of My feelings.
Thank You for Seeing thru all of the crap.
I have Mostly Yaesu FT-101 equipment and accessories.
I have a Ft-101B, 101, 101E,101EE, Books, Manuals, plus most of the
Accessories
that go with Them.
Are You interested ?
What do You have to trade ?
I have a 366 Pentium now, but want to set up a second System or get a Camera

and Writeable CD.

Let Me know.

Thank you

Mike

Hey Wildcat: Perhaps YOU should get back to US when you have read AND
UNDERSTOOD it.

On the other hand, don't bother, displaying your complete ignorance of
our legal system serves to underscore the worthlessness of the trash

>Article I says that only Congress has the power to make laws. Congress
>cannot give these powers to any other body. Through the years, however,
>Congress has created various federal agencies to make regulations and put
>its policies into practice. Such agencies include the Federal Trade
>Commission, the Federal Power Commission, and the Commission on Civil
>Rights.

Fortunately, YOU do not decide what Congressional acts are
constitutional are what Congressional acts are not. That authority
rests with the courts:

> Article III
>
> The judicial branch
>
>Section 1. The judicial power of the United States, shall be vested in one
>Supreme Court, and in such inferior courts as the Congress may from time to
>time ordain and establish. The judges, both of the Supreme and inferior
>courts, shall hold their offices during good behavior, and shall, at stated
>times, receive for their services, a compensation, which shall not be
>diminished during their continuance in office.
>
>Section 2 (1). The judicial power shall extend to all cases, in law and
>equity, arising under this Constitution, the laws of the United States, and
>treaties made, or which shall be made, under their authority;--to all cases
>affecting ambassadors, other public ministers and consuls;--to all cases of
>admiralty and maritime jurisdiction;--to controversies to which the United
>States shall be a party;--to controversies between two or more states;
>[between a state and citizens of another state;] between citizens of
>different states;--between citizens of the same state claiming lands under
>grants of different states, and between a state, or the citizens thereof,
>and foreign states, [citizens or subjects].

NOTE that the above gives judicial power extending "to all cases, in
law and equity, arising under this Constitution," to the COURTS, and
NOT to outhouse lawyers such as yourself.

The Supreme Court has upheld the acts of Congress creating various
federal agencies as being constitutional in that they create a
mechanism through which Congress exercises its constitutional
authority. Your opinions to the contrary don't mean diddly squat,
because it's not up to you to decide the matter, it is up to the
Supreme Court to decide the matter...and the court has already done
just that! YOUR interpretation of the law doesn't matter...it is the
interpretation of the courts that matters.

> Powers granted to Congress
>
>The Congress shall have power:
>
>Section 8 (1): To lay and collect taxes, duties, imposts and excises, to pay
>the debts and provide for the common defense and general welfare of the
>United States; but all duties, imposts and excises shall be uniform
>throughout the United States;

NOTE that the term "general welfare of the United States" does NOT
refer to public assistance programs. In fact, no such programs existed
at the time the Constitution was written. The term "general welfare of
the United States" has an entirely different meaning here. More on
this later.

>
>Section 8 (2): To borrow money on the credit of the United States;

>
>Notes: This section, called the commerce clause, gives Congress some of its
>most important powers. The Supreme Court has interpreted commerce to mean
>not only trade but also all kinds of commercial activity. Commerce "among
>the several states" is usually called interstate commerce. The Supreme
>Court has ruled that interstate commerce includes not only transactions
>across state boundaries but also any activity that affects commerce in more
>than one state. The court has interpreted the word regulate to mean
>encourage, promote, protect, prohibit, or restrain. As a result, Congress
>can pass laws and provide funds to improve waterways, to enforce air safety
>measures, and to forbid interstate shipment of certain goods. It can
>regulate the movement of people, of trains, of stocks and bonds, and even of
>television signals. Congress has made it a federal crime to flee across
>state lines from state or local police. It also has forbidden people who
>operate interstate facilities or who serve interstate passengers to treat
>customers unfairly because of race.

Didn't you even read the stuff that you yourself posted before you
posted it? Agencies such as the Federal Trade Commission, Federal
Power Commission, and Commission on Civil Rights *are* constitutional,

because they provide the mechanism through which Congress exercises
its constitutional authority over activities that affect commerce in
more than one state - as the courts have ruled on numerous occasions.
Your reading comprehensive scores in high school must have set record
lows that are still on the books today - if you even got as far as
high school, that is.

>constitutions.

Ah, yes, the powers granted in Article I. Let's review them, shall we?

>Section 8 (1): To lay and collect taxes, duties, imposts and excises, to pay
>the debts and provide for the common defense and general welfare of the
>United States; but all duties, imposts and excises shall be uniform
>throughout the United States;

Now we get back to that clause concerning the power of Congress to
provide for the general welfare of the United States...which Section
8(18) specifically grants Congress the authority to make all laws
necessary to execute that power.

The question here, then, insofar as our discussion of the FCC is
concerned, is whether or not Congress has the power to make laws
governing the use of a natural resource (the RF spectrum) and create a
federal agency to provide the mechanism through which Congress
exercises its constitutional authority to regulate same.

The Federal courts have already decided this matter.

In short, mister outhouse lawyer, once you find yourself standing in
front of a federal judge, the court WOULD NOT EVEN PERMIT YOU TO RAISE
THE ISSUE OF CONSTITUTIONALITY OF THE REGULATIONS IN QUESTION !!!

I remind you of some other constitutional provisions previously
quoted:

>Section 8 (9): To constitute tribunals inferior to the Supreme Court;
>
>Notes: Examples of federal courts "inferior to the Supreme Court" include
>the U.S. district courts and the U.S. courts of appeals.

The Constitution grants Congress the authority to create the Federal
District Courts.

> Article III
>
> The judicial branch
>
>Section 1. The judicial power of the United States, shall be vested in one
>Supreme Court, and in such inferior courts as the Congress may from time to
>time ordain and establish. The judges, both of the Supreme and inferior
>courts, shall hold their offices during good behavior, and shall, at stated
>times, receive for their services, a compensation, which shall not be
>diminished during their continuance in office.

The Constitution vests the judicial power in the United States in
those Federal District Courts just as it does in the Supreme Court.

What you don't seem to realize, mister outhouse lawyer, is that the
legal system in this country is not predicated on what is written in
the law, but rather on how the courts INTERPRET what is written in the
law. This is what is known as CASE LAW and case law sets the
precedents by which subsequent interpretations of the law are made by
the courts. In this instance, there is already sufficient case law
that your arguments about the constitutionality of FCC's authority to
make and enforce its regulations would get you absolutely nowhere.

If you had bothered to read any of the material on the world wide web
to which I posted links a couple of days ago (which I did for the
specific purpose of allowing persons such as yourself to rise above
the state of ignorance in which you are currently mired), you would
have found at http://www.fcc.gov/cib/dunifer.html the ruling of the
U.S. District Court For The Northern District Of California in the
case of U.S. vs. Stephen Paul Dunifer in which the court cited
numerous instances of case law where courts have concluded that
defendants must have standing in order to claim an affirmative defense
requiring the litigation of issues not encompassed in the plaintiff's
case-in-chief. On that basis, the court denied Dunifer's standing to
raise an affirmative defense based on the constitutionality of FCC
licensing regulations.

See e.g. Meredith Corp. v. FCC, 809 F.2d 363, 872, 874 (D.C. Cir.
1987)(holding that FCC was required to respond to plaintiff's
constitutional arguments and remanding case to FCC to consider the
constitutionality of FCC's fairness doctrine on its face and as
applied to plaintiff); WAIT Radio v. FCC, 418 F.2d 1153, 1156 (D.C.
Cir. 1969)(remanding FCC's denial of an applicant's waiver request to
FCC to reconsider the First Amendment issue raised therein).

See National Broadcasting Co. v. United States, 319 U.S. l90, 227
(1943)("The right of free speech does not include, however, the right
to use the facilities of radio without a license. The licensing system
established by Congress in the Communications Act of 1934 was a proper
exercise of its power over commerce.);

Red Lion Broadcasting v. FCC, 395 U.S. 367, 389 (1969); See also, Action for Children's Television v. FCC, 59 F.3d 1249, 1260, 1262 (D.C. Cir. 1995), cert. denied, 516 U.S. 1072(1996)(statutory scheme authorizing the FCC to enforce forfeitures is constitutional on its face, does not lack appropriate safeguards and was not unconstitutional as applied).

The Ninth Circuit Court Of Appeals has, in at least two cases, analyzed whether defendants have standing to raise, as an affirmative defense, the unconstitutionality of the statute and regulations that form the basis of the government's case-in-chief. See United States v. Hugs, 109 F.3d 1375, 1378 (9th Cir. 1997); United States v. Thirty Eight (38) Golden Eagles, 649 F. Supp. 269, 274, 276 (D. Nev. 1986), aff'd, 829 F.2d 41

The case law cited above came from the opinion of the Federal District Court judge in the Dunifer case. Had you bothered to follow the links I posted a few days ago, one of them was a link to this specific opinion containing these specific references to case law which clearly show that you don't know what you're talking about. The FACTS clearly show that regardless of your uninformed assertions to the contrary, the courts have indeed ruled that the FCC does indeed have the authority to enact and enforce its regulations.

Now, I hope for the sake of the other people reading this NG that anyone who thinks they might at some point be affected by FCC enforcement of its regulations will take the time to find out the truth for themselves, instead of listening to slef-proclaimed experts on the law such as yourself...because it is obvious to me that you don't know half of what you ought to have known about this subject before you started shooting your mouth off about it, and anyone who accepts your highly misinformed assertions about the laws that apply to this issue is in for a very rude awakening should they ever find themselves standing in front of a federal judge and a U.S. Attorney.

Bottom line...don't attempt to interpret or apply ANY provisions of law yourself unless you are properly educated and are licensed to practice law! If you do not meet those requirements, then don't endanger yourself by listening to the likes of Wildcat - consult a REAL legal professional !

Usually for a fine ($$$) collection enforcement action because if its
after a raid then you will know the Miranda by heart. Raids are only
used to get attention of hardheads who don't get the $FINE$ message.

John, we all know that the FCC inspects radio stations, CFR 47 says so
but the constitutional arguements are going nowhere on this thread. I
have been INSPECTED and the bottom line is:

The inspection law is directory and not mandatory (Legalese for saying
that you should do it but its not criminal if you don't), however the
FCC may fine you for "Lack of Candor" should you not permit an
inspection (deal with the fine at the federal courthouse before the
federal judge at collection time).

So only a warrant can force an inspection, a fine is the stick the FCC
uses on the first go around to get cooperation. It si wise to pernmit
the inspection because Mr. FCC will bring back his federal poker playing
buddies with the desired warrant.

Yes, buy an amplifier.

There are tuning tricks that will increase the radio's
power, but the before/after difference won't be very
significant. Also, anytime you increase the output of
a device you decrease its reliability to one degree or
another.

Why argue with Bob?

The center and ground are a DC short - meaning there is NO resistance -
O Ohms.
RF doesn't "see" this short, it sees around 50 Ohms worth of radiation
resistance on 27 Mhz (something you can't measure with your Ohm meter).

So, anyway, Debby or Dave, no need to freak cause you think your
antenna is shorted out, its not (to RF).

Stay off the crack,

Bob.

Right, you're wrong. If a cop with a search warrant is at your door and you refuse, he just forces entry. If an FCC Agent *without* a warrant is at your door and you refuse, he can't force entry. He can however go back to the office and make you wish (legally) that you had let him in.

For example, if the regular cops had had a search warrant for the K1MAN house, and no one answered the door, they would simply have broken in. The FCC, when they got no answer, had to go back to the office and start a letter writing campaign...

In Arizona, the speed law (28-701A) is a reasonable and prudent law. Speed limit signs are but a guide and are not absolute. The officer must prove that your speed was not reasonable and prudent for a conviction. 20 mph over might be reasonable at 2 am when there is no traffic, and 20 under might be unreasonable in a dust storm...

Sounds good to me. Georgia has a too fast for conditions law which is
written in a similar way. I have always instructed my students to start at
15 mph over the posted limit. This allows for the plus or minus 1 mph
variance on the RADAR and also takes into account a plus or minus 5 mph on
the speedometer. Very few motorists will argue that they weren't speeding
if the officer gives this 15 mph. (school zones excluded, of course)

I don't doubt for a minute that you were cited, Rick. I have a problem with officers citing for under 6 mph over, and this is why. Typically a speedometer can be off by as much as 5 mph and still considered to be accurate. The RADAR itself has a variance of plus or minus 1 mph. Using this logic, in order to be perfectly fair, an officer should not write a ticket for less than 6 mph over. I teach my students to start at 15 mph over.

The unit I was familiar with was the Custom Signals HR-8. It was one of the first handheld units in the 70's. If it was reading several cars on the same road, it would often lock on the fastest and/or largest vehicle, and not necessarily the closest. (It had about a one mile range.) For example, if a motorcycle was 2 blocks away going 35 mph and a large truck was 4 blocks away going 50 mph, it would likely lock on the truck. If the officer was poorly trained the MC rider got a bad ticket for 50mph. At that time the officer was required to give a visual estimate as well as the radar reading in court, which was supposed to eliminate the possibility of this error. I still think some bad tickets were written though. The bottom line was that the accuracy of the radar unit was secondary to the officers training...

Subject: Blonde Goes Ice Fishing

A blonde wanted to go ice fishing.ï¿½ She'd seen many books on the subject, and finally, after getting all the necessary tools together, she made for the nearest frozen lake.

After positioning her comfy footstool, she started to make a circular cut in the ice.ï¿½ Suddenly---from the sky---a voice boomed,

"THERE ARE NO FISH UNDER THE ICE!"

Startled, the blonde moved further down the ice, poured a Thermos of cappuccino, and began to cut yet another hole.ï¿½ Again, from the heavens, the voice bellowed,

"THERE ARE NO FISH UNDER THE ICE!"

The blonde, now quite worried, moved way down to the opposite end of the ice, set up her stool, and tried again to cut her hole.ï¿½ The voice came once more, even louder:

"THERE ARE NO FISH UNDER THE ICE!"

She stopped, looked skyward, and said, "Is that you Lord?"ï¿½ The voice replied,

"NO, THIS IS THE ICE RINK MANAGER!"

He who knows not and knows not he knows not,is a fool Shun him
He who knows not and knows he knows not,is simple Teach him
He who knows and knows not he knows,is asleep Awaken him
He who knows and knows that he knows,is wise Follow him

Hey Hightower: When you get through with the 4th Amendment, work on the whole enchilada. Get back to me once you've read it.

CONSTITUTION OF THE UNITED STATES/The Constitution

Preamble

We the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

Article I

The legislative branch

Section 1. All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

Notes: The first three articles of the Constitution divide the powers of the United States government among three separate branches: (1) the legislative branch, represented by Congress; (2) the executive branch, represented by the President; and (3) the judicial branch, represented by the Supreme Court. This division, called the separation of powers, is designed to prevent any branch of the government from becoming too powerful.

Article I says that only Congress has the power to make laws. Congress cannot give these powers to any other body. Through the years, however, Congress has created various federal agencies to make regulations and put its policies into practice. Such agencies include the Federal Trade Commission, the Federal Power Commission, and the Commission on Civil Rights.

The two-house Congress was one of the most important compromises of the Constitutional Convention. The small states at the convention supported the New Jersey plan, under which each state would have had the same number of representatives. The large states at the convention wanted the Virginia plan, which provided representation based on population. As a compromise, one house was chosen according to each plan.

The House of Representatives

Section 2 (1). The House of Representatives shall be composed of members chosen every second year by the people of the several states, and the electors in each state shall have the qualifications requisite for electors of the most numerous branch of the state legislature.

Notes: Members of the House of Representatives are elected to two-year terms. If a person is eligible to vote for the "most numerous branch" of his or her state legislature, he or she is also eligible to vote for members of Congress. The "most numerous branch" is the house that has the most members. All states except Nebraska have a two-house state legislature. The question of who can vote for state legislators is entirely up to the state, subject to the restrictions of the Constitution and federal law. The 15th, 19th, 24th, and 26th amendments forbid the states to deny or restrict a citizen's right to vote because of race, sex, or failure to pay a tax; or age if the person is at least 18 years old.

Section 2 (2). No person shall be a representative who shall not have attained to the age of twenty-five years, and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state in which he shall be chosen.

Notes: Each state decides for itself the requirements for legal residence, subject to constitutional limits. Most representatives live not only in the state but also in the district from which they are chosen.

Section 2 (3). Representatives and direct taxes shall be apportioned among the several states which may be included within this Union, according to their respective numbers, [which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all other persons]. The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of ten years, in such manner as they shall by law direct. The number of representatives shall not exceed one for every thirty thousand, but each state shall have at least one representative; [and until such enumeration shall be made, the state of New Hampshire shall be entitled to choose 3, Massachusetts 8, Rhode Island and Providence Plantations 1, Connecticut 5, New York 6, New Jersey 4, Pennsylvania 8, Delaware 1, Maryland 6, Virginia 10, North Carolina 5, South Carolina 5, and Georgia 3].

Notes: The effect of this paragraph has been greatly changed, both by amendments and by new conditions. It now provides only three things: (1) the number of representatives given to each state shall be based on its population; (2) Congress must see that the people of the United States are counted every 10 years; and (3) each state gets at least one representative.

The Founding Fathers probably considered the words "and direct taxes" to apply to poll and property taxes. The 16th Amendment gives Congress the right to tax a person according to the size of his or her income, rather than to tax a person according to the population of the state in which the person happens to live.

In the reference to "three-fifths of all other persons," the "other persons" meant black slaves. Since there are no longer any slaves, this part of the paragraph no longer has any meaning.

The average House district has well over half a million people, so the requirement that there shall be no more than one representative for every

30,000 people no longer has any practical force. In 1929, Congress fixed the total number of representatives at 435.

Section 2 (4). When vacancies happen in the representation from any state, the executive authority thereof shall issue writs of election to fill such vacancies.

Notes: If a vacancy occurs in a House seat, the state governor must call a special election to fill it. However, if the next regularly scheduled election is to be held soon, the governor may allow the seat to remain empty rather than call a special election.

Section 2 (5). The House of Representatives shall choose their Speaker and other officers; and shall have the sole power of impeachment.

Notes: The House chooses an officer called the Speaker to lead meetings (see SPEAKER). The House alone has the power to bring impeachment charges against an official. The Senate tries impeachment cases. See IMPEACHMENT.

The Senate

Section 3 (1). The Senate of the United States shall be composed of two senators from each state, [chosen by the legislature thereof,] for six years; and each senator shall have one vote.

Notes: The Constitution at first provided that each state legislature should pick two senators. The 17th Amendment changed this rule by allowing the voters of each state to choose their own senators.

Section 3 (2). Immediately after they shall be assembled in consequence of the first election, they shall be divided as equally as may be into three classes. The seats of the senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year, so that one-third may be chosen every second year; [and if vacancies happen by resignation, or otherwise, during the recess of the legislature of any state, the executive thereof may make temporary appointments until the next meeting of the legislature, which shall then fill such vacancies].

Notes: Senators are elected to six-year terms. Every two years, one-third of the senators are elected and two-thirds are holdovers. This arrangement makes the Senate a continuing body, unlike the House, whose entire membership is elected every two years. The 17th Amendment changed the method of filling vacancies. The governor chooses a senator until the people elect one.

Section 3 (3). No person shall be a senator who shall not have attained to the age of thirty years, and been nine years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state for which he shall be chosen.

Notes: In 1806, Henry Clay of Kentucky was appointed to fill an unexpired term in the Senate. He was only 29, a few months younger than the minimum age, but no one challenged the appointment. In 1793, Albert Gallatin was

elected to the Senate from Pennsylvania. He was removed from office when the Senate ruled that he had not yet been a citizen for nine years.

Section 3 (4). The Vice President of the United States shall be president of the Senate, but shall have no vote, unless they be equally divided.

Notes: The Vice President serves as president of the Senate, but votes only when a tie vote occurs. The Vice President's power to break ties can be important. In 1789, for example, Vice President John Adams cast the vote that decided the President could remove Cabinet members without Senate approval.

Section 3 (5). The Senate shall choose their other officers, and also a president pro tempore, in the absence of the Vice President, or when he shall exercise the office of President of the United States.

Notes: The Senate elects an officer called the president pro tempore to lead meetings when the Vice President is absent.

Section 3 (6). The Senate shall have the sole power to try all impeachments. When sitting for that purpose, they shall be on oath or affirmation. When the President of the United States is tried, the Chief Justice shall preside: and no person shall be convicted without the concurrence of two-thirds of the members present.

Notes: The provision that the Chief Justice, rather than the Vice President, shall preside over the Senate when a President is on trial probably grows out of the fact that a conviction would make the Vice President the President. The phrase "on oath or affirmation" means that senators are placed under oath when trying impeachment cases, just as jurors are in a regular court trial.

Section 3 (7). Judgment in cases of impeachment shall not extend further than to removal from office, and disqualification to hold and enjoy any office of honor, trust or profit under the United States: but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment and punishment, according to law.

Notes: If an impeached person is found guilty, he or she can be removed from office and forbidden to hold federal office again. The Senate cannot impose any other punishment, but the person may also be tried in regular courts. The Senate has convicted only five people, all of them judges. These men were removed from office, but none was tried in another court.

Organization of Congress

Section 4 (1). The times, places and manner of holding elections for senators and representatives, shall be prescribed in each state by the legislature thereof; but the Congress may at any time by law make or alter such regulations, [except as to the places of choosing senators].

Notes: As long as state legislatures chose the senators, it would not do to let Congress fix the place of choosing. This would have amounted to giving Congress the power to tell each state where to locate its capital. The

words of the Constitution "except as to the places of choosing senators" were set aside by the 17th Amendment.

Section 4 (2). The Congress shall assemble at least once in every year, [and such meeting shall be on the first Monday in December,] unless they shall by law appoint a different day.

Notes: In Europe, monarchs could keep parliaments from meeting, sometimes for many years, simply by not calling them together. This is the reason for the requirement that the Congress of the United States must meet at least once a year. The 20th Amendment changed the date of the opening day of the session to January 3, unless Congress sets another date by law.

Section 5 (1). Each house shall be the judge of the elections, returns and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members, in such manner, and under such penalties as each house may provide.

Notes: Each house determines if its members are legally qualified and have been elected fairly. In judging the qualifications of its members, each house may consider only the age, citizenship, and residence requirements set forth in the Constitution. In acting on motions to expel a member, however, either house of Congress may consider other matters bearing on that member's fitness for office. A quorum is a group large enough to carry on business. Discussion and debate can go on whether a quorum is present or not, as long as a quorum comes in to vote.

Section 5 (2). Each house may determine the rules of its proceedings, punish its members for disorderly behavior, and, with the concurrence of two-thirds, expel a member.

Notes: Either house can expel one of its members by a two-thirds vote. Each house makes its own rules. For example, the House of Representatives puts strict time limits on debate to speed up business. It is much more difficult to end debate in the Senate. A senator may speak as long as he or she wishes. Senators use this privilege to make long speeches called filibusters to delay Senate action. The Senate, however, may vote for cloture, a motion to end debate. On most matters, cloture requires a vote of 60 senators, or three-fifths of the total Senate membership. See CLOTURE.

Section 5 (3). Each house shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may in their judgment require secrecy; and the yeas and nays of the members of either house on any question shall, at the desire of one-fifth of those present, be entered on the journal.

Notes: The House Journal and the Senate Journal are published at the end of each session of Congress. They list all the bills and resolutions considered during the session, as well as every vote. All messages from the President to Congress also are included. The journals are considered the official documents for the proceedings of Congress.

Section 5 (4). Neither house, during the session of Congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two houses shall be sitting.

Section 6 (1). The senators and representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the treasury of the United States. They shall in all cases, except treason, felony and breach of the peace, be privileged from arrest during their attendance at the session of their respective houses, and in going to and returning from the same; and for any speech or debate in either house, they shall not be questioned in any other place.

Notes: The privilege of immunity (freedom from arrest) while going to and from congressional business has little importance today. Members of Congress, like anyone else, may be arrested, tried, convicted, and sent to prison.

Congressional immunity from charges of libel and slander remains important. Libel is an untrue written statement that damages a person's reputation. Slander is a spoken statement that does so. Immunity under the speech and debate clause means that members of Congress may say whatever they wish in connection with congressional business without fear of being sued. This immunity extends to anything said by members during debate, in an official report, or while voting.

Section 6 (2). No senator or representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States, which shall have been created, or the emoluments whereof shall have been increased during such time; and no person holding any office under the United States, shall be a member of either house during his continuance in office.

Notes: These provisions keep members of Congress from creating jobs to which they can later be appointed, from raising salaries of jobs they hope to hold in the future, or from holding office in the other branches of government while they are in Congress.

Section 7 (1). All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills.

Notes: Tax bills must originate in the House. The tradition that tax laws should originate in the lower house of the legislature came from England. There, the lower house--the House of Commons--is more likely to reflect the people's wishes because the people elect its members. They do not elect the upper house, the House of Lords. In the United States, this rule has little importance because the people elect both the Senate and the House. In addition, the Senate can amend a tax bill to such an extent that it rewrites the whole measure.

Section 7 (2). Every bill which shall have passed the House of Representatives and the Senate, shall, before it become a law, be presented to the President of the United States; if he approve he shall sign it, but if not he shall return it, with his objections to that house in which it

shall have originated, who shall enter the objections at large on their journal, and proceed to reconsider it. If after such reconsideration two-thirds of that house shall agree to pass the bill, it shall be sent, together with the objections, to the other house, by which it shall likewise be reconsidered, and if approved by two-thirds of that house, it shall become a law. But in all such cases the votes of both houses shall be determined by yeas and nays, and the names of the persons voting for and against the bill shall be entered on the journal of each house respectively. If any bill shall not be returned by the President within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law, in like manner as if he had signed it, unless the Congress by their adjournment prevent its return, in which case it shall not be a law.

Notes: A bill passed by Congress goes to the President for the President's signature. If the President disapproves the bill, it must be returned to Congress with a statement of the objections within 10 days, not including Sundays. This action is called a veto. Congress can pass a law over the President's veto by a two-thirds vote of each house of those members present. The President can also let a bill become law without signing it merely by letting 10 days pass. But a bill sent to the President during the last 10 days of a session of Congress cannot become law unless it is signed. If a bill the President dislikes reaches the President near the end of a session, the bill may simply be held unsigned. This practice is known as a pocket veto.

In 1996, Congress enacted a law that by Jan. 1, 1997, would add to the veto powers established by the Constitution. This law would enable the President to veto certain parts of bills passed by Congress. These parts included some spending items and tax breaks. The power to veto individual items in bills is often called a line-item veto. Under the 1996 law, Congress would, in effect, be able to override such a veto by a two-thirds majority of the members present in each house. The 1996 law would expire after eight years unless Congress renewed it. See VETO.

Section 7 (3). Every order, resolution, or vote to which the concurrence of the Senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the President of the United States; and before the same shall take effect, shall be approved by him, or being disapproved by him, shall be repassed by two-thirds of the Senate and House of Representatives, according to the rules and limitations prescribed in the case of a bill.

Powers granted to Congress

The Congress shall have power:

Section 8 (1): To lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts and excises shall be uniform throughout the United States;

Notes: Duties are taxes on goods coming into the United States. Excises are taxes on sales, use, or production, and sometimes on business procedures or privileges. For example, corporation taxes, cigarette taxes, and amusement taxes are excises. Imposts is a general tax term that includes both duties and excises.

Section 8 (2): To borrow money on the credit of the United States;

Section 8 (3): To regulate commerce with foreign nations, and among the several states, and with the Indian tribes;

Notes: This section, called the commerce clause, gives Congress some of its most important powers. The Supreme Court has interpreted commerce to mean not only trade but also all kinds of commercial activity. Commerce "among the several states" is usually called interstate commerce. The Supreme Court has ruled that interstate commerce includes not only transactions across state boundaries but also any activity that affects commerce in more than one state. The court has interpreted the word regulate to mean encourage, promote, protect, prohibit, or restrain. As a result, Congress can pass laws and provide funds to improve waterways, to enforce air safety measures, and to forbid interstate shipment of certain goods. It can regulate the movement of people, of trains, of stocks and bonds, and even of television signals. Congress has made it a federal crime to flee across state lines from state or local police. It also has forbidden people who operate interstate facilities or who serve interstate passengers to treat customers unfairly because of race. See INTERSTATE COMMERCE.

Section 8 (4): To establish an uniform rule of naturalization, and uniform laws on the subject of bankruptcies throughout the United States;

Section 8 (5): To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures;

Notes: From this section, along with the section that allows the Congress to regulate commerce and to borrow money, Congress gets its right to charter national banks and to establish the Federal Reserve System. See FEDERAL RESERVE SYSTEM.

Section 8 (6): To provide for the punishment of counterfeiting the securities and current coin of the United States;

Notes: Securities are government bonds.

Section 8 (7): To establish post offices and post roads;

Section 8 (8): To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries;

Notes: Photographs and films may also be copyrighted under this rule (see COPYRIGHT; PATENT).

Section 8 (9): To constitute tribunals inferior to the Supreme Court;

Notes: Examples of federal courts "inferior to the Supreme Court" include the U.S. district courts and the U.S. courts of appeals.

Section 8 (10): To define and punish piracies and felonies committed on the high seas, and offenses against the law of nations;

Notes: Congress, rather than the states, has jurisdiction over crimes committed at sea.

Section 8 (11): To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water;

Notes: Only Congress can declare war. However, the President, as commander in chief, has engaged the United States in wars without a declaration by Congress. Undeclared wars include the Korean War (1950-1953), the Vietnam War (1957-1975), and the Persian Gulf War (1991). Letters of marque and reprisal are documents that authorize private vessels to attack enemy shipping.

Section 8 (12): To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years;

Section 8 (13): To provide and maintain a navy;

Section 8 (14): To make rules for the government and regulation of the land and naval forces;

Section 8 (15): To provide for calling forth the militia to execute the laws of the Union, suppress insurrections and repel invasions;

Notes: Congress has given the President power to decide when a state of invasion or insurrection (uprising) exists. At such times, the President can call out the National Guard.

Section 8 (16): To provide for organizing, arming, and disciplining, the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the states respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress;

Notes: The federal government helps the states maintain the militia, also known as the National Guard. Until 1916, the states controlled the militia entirely. That year, the National Defense Act provided for federal funding of the guard and for drafting the guard into national service under certain circumstances.

Section 8 (17): To exercise exclusive legislation in all cases whatsoever, over such district (not exceeding ten miles square) as may, by cession of particular states, and the acceptance of Congress, become the seat of the government of the United States, and to exercise like authority over all places purchased by the consent of the legislature of the state in which the same shall be for the erection of forts, magazines, arsenals, dockyards, and other needful buildings;--And

Notes: This section makes Congress the legislative body not only for the District of Columbia, but also for federal property on which forts and other federal works or buildings are located.

Section 8 (18): To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the government of the United States, or in any department or officer thereof.

Notes: This section is known as the "necessary and proper" clause or the elastic clause. It allows Congress to deal with many matters that are not specifically mentioned in the Constitution but are suggested by powers granted to Congress in Article I. As times have changed, Congress has been able to pass needed laws with few amendments to the Constitution. This flexibility helps explain why the Constitution is one of the oldest written constitutions.

Powers forbidden to Congress

Section 9 (1). The migration or importation of such persons as any of the states now existing shall think proper to admit, shall not be prohibited by the Congress prior to the year one thousand eight hundred and eight, but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person.

Notes: This paragraph refers to the slave trade. Dealers in slaves, as well as some slaveholders, wanted to make sure that Congress could not stop anyone from bringing African slaves into the country before the year 1808. That year, Congress did ban the importing of slaves into the United States.

Section 9 (2). The privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

Notes: A writ of habeas corpus is a legal order that commands people who have a person in custody to bring the person into court. They must explain in court why the person is being restrained. If their explanation is unsatisfactory, the judge can order the prisoner released. See HABEAS CORPUS.

Section 9 (3). No bill of attainder or ex post facto law shall be passed.

Notes: A bill of attainder is an act passed by a legislature to punish a person without trial. An ex post facto law is one that provides punishment for an act that was not illegal when the act was committed. See ATTAINDER; EX POST FACTO.

Section 9 (4). No capitation, [or other direct,] tax shall be laid, unless in proportion to the census or enumeration herein before directed to be taken.

Notes: A capitation is a tax that is collected equally from everyone. A capitation is also called a head tax or a poll tax. The Supreme Court held that this section of the Constitution prohibits an income tax. The 16th Amendment set aside the court's decision.

Section 9 (5). No tax or duty shall be laid on articles exported from any state.

Notes: In this sentence, exported means sent to other states or to foreign countries. The Southern States feared that the new government would tax their exports and that their economies would suffer as a result. This sentence forbids such a tax. However, Congress can prohibit shipment of certain items or regulate the conditions of their shipment.

Section 9 (6). No preference shall be given by any regulation of commerce or revenue to the ports of one state over those of another: nor shall vessels bound to, or from, one state, be obliged to enter, clear, or pay duties in another.

Notes: Congress cannot make laws concerning trade that favor one state over another. Ships going from one state to another need not pay taxes to do so.

Section 9 (7). No money shall be drawn from the treasury, but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

Notes: Government money cannot be spent without the consent of Congress. Congress must issue a financial statement from time to time. Congress authorizes money for most government programs in lump sums because too much time would be needed to authorize each item separately.

Section 9 (8). No title of nobility shall be granted by the United States: And no person holding any office of profit or trust under them, shall, without the consent of the Congress, accept of any present, emolument, office, or title, of any kind whatsoever, from any king, prince, or foreign state.

Notes: Congress cannot give anyone a title of nobility, such as countess or duke. Federal officials may not accept a gift, office, payment, or title from a foreign country without the consent of Congress.

Powers forbidden to the states

Section 10 (1). No state shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make anything but gold and silver coin a tender in payment of debts; pass any bill of attainder, ex post facto law, or law impairing the obligation of contracts, or grant any title of nobility.

Section 10 (2). No state shall, without the consent of the Congress, lay any imposts or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws: and the net produce of all duties and imposts, laid by any state on imports or exports, shall be for the use of the treasury of the United States, and all such laws shall be subject to the revision and control of the Congress.

Notes: Without the consent of Congress, a state cannot tax goods entering or leaving the state except for small fees to cover the cost of inspection. Profits from a tax on interstate commerce go to the federal government.

Section 10 (3). No state shall, without the consent of Congress, lay any duty of tonnage, keep troops, or ships of war in time of peace, enter into any agreement or compact with another state, or with a foreign power, or engage in war, unless actually invaded, or in such imminent danger as will not admit of delay.

Notes: Only the federal government has the power to make treaties and to carry out measures for national defense.

Article II

The executive branch

Section 1 (1). The executive power shall be vested in a President of the United States of America. He shall hold his office during the term of four years, and, together with the Vice President, chosen for the same term, be elected, as follows:

Section 1 (2). Each state shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of senators and representatives to which the state may be entitled in the Congress: but no senator or representative, or person holding an office of trust or profit under the United States, shall be appointed an elector.

Notes: This section establishes the Electoral College, a group of people chosen by the voters of each state to elect the President and Vice President (see ELECTORAL COLLEGE).

Section 1 (3). [The electors shall meet in their respective states, and vote by ballot for two persons, of whom one at least shall not be an inhabitant of the same state with themselves. And they shall make a list of all the persons voted for, and of the number of votes for each; which list they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the president of the Senate. The president of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted. The person having the greatest number of votes shall be the President, if such number be a majority of the whole number of electors appointed; and if there be more than one who have such majority, and have an equal number of votes, then the House of Representatives shall immediately choose by ballot one of them for President; and if no person have a majority, then from the five highest on the list the said House shall in like manner choose the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. In every case, after the choice of the President, the person having the greatest number of votes of the electors shall be the Vice President. But if there should remain two or more who have equal votes, the Senate shall choose from them by ballot the Vice President.]

Notes: The 12th Amendment changed this procedure for electing the President and Vice President.

Section 1 (4). The Congress may determine the time of choosing the electors, and the day on which they shall give their votes; which day shall be the same throughout the United States.

Section 1 (5). No person except a natural-born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the office of President; neither shall any person be eligible to that office who shall not have attained to the age of thirty-five years, and been fourteen years a resident within the United States.

Section 1 (6). In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President, and the Congress may by law provide for the case of removal, death, resignation or inability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed, or a President shall be elected.

Notes: On Aug. 9, 1974, President Richard M. Nixon resigned as chief executive and was succeeded by Vice President Gerald R. Ford. Until then, only death had ever cut short the term of a President of the United States. The 25th Amendment provides that the Vice President succeed to the presidency if the President becomes disabled, and specifies the conditions applying to that succession. See PRESIDENTIAL SUCCESSION.

Section 1 (7). The President shall, at stated times, receive for his services, a compensation, which shall neither be increased nor diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them.

Notes: The Constitution made it possible for a poor person to become President by providing a salary for that office. The President's salary cannot be raised or lowered during his or her term of office. The chief executive may not receive any other pay from the federal government or the states.

Section 1 (8). Before he enter on the execution of his office, he shall take the following oath or affirmation:--"I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will to the best of my ability, preserve, protect and defend the Constitution of the United States."

Notes: The Constitution does not say who shall administer the oath to the newly elected President. President George Washington was sworn in by Robert R. Livingston, then a state official in New York. After that, it became customary for the chief justice of the United States to administer the oath. Calvin Coolidge was sworn in by his father, a justice of the peace, at his home in Vermont. Coolidge took the oath again before Justice Adolph A. Hoehling of the Supreme Court of the District of Columbia.

Section 2 (1). The President shall be commander in chief of the Army and Navy of the United States, and of the militia of the several states, when called into the actual service of the United States; he may require the

opinion, in writing, of the principal officer in each of the executive departments, upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offenses against the United States, except in cases of impeachment.

Notes: The President's powers as commander in chief are far-reaching. But even in wartime, the President must obey the law.

Section 2 (2). He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the senators present concur; and he shall nominate, and by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law: but the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments.

Notes: The framers of the Constitution intended that in some matters the Senate should serve as an advisory body for the President.

The President can make treaties and appoint various government officials. But two-thirds of the senators present must approve before a treaty is confirmed. Also, high appointments require approval of more than half the senators present.

Section 2 (3). The President shall have power to fill up all vacancies that may happen during the recess of the Senate, by granting commissions which shall expire at the end of their next session.

Notes: This means that when the Senate is not in session, the President can make temporary appointments to offices which require Senate confirmation.

Section 3. He shall from time to time give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both houses, or either of them, and in case of disagreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

Notes: The President gives a State of the Union message to Congress each year. Presidents George Washington and John Adams delivered their messages in person. For more than 100 years after that, most Presidents sent a written message, which was read in Congress. President Woodrow Wilson delivered his State of the Union messages in person, as did President Franklin D. Roosevelt and all Presidents after Roosevelt. The President's messages often have great influence on public opinion, and thus on Congress. Famous messages to Congress include the Monroe Doctrine and President Wilson's "Fourteen Points."

During the 1800's, Presidents often called Congress into session. Today, Congress is in session most of the time. No President has ever had to adjourn a session of Congress.

The responsibility to "take care that the laws be faithfully executed" puts the President at the head of law enforcement for the national government. Every federal official, civilian or military, gets his or her authority from the President.

Section 4. The President, Vice President and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.

Article III

The judicial branch

Section 1. The judicial power of the United States, shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish. The judges, both of the Supreme and inferior courts, shall hold their offices during good behavior, and shall, at stated times, receive for their services, a compensation, which shall not be diminished during their continuance in office.

Notes: The Constitution makes every effort to keep the courts independent of both the legislature and the President. The guarantee that judges shall hold office during "good behavior" means that, unless they are impeached and convicted, they can hold office for life. This protects judges from any threat of dismissal by the President. The rule that a judge's salary may not be reduced protects the judge against pressure from Congress, which could otherwise threaten to fix the salary so low that the judge could be forced to resign. See COURT; SUPREME COURT OF THE UNITED STATES.

Section 2 (1). The judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority;--to all cases affecting ambassadors, other public ministers and consuls;--to all cases of admiralty and maritime jurisdiction;--to controversies to which the United States shall be a party;--to controversies between two or more states; [between a state and citizens of another state;] between citizens of different states;--between citizens of the same state claiming lands under grants of different states, and between a state, or the citizens thereof, and foreign states, [citizens or subjects].

Notes: The right of the federal courts to handle "cases arising under this Constitution" is the basis of the Supreme Court's right to declare laws of Congress unconstitutional. This right of "judicial review" was established by Chief Justice John Marshall's historic decision in the case of Marbury v. Madison (1803). See MARBURY V. MADISON.

The 11th Amendment to the Constitution set aside the phrase between a state and citizens of another state. A citizen of one state cannot sue another state in a federal court.

Section 2 (2). In all cases affecting ambassadors, other public ministers and consuls, and those in which a state shall be party, the Supreme Court shall have original jurisdiction. In all the other cases before mentioned, the Supreme Court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations as the Congress shall make.

Notes: The statement that the Supreme Court has original jurisdiction in cases affecting the representatives of foreign countries and in cases to which a state is one of the parties means that cases of this kind go directly to the Supreme Court. In other kinds of cases, the Supreme Court has appellate jurisdiction. This means that the cases are tried first in a lower court and may come up to the Supreme Court for review if Congress authorizes an appeal. Congress cannot take away or modify the original jurisdiction of the Supreme Court. However, it can take away the right to appeal to the Supreme Court, or it can fix the conditions one must meet to present an appeal.

Section 2 (3). The trial of all crimes, except in cases of impeachment, shall be by jury; and such trial shall be held in the state where the said crimes shall have been committed; but when not committed within any state, the trial shall be at such place or places as the Congress may by law have directed.

Section 3 (1). Treason against the United States, shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

Notes: No person can be convicted of treason against the United States unless he or she confesses in open court, or unless two witnesses testify that he or she has committed a treasonable act. Talking or thinking about committing a treasonable act is not treason. See TREASON.

Section 3 (2). The Congress shall have power to declare the punishment of treason, but no attainder of treason shall work corruption of blood, or forfeiture except during the life of the person attainted.

Notes: The phrase no attainder of treason shall work corruption of blood means that the family of a traitor does not share the guilt. Formerly, an offender's family could also be punished.

Article IV

Relation of the states to each other

Notes: Much of this article was taken word for word from the old Articles of Confederation.

Section 1. Full faith and credit shall be given in each state to the public acts, records, and judicial proceedings of every other state. And the Congress may by general laws prescribe the manner in which such acts, records and proceedings shall be proved, and the effect thereof.

Notes: This section requires the states to honor one another's laws, records, and court rulings. The rule prevents a person from avoiding justice by leaving a state.

Section 2 (1). The citizens of each state shall be entitled to all privileges and immunities of citizens in the several states.

Notes: This means that citizens traveling from state to state are entitled to all the privileges and immunities that automatically go to citizens of those states. Some privileges, such as the right to vote, do not automatically go with citizenship, but require a period of residence and perhaps other qualifications. The word citizen in this provision does not include corporations.

Section 2 (2). A person charged in any state with treason, felony, or other crime, who shall flee from justice, and be found in another state, shall on demand of the executive authority of the state from which he fled, be delivered up, to be removed to the state having jurisdiction of the crime.

Notes: If a person commits a crime in one state and flees to another, the governor of the state in which the crime was committed can demand that the fugitive be handed over. Returning an accused person is called extradition. A few governors have refused to extradite, perhaps because the crime was committed many years ago, or because they believed the accused would not get a fair trial. It is not clear how the federal government could enforce this section. See EXTRADITION.

Section 2 (3). [No person held to service or labor in one state, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.]

Notes: A "person held to service or labor" was a slave or an indentured servant (a person bound by contract to serve someone for several years). No one is now bound to servitude in the United States, so this part of the Constitution no longer has any force, being overruled by the 13th Amendment.

Federal-state relations

Section 3 (1). New states may be admitted by the Congress into this Union; but no new state shall be formed or erected within the jurisdiction of any other state; nor any state be formed by the junction of two or more states, or parts of states, without the consent of the legislatures of the states concerned as well as of the Congress.

Notes: New states cannot be formed by dividing or joining existing states without the consent of the state legislatures and Congress. During the Civil War (1861-1865), Virginia fought for the Confederacy, but people in the state's western part supported the Union. After West Virginia split from Virginia, Congress accepted the new state on the ground that Virginia had rebelled.

Section 3 (2). The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States, or of any particular state.

Section 4. The United States shall guarantee to every state in this Union a republican form of government, and shall protect each of them against invasion; and on application of the legislature, or of the executive (when the legislature cannot be convened) against domestic violence.

Notes: This section requires the federal government to make sure that every state has a "republican form of government." A republican government is one in which the people elect representatives to govern. The Supreme Court ruled that Congress, not the courts, must decide whether a state government is republican. According to the court, if Congress admits a state's senators and representatives, that action indicates that Congress considers the state's government republican.

The legislature or governor of a state can request federal aid in dealing with riots or other violence. During the Pullman strike of 1894, federal troops were sent to Illinois even though the governor said he did not want them (see PULLMAN STRIKE).

Article V

Amending the Constitution

The Congress, whenever two-thirds of both houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two-thirds of the several states, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three-fourths of the several states, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress; provided [that no amendment which may be made prior to the year one thousand eight hundred and eight shall in any manner affect the first and fourth clauses in the ninth section of the first article; and] that no state, without its consent, shall be deprived of its equal suffrage in the Senate.

Notes: Amendments may be proposed by a two-thirds vote of each house of Congress or by a national convention called by Congress at the request of two-thirds of the states. A national convention has never been called, in part because there are no established procedures for operating such a meeting and because of fear that such a convention could result in vast and possibly dangerous changes. To become part of the Constitution, amendments must be ratified (approved) by the legislatures of three-fourths of the states or by conventions in three-fourths of the states.

Notes: The framers of the Constitution purposely made it hard to put through an amendment. Congress has considered more than 9,000 amendments, but it has passed only 33 and submitted them to the states. Of these, 27 have been ratified. Only one amendment, the 21st, was ratified by state conventions.

All the others were ratified by state legislatures.

The Constitution sets no time limit during which the states must ratify a proposed amendment. Ratification of the 27th Amendment took 203 years, longer by far than that of any other amendment. The amendment was first proposed in 1789 and did not become part of the Constitution until 1992. Nevertheless, the courts have held that amendments must be ratified within a "reasonable time" and that Congress decides what is reasonable. Since the early 1900's, most amendments have included a requirement that ratification be obtained within seven years.

Article VI

National debts

Section 1 (1). All debts contracted and engagements entered into, before the adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.

Notes: This section promises that all debts and obligations made by the United States before the adoption of the Constitution will be honored.

Supremacy of the national government

Section 1 (2). This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every state shall be bound thereby, anything in the constitution or laws of any state to the contrary notwithstanding.

Notes: This section, known as the supremacy clause, has been called the linchpin of the Constitution--that is, the part that keeps the entire structure from falling apart. It means simply that when state laws conflict with national laws, the national laws are superior. It also means that, to be valid, a national law must follow the Constitution.

Section 1 (3). The senators and representatives before mentioned, and the members of the several state legislatures, and all executive and judicial officers, both of the United States and of the several states, shall be bound by oath or affirmation, to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

Notes: This section requires both federal and state officials to give supreme allegiance to the Constitution of the United States rather than to any state constitution. The section also forbids any religious test for holding federal office. The 14th Amendment applies the same rule to state and local governments.

Article VII

Ratifying the Constitution

The ratification of the conventions of nine states, shall be sufficient for the establishment of this Constitution between the states so ratifying the same.

Done in convention by the unanimous consent of the states present the seventeenth day of September in the year of our Lord one thousand seven hundred and eighty-seven and of the independence of the United States of America the twelfth. In witness whereof we have hereunto subscribed our names,

George Washington--President and deputy from Virginia

Delaware: George Read; Gunning Bedford, Jr.; John Dickinson; Richard Bassett; Jacob Broom.

Maryland: James McHenry; Daniel of St. Thomas Jenifer; Daniel Carroll.

Virginia: John Blair; James Madison, Jr.

North Carolina: William Blount; Richard Dobbs Spaight; Hugh Williamson.

South Carolina: John Rutledge; Charles Cotesworth Pinckney; Charles Pinckney; Pierce Butler.

Georgia: William Few; Abraham Baldwin.

New Hampshire: John Langdon; Nicholas Gilman.

Massachusetts: Nathaniel Gorham; Rufus King.

Connecticut: William Samuel Johnson; Roger Sherman.

New York: Alexander Hamilton.

New Jersey: William Livingston; David Brearley; William Paterson; Jonathan Dayton.

Pennsylvania: Benjamin Franklin; Thomas Mifflin; Robert Morris; George Clymer; Thomas FitzSimons; Jared Ingersoll; James Wilson; Gouverneur Morris.

CONSTITUTION OF THE UNITED STATES/The Bill of Rights

The first 10 amendments, known as the Bill of Rights, were proposed on Sept. 25, 1789. They were ratified on Dec. 15, 1791. They were adopted because some states refused to approve the Constitution unless a bill of rights was added.

The amendments protect individuals from various unjust acts of government. Originally, the amendments applied only to the federal government. But the 14th Amendment declares that no state can deprive any person of life, liberty, or property without "due process of law." The Supreme Court has interpreted those words to mean that most of the Bill of Rights applies to the states as well. See BILL OF RIGHTS.

Amendment 1: Freedom of religion, speech, and the press; rights of assembly and petition

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the government for a redress of grievances.

Amendment 2: Right to bear arms

A well-regulated militia, being necessary to the security of a free state, the right of the people to keep and bear arms shall not be infringed.

Amendment 3: Housing of soldiers

No soldier shall, in time of peace be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

Amendment 4: Search and arrest warrants

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

Amendment 5: Rights in criminal cases

No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

Amendment 6: Rights to a fair trial

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the state and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

Amendment 7: Rights in civil cases

In suits at common law, where the value in controversy shall exceed twenty dollars, the right of a trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise re-examined in any court of the United States, than according to the rules of the common law.

Amendment 8: Bails, fines, and punishments

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

Amendment 9: Rights retained by the people

The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

Amendment 10: Powers retained by the states and the people

The powers not delegated to the United States by the Constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people.

Amendment 11: Lawsuits against states

(This amendment was proposed on March 4, 1794, and ratified on Feb. 7, 1795. However, the amendment was not proclaimed until 1798 because of delays that occurred in certifying the ratification.)

The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by citizens of another state, or by citizens or subjects of any foreign state.

Amendment 12: Election of the President and Vice President

(This amendment was proposed on Dec. 9, 1803, and ratified on July 27, 1804.)

The electors shall meet in their respective states and vote by ballot for President and Vice President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the president of the Senate;

the president of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;

the person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, [before the fourth day of March next following,] then the Vice President shall act as President, as in the

case of the death or other constitutional disability of the President.

The person having the greatest number of votes as Vice President, shall be the Vice President, if such number be a majority of the whole number of electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice President; a quorum for the purpose shall consist of two-thirds of the whole number of senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice President of the United States.

Amendment 13: Abolition of slavery

(This amendment was proposed on Jan. 31, 1865, and ratified on Dec. 6, 1865.)

Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Section 2. Congress shall have power to enforce this article by appropriate legislation.

Amendment 14: Civil rights

(This amendment was proposed on June 13, 1866, and ratified on July 9, 1868.)

Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2. Representatives shall be apportioned among the several states according to their respective numbers, counting the whole number of persons in each state, [excluding Indians not taxed]. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, representatives in Congress, the executive and judicial officers of a state, or the members of the legislature thereof, is denied to any of the male inhabitants of such state, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such state.

Section 3. No person shall be a senator or representative in Congress, or elector of President and Vice President, or hold any office, civil or military, under the United States, or under any state, who, having previously taken an oath, as a member of Congress, or as an officer of the

United States, or as a member of any state legislature, or as an executive or judicial officer of any state, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two-thirds of each House, remove such disability.

Section 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any state shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss of emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.

Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

Amendment 15: Black suffrage

(This amendment was proposed on Feb. 26, 1869, and ratified on Feb. 3, 1870.)

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any state on account of race, color, or previous condition of servitude.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment 16: Income taxes

(This amendment was proposed on July 12, 1909, and ratified on Feb. 3, 1913.)

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several states, and without regard to any census or enumeration.

Amendment 17: Direct election of senators

(This amendment was proposed on May 13, 1912, and ratified on April 8, 1913.)

(1) The Senate of the United States shall be composed of two senators from each state, elected by the people thereof for six years; and each senator shall have one vote. The electors in each state shall have the qualifications requisite for electors of the most numerous branch of the state legislatures. (2) When vacancies happen in the representation of any state in the Senate, the executive authority of such state shall issue writs of election to fill such vacancies: Provided, That the legislature of any state may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the legislature may direct.

(3) This amendment shall not be so construed as to affect the election or term of any senator chosen before it becomes valid as part of the Constitution.

Notes: This amendment takes the power of electing senators from the state legislatures and gives it to the people of the states.

Amendment 18: Prohibition of liquor

(This amendment was proposed on Dec. 18, 1917, and ratified on Jan. 16, 1919.)

Section 1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

Section 2. The Congress and the several states shall have concurrent power to enforce this article by appropriate legislation.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several states, as provided in the Constitution, within seven years from the date of the submission hereof to the states by the Congress.

Amendment 19: Woman suffrage

(This amendment was proposed on June 4, 1919, and ratified on Aug. 18, 1920.)

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any state on account of sex.

Section 2. Congress shall have power to enforce this article by appropriate legislation.

Amendment 20: Terms of the President and Congress

(This amendment was proposed on March 2, 1932, and ratified on Jan. 23, 1933.)

Section 1. The terms of the President and Vice President shall end at noon on the 20th day of January, and the terms of senators and representatives at noon on the third day of January, of the year in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

Section 2. The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the third day of January, unless they shall by law appoint a different day.

Section 3. If, at the time fixed for the beginning of the term of the President, the President elect shall have died, the Vice President elect shall become President. If a President shall not have been chosen before the time fixed for the beginning of his term, or if the President elect

shall have failed to qualify, then the Vice President elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President elect nor a Vice President elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice President shall have qualified.

Section 4. The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice President whenever the right of choice shall have devolved upon them.

Section 5. Sections 1 and 2 shall take effect on the 15th day of October following the ratification of this article.

Section 6. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several states within seven years from the date of its submission.

Amendment 21: Repeal of prohibition

(This amendment was proposed on Feb. 20, 1933, and ratified on Dec. 5, 1933.)

Section 1. The eighteenth article of amendment to the Constitution of the United States is hereby repealed.

Section 2. The transportation or importation into any state, territory, or possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by conventions in the several states, as provided in the Constitution, within seven years from the date of the submission hereof to the states by the Congress.

Amendment 22: Limitation of Presidents to two terms

(This amendment was proposed on March 24, 1947, and ratified on Feb. 27, 1951.)

Section 1. No person shall be elected to the office of the President more than twice, and no person who has held the office of President, or acted as President, for more than two years of a term to which some other person was elected President shall be elected to the office of the President more than once. But this article shall not apply to any person holding the office of President when this article was proposed by the Congress, and shall not prevent any person who may be holding the office of President, or acting as President, during the term within which this article becomes operative from holding the office of President or acting as President during the remainder of such term.

Section 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several states within seven years from the day of its submission to the states by the Congress.

Amendment 23: Suffrage in the District of Columbia

(This amendment was proposed on June 16, 1960, and ratified on March 29, 1961.)

Section 1. The district constituting the seat of government of the United States shall appoint in such manner as the Congress may direct: A number of electors of President and Vice President equal to the whole number of senators and representatives in Congress to which the district would be entitled if it were a state, but in no event more than the least populous state; they shall be in addition to those appointed by the states, but they shall be considered, for the purposes of the election of President and Vice President, to be electors appointed by a state; and they shall meet in the district and perform such duties as provided by the twelfth article of amendment.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment 24: Poll taxes

(This amendment was proposed on Aug. 27, 1962, and ratified on Jan. 23, 1964.)

Section 1. The right of citizens of the United States to vote in any primary or other election for President or Vice President, for electors for President or Vice President, or for senator or representative in Congress, shall not be denied or abridged by the United States or any state by reason of failure to pay any poll tax or other tax.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment 25: Presidential disability and succession

(This amendment was proposed on July 6, 1965, and ratified on Feb. 10, 1967.)

Section 1. In case of the removal of the President from office or of his death or resignation, the Vice President shall become President.

Section 2. Whenever there is a vacancy in the office of the Vice President, the President shall nominate a Vice President who shall take office upon confirmation by a majority vote of both houses of Congress.

Section 3. Whenever the President transmits to the president pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that he is unable to discharge the powers and duties of his office, and until he transmits to them a written declaration to the contrary, such powers and duties shall be discharged by the Vice President

as acting President.

Section 4. Whenever the Vice President and majority of either the principal officers of the executive departments or of such other body as Congress may by law provide, transmit to the president pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office, the Vice President shall immediately assume the powers and duties of the office as acting President.

Thereafter, when the President transmits to the president pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that no inability exists, he shall resume the powers and duties of his office unless the Vice President and a majority of either the principal officers of the executive department or of such other body as Congress may by law provide, transmit within four days to the president pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office. Thereupon Congress shall decide the issue, assembling within forty-eight hours for that purpose if not in session. If the Congress, within twenty-one days after receipt of the latter written declaration, or, if Congress is not in session, within twenty-one days after Congress is required to assemble, determines by two-thirds vote of both houses that the President is unable to discharge the powers and duties of his office, the Vice President shall continue to discharge the same as acting President; otherwise, the President shall resume the powers and duties of his office.

Amendment 26: Suffrage for 18-year-olds

(This amendment was proposed on March 23, 1971, and ratified on July 1, 1971.)

Section 1. The right of citizens of the United States, who are eighteen years of age or older, to vote shall not be denied or abridged by the United States or by any state on account of age.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

Amendment 27: Congressional salaries

(This amendment was proposed on Sept. 25, 1789, and ratified on May 7, 1992.)

No law varying the compensation for the services of the senators and representatives shall take effect, until an election of representatives shall have intervened.

Here here! A moment of silence to contemplate, meditate or pray if you wish skirts the edge of constitutionality. There is nothing wrong with it as long as the kids are not pressured to 'pray.' The PC thinking of today expects that all problems can be solved without resorting to violence but that is just not true. We are teaching the youth of today that they can behave violently and have violent outbursts without any reprocussions. The PC'ers just give them a talking to and explain why they have been bad. Until the kids learn that when they act out with violence they will bring violence back on themselves their behavior will never improve. Imagine how hard it would be to teach a child not to touch a hot stove when every time he touched it he felt no pain but instead felt pleasure? It would do no good to tell him that he is destroying his skin. He only cares for the moment as children (and most adults) do. Look at teen smoking, you can tell them that they are hurting their bodies until they are blue in the face but they will continue to do it. Now if smoking brought on an instant punishment of pain nobody would do it. Evolution has given us an excellent deterrent in pain as a negative reinforcement to bad behavior We should use it. Maybe that is the way to clean up the CB band. Route the antenna lead up their ass so when they key up with 1000's of watts they get a little reminder that it's against the rules....

follow the ground wire out of the fusebox that will usually lead to the plumbing service and is grounded there and also usually goes to one or more ground rods pounded into the earth. To merely ground your radio you can ground to any ground in the electrical system but the closer you get to the actual ground rods the much less chance you will pick up any interference from 60Hz AC power and the dirty harmonics put out by electronic equipment such as Computer equipment, microwaves and fax machines. The easiest way to ground against the static would be right at the electrical outlet. IF it is a grounded outlet and your power supply has a grounded cord all you have to do is jumper the powersupply chassis and the radio chassis. If not you can just change the plug on your powersupply to a 3 prong grounding plug and run up a ground wire (#14 gauge would be sufficient to reference the chassis against static charges) up to the radio chassis. If the receptacle is not a grounded type, all is not lost as most older non-grounded systems were run in metal-clad cable (BX) and that will be a sufficient ground (less than 2 ohm) to ground against static charges. get a ground clip at your hardware store and clip it onto the electrical box being careful to turn off the power first at the outlet before taking it off. Hopefully this will not give you any interference with your reception. IF it does, the only good answer would be to go straight to the grounding electrode of the electrical service found by the electric meter (ground rod).

Depends which type of resistance you are talking about.

DC Resistance - nearly Zero.
Radiation Resistance - ~50 Ohms.

Bob.

Copied from another hebetic posting by "Hightower03"

>I haven't laughed this hard at someone in a long time. Thank you..
>you made my day..

That's great news! And, your very welcome. I've always tried to do my best to help the disadvantaged in our society, and I'm glad our meeting benefited you somewhat. The next time you feel down, think of me.

I had two guys 'quick keying' on a local HAM repeater

Suggest to the control op or the club to add a 1/2 second pause
followed by a courtesy tone.

Well that's a shock the what would you put a price on a 2510 or 2950 they don't have the same power and one will not split intill you change the chip so I think that you would say around $50.00 each?? If that's the case then I might as well keep the radio and just get a bigger power supply
thanks..

Try setting the reflector on the ground and then point the antenna straight up.You could be in a high RF area causing false readings but I think if you set the resonant freq the SWR will go down when the thing is at its permanant height.

You should have read the next paragraph Bill, also, I'm pretty sure they always show up with a Marshall.

Q: The FCC Agent standing at my door does not have a search warrant, so I don't have to let him in, right?

A: Wrong. Search warrants are needed for entry involving criminal matters.
One of the requirements as a licensee, or
non-licensee subject to the Commission's Rules, is to allow inspection of
your radio equipment by FCC personnel. Whether you
operate an amateur station or any other radio device, your authorization
from the Commission comes with the obligation to
allow inspection. Even radio stations licensed under a "blanket" rule or
approval, such as Citizen's Band (CB) Radio, are
subject to the Commission's inspection requirement.

Actually, there IS a pause, and a tone. In fact, there are some '*'
around here that the one repeater sponsored by a club I belong to
has a 'timeout' that counts how many times it's been triggered. Once
it's been triggered 3 times, the repeater shuts off, period, until
the idle timer expires, which I think is 15 minutes. It's caused
some of the 'longwinded' people to move elsewhere. EVERYONE
hits it now and then, but some people never learn... And they
moan loudly that the repeater s*cks, but they don't wonder that
maybe they are the reason.

As to the original repeater in question ...
Unfortunately, there are no 'penalties' for violating it's intended
operations. Not that a repeater that 'goes down' would help my in
an emergency situation....
